CHAPTER 1

MANAGEMENT OF SPORTING EVENTS

P. 24-29

A. Objective Type/ Multiple-Choice Questions

I. Multiple-Choice Questions:

- 1. Which of the following is a part of sports management?
 - (a) Planning
 - (b) Directing and Organising
 - (c) Staffing and Controlling
 - (d) All of these
- Ans. (d) All of these
 - Identify which one of these is not the objective of planning? (CBSE SP 2021 Term 1)
 - (a) Enhance creativity
 - (b) Increase efficiency
 - (c) Reduce chances of mistake
 - (d) Facilitates poor coordination
- Ans. (d) Facilitates poor coordination
 - 3. What is the meaning of staffing?
 - (a) Interviewing staff
 - (b) Selecting and recruiting staff
 - (c) Promoting staff
 - (d) All of these
- Ans. (b) Selecting and recruiting staff
 - **4.** Which of the following are salient aspects of a tournament?
 - (a) Nurturing social skills
 - (b) Means of recreation
 - (c) Promoting national and international integration
 - (d) All of these
- Ans. (d) All of these
 - 5. What are the types of league tournaments?
 - (a) Single and Double league tournament
 - (b) Single and Mixed double league tournament
 - (c) Double and Combination league tournament
 - (d) Simple and Complex league tournament
- Ans. (a) Single and Double league tournament
 - 6. Which fixture is also known as 'Berger system'? (CBSE SP 2021 Term 1)

- (a) Knockout fixture
- (b) Round Robin fixture
- (c) Combination fixture
- (d) Challenge tournament
- Ans. (b) Round Robin fixture
 - **7.** What is the formula to calculate the number of matches in a single league tournament?

(CBSE 2020)

- (a) N 1 (b) N(N 1)(c) N(N - 1)/2 (d) 2N - N
- **Ans.** (c) N(N-1)/2
 - 8. Which formula is used to find out the number of matches in a double league tournament?

(a) N × N	(b) N (N−1)
(c) (N − 1)	(d) $N \times N \times N$

- **Ans.** (b) N(N−1)
 - **9.** What is the formula to find the number of matches in a knockout tournament?
 - (a) N (b) N (N 1)
 - (c) (N-1) (d) (N+1)
- **Ans.** (c) (N − 1)
 - **10.** The formula for determining the number of rounds in a single league fixture when the number of teams is even? (CBSE SP 2021 Term 1)
 - (a) N (b) (N-1)/2
 - (c) N-1 (d) N(N-1)/2
- **Ans.** (c) N 1
- 11. What is the formula to divide an odd number of teams in the upper half for a knockout fixture? (CBSE SP 2021 Term 1)

(a) (N + 1)/2 (b) (N - 1)/2(c) N(N - 1)/2 (d) N(N + 1)/2

- Ans. (a) (N + 1)/2
 - 12. Formula for determining the number of bye in the lower half of a knockout fixture when number of byes are odd? (CBSE SP 2021 Term 1)
 - (a) (NB + 1)/2 (b) (NB 1)/2
 - (c) NB /2 (d) NB + 1
- Ans. (a) (NB + 1)/2
 - 13. How many byes will be given if there are 17 teams? (CBSE SP 2022)
 - (a) 1 (b) 8
 - (c) 15 (d) 12
- **Ans.** (c) 15

- 14. How many matches will be played in the knockout tournaments first round if there are 15 teams? (CBSE SP 2022)
 - (a) 8 (b) 7
 - (c) 5 (d) 6

Ans. (b) 7

- 15. It is a process/procedure of shuffling the position of good teams so that they don't meet each other in an early stage of the competition and spectator interest is kept alive till finals. What is the name of this process?
 - (b) Seeding (a) Intramural
 - (d) Extramural (c) Fixture
- Ans. (b) Seeding
 - 16. Which one of the following is an advantage of Round Robin tournament? (CBSE 2020)
 - (a) Time consuming
 - (b) More number of officials
 - (c) Expensive
 - (d) Decides the real strong team
- Ans. (d) Decides the real strong team
 - 17. The total number of matches in a knock out tournament of 34 teams are (CBSE 2020)

(a) 31	(b) 32
(c) 33	(d) 35

- Ans. (c) 33
 - 18. How many rounds will be played if the number of teams are 29 in the knockout fixture?

(CBSE SP 2021 Term 1)

(a)	5		(b)	6

- (c) 7 (d) 3
- Ans. (d) 3
- 19. Which sports competition is organised within the school itself?
 - (a) Extramural (b) Intramural
 - (d) None of these (c) Inter-state
- Ans. (b) Intramural
- 20. Which of these is not one of the methods used for fixtures in League or Round Robin tournaments?
 - (a) Cyclic method (b) Spiral method
 - (c) Staircase method (d) Tabular method
- Ans. (b) Spiral method
- 21. Consolation tournaments are a part of which type of fixture? (CBSE SP 2021 Term 1)

- (a) Knockout
- (c) Combination
- Ans. (a) Knockout

II. Match the following:

List I – Category

- (i) Technical committee
- (iii) Finance committee

(iii) Transport

committee

(3) To deals with money and expenditure

CBQ

(iv) First aid (4) To provide medical facilities committee

Select the correct set of options:

- (a) (i)–(2), (ii)–(3), (iii)–(1), (iv)–(4)
- (b) (i)-(3), (ii)-(2), (iii)-(1), (iv)-(4)
- (c) (i)-(2), (ii)-(3), (iii)-(4), (iv)-(1)
- (d) (i)-(4), (ii)-(3), (iii)-(1), (iv)-(2)
- **Ans.** (a) (i)–(2), (ii)–(3), (iii)–(1), (iv)–(4)
- III. Assertion-Reason Type Questions:

Given below are the two statements labelled Assertion (A) and Reason (R).

- 1. A: Knockout tournaments save cost and time and make each match intensive.
 - R: In this type of format, players or teams have to consistently give their best performance to avoid elimination.
- 2. A: Planning is the foremost function in sports.
 - R: Planning gives a view of future course of action. (CBSE SP 2020)

In the context of the two statements given above, which one of the following is correct?

- (a) Both (A) and (R) are true and (R) is the correct explanation of (A).
- (b) Both (A) and (R) are true but (R) is not the correct explanation of (A).
- (c) (A) is true, but (R) is false.
- (d) (A) is false, but (R) is true.
- Ans. 1. (a) Both (A) and (R) are true and (R) is the correct explanation of (A).
 - 2. (a) Both (A) and (R) are true and (R) is the correct explanation of (A).

(d) None of these

List II - Name

facility

(1) To provide shifting

(2) To resolve dispute

4

IV. Data-Based Questions:

CBQ

Given below is the tournament fixture procedure of a volleyball national competition.

On the basis of the above data, answer the following questions:

- 1. In the fixture shown above, which of the following is not needed?
 - (a) Byes (b) Knockout
 - (c) Seeding (d) Consolation
- 2. In League tournaments, the winner is decided by
 - (a) British method (b) American Method
 - (c) No of matches won (d) Both (a) and (b)
- **3.** Which of the following is not a league fixture procedure?
 - (a) Ladder method (b) Staircase method
 - (c) Cyclic method (d) Tabular method
- Ans. 1. (a) Byes
 - 2. (a) British method
 - 3. (a) Ladder method
- V. Picture-Based Questions:

CBQ

Your school is organising annual sports day. To make this event successful, write the names of any four important committees with one responsibility.

Ans. i. Publicity Committee: Advertise the event

- ii. Finance Committee: To deal with money and expenditure
- iii. Reception Committee: To welcome chief guest and players
- iv. Announcement Committee: Make announcements regarding opening and closing ceremony.

VI. Case-Based Questions:

- Rohan and Satish organised a volleyball tournament on Knockout basis. They found that the spectators were losing interest in the tournament because two good teams were out of the tournament as they were defeated in the beginning. Which provision could have avoided this kind of situation? (CBSE SP 2021 Term 1)
 - (a) Bye (b) Seeding
 - (c) Pools (d) Halves

Ans. (b) Seeding

- 2. ABC School is one of the reputed schools in their location for the number of sports facilities it provides to its stakeholders. Keeping that in consideration CBSE sports cell has given them the responsibility of conducting CBSE Football cluster. Total 35 teams have sent their entry for participation in the tournament. Due to the large number of teams willing to participate, the school should conduct the competition by which fixture? (CBSE SP 2021 Term 1)
 - (a) League (b) Knockout
 - (c) Staircase (d) Challenge
- Ans. (b) Knockout
 - **3.** A fixture has to be prepared for a knockout tournament between 15 teams. On the basis of the case given, answer the following questions:
 - (a) How many teams will the lower half have?
 - (b) How many byes will the upper half have?
 - (c) In case of byes, the first bye goes to the _____ half.
- Ans. (a) 7, (b) 0, (c) last, lower
 - 4. On the basis of fixture given below, answer the following questions: (CBSE SP 2022) Teams I R II R III R IV R V R

- (a) Total number of matches in second round are
- (b) What is the formula for calculating the total number of matches?
- (c) The fourth round in this case can also be called as
- (d) What is the formula for calculating the number of byes?

OR

The formula for calculating number of rounds is

Ans. (a) 8, (b) N - 1, (c) Semi-final, (d) $2^n - N$

B. Very Short Answer Type Questions

- 1. What do you mean by planning? (CBSE 2016)
- Ans. Planning is a course of action in order to reach a definite goal.
 - 2. What do you mean by a tournament?
- Ans. A tournament is a type of contest in which several players participate and defeat opponents in various rounds to get to the final match and win it.
 - Round Robin tournament is of two types. Name them and give one major difference between them. (CBSE 2017)
- Ans. Single league tournament and double league tournament. In single league tournament, each team/player plays against every other participant once. In double league tournament, each team/ player plays against every other participant twice.
 - 4. Fixtures are the schedule, fixed for the matches. What is a bye? (CBSE 2017)
- **Ans.** A bye is a dummy team that participates in the second round to even out the number. The number of byes in a fixture is the difference between the number of participants and the next highest number which is the power of 2.
 - **5.** What is the difference between single league tournament and double league tournament?
- Ans. In single league tournament, each team/player plays against every other participant once. In double league tournament, each team/player plays against every other participant twice.
 - 6. What is seeding? (CBSE 2011, 2012)
- Ans. Seeding is a tactic used in sports events in which specific teams are sorted into a bracket in such a way that the strongest teams meet later in the tournament.

- 7. Write the formula for giving a bye. (CBSE 2016)
- Ans. The number of byes in a fixture is the difference between the number of participants and the next highest number which is the power of 2. If there are two very strong teams, one will be placed on the top of the upper half and the other at the bottom of the lower half. If there are four strong teams, then the third will be placed on the top of the lower half, and the fourth at the bottom of the upper half. This usually works if the number of teams to be seeded are the power of 2. Save for seeded teams, the rest are divided by drawing lots.
 - 8. What is a consolation tournament?
- Ans. A consolation tournament is held to give second chance to defeated players in knockout tournaments.

C. Short Answer Type-I Questions

- 1. Define sports management.
- Ans. Sports management can be defined as the coordination of resources, technologies, processes, personnel and situational contingencies for the efficient production and exchange of sports services.
 - **2.** What is a short-term planning? Explain giving a suitable example.
- **Ans.** Short-term planning is setting goals that the organisation hopes to achieve within the next few months to a year. For example, an athletic shoe firm could aim to buy enough inventory of a specific model of shoe so that its salesperson can stock suppliers with enough shoes to match customer demand for the future year.
 - 3. State the responsibilities of finance committee.
- Ans. Finance Committee is primarily related to financial management for the sport event. It prepares budget to purchase equipment, medals, etc. before the sport event. During the event, the finance committee checks the cash flow, payments, remuneration of officials, etc. This committee settles all the bills, prepares report, etc. once the event is over.
 - **4.** What are the different types of league tournaments?
- Ans. There are two types of league tournament. Single league tournament, in which each team player plays against every other participant once or double league tournament, in which each team/player plays against every other participant twice.

- 5. Write any two advantages of league tournament.
- Ans. Advantages of League or Round Robin Tournaments
 - Leagues give each participant a chance to prove itself against every opponent involved in the tournament. As such, there is no question of missed opportunities. It is a fair way of determining the best and most consistent competitor. Many footballs and cricket tournaments use this approach.
 - There is no such thing as getting lucky in round robins. Even if a team defeats another in the first round due to sheer luck, it will still have to outperform the others.
 - 6. Define the term fixture. (CBSE 2018)
- **Ans.** Fixture is a sport event or its date. Further, it is a process of arranging the team in systematic order in various groups for competitive fights for physical activity.
 - 7. How are byes fixed in a knockout tournament?
- Ans. First of all, lots will be drawn and the total number of teams will be divided into 2 two halves. Following that, byes will be fixed in the following manner:
 - The first bye goes to the last team of the lower half, and the second to the first team of the upper half.
 - The third bye goes to the first team of the lower half, and the fourth to the last team of the upper half.
 - This sequence will be followed while assigning the next bye or byes.
 - 8. Explain briefly the cyclic method.
- Ans. Cyclic method: Cyclic method has different applications for even and odd numbers of teams. In the former case, the 1st team is placed at the top of the right hand side. The remaining team numbers are put in ascending order consecutively and then upward on the left side. In the latter, the bye is fixed on the top of the right side, and then followed by the rest of the procedure. Teams are rotated from right to left.

If N (number of teams) is even, the number of

rounds will be (N - 1).

D. Short Answer Type-II Questions

1. Create a mind map depicting the functions of sports management.

Ans.

- 2. What is controlling in sports management?
- Ans. Controlling comprises all the processes created by leaders to monitor success. Controlling entails ensuring that performance adheres to established guidelines. Controlling consists of three steps:
 - Setting performance criteria.
 - Comparing actual performance to standards.
 - Taking remedial action as needed.
 - 3. What is directing in sports management?
- Ans. Directing is the activity element of the management process. It is commonly referred to as the directing or leading function. This is the step where everything takes place. The sports manager is responsible for coordinating the actions of the personnel in order to achieve corporate goals. The manager's responsibilities as a leader include delegating, communicating, managing conflict, managing change, and inspiring staff. The manager employs a variety of talents to carry out these tasks, which are detailed in the following section of this chapter.
 - 4. List down the important committees during a tournament. (CBSE 2011)
- Ans. Publicity Committee, Boarding and Lodging Committee, Transport Committee, Grounds Equipment Committee, Refreshment and and Entertainment Committee. Reception Committee. Decoration and Ceremony Committees Committee, on Entries and Programmes, etc. are various important committees during a tournament.
 - 5. What is the task of the decoration and ceremony committees?

- **Ans.** Decoration and Ceremony Committees work in tandem with the refreshment and entertainment committee and the reception committee to make the ceremonies vibrant and well coordinated. They decorate the viewing areas and stages so that the venue looks attractive. This committee is also charged with arranging for certificates, medals and trophies.
 - Your school is organising 'Run for Unity'. Explain the responsibilities of accreditation, technical and finance committee. (CBSE 2016)
- Ans. Accreditation committee: This committee registers all the participants with an operational role. The production, distribution and validation of passes is the duty of this committee.
 - **Technical committee:** Technical committee looks after the technical aspects of the tournament. It ensures that the field is safe for play for all participants. It ensures the quality of equipment.
 - Finance committee: This committee prepares the budget of the tournament and maintains every expenditure related to tournament.
 - 7. Give two reasons why tournaments are important.
- Ans. The purpose of a tournament is to establish the one team or player who has outperformed the rest. Tournaments introduce the youth to stress that is different from the one they face in the classroom; on the field, their alertness of mind, physical strength, coordination between the mind and the body, and natural and acquired reflexes are all put to test in front of spectators.
 - 8. What are the three types of tournaments?
- Ans. Three types of tournaments are knockout; league or round Robin and combination.
 - **9.** League tournament is a better way to judge the best team of the tournament. Comment.

(CBSE 2020)

Ans. League or Round Robin tournament, as opposed to knockouts, allows each team or player to compete against every other participant in the tournament. A league tournament is a better way to determine the best team in a tournament because each team has the most opportunities to show its efficiency. Teams and players have a lot of chances to show and improve her/his performance. The teams which score more points are eligible for next matches in the tournament.

- Leagues give each participant a chance to prove itself against every opponent involved in the tournament. As such, there is no question of missed opportunities. It is a fair way of determining the best and most consistent competitor. Many footballs and cricket tournaments use this approach.
- There is no such thing as getting lucky in round robins. Even if a team defeats another in the first round due to sheer luck, it will still have to outperform the others.
- Since leagues accurately measure the performances of a particular team or player, their strengths and weaknesses can be evaluated with greater certainty.
- League tournaments tend to be popular and also earn a lot of revenue. Fans get to cheer their players/teams through a greater number of matches. (any three)
- **10.** What is the difference between round robin and knockout?

Ans.

	Laggua ar round Dahin
In knockout tournaments,	League or round Robin
the defeated team or	tournament, as opposed to
player is eliminated with	knockouts, allows each team
no scope of participating	or player to compete against
further.	every other participant in
As for the winner, they	the tournament. This can be
continue competing	either of two variations: single
against other opponents	league tournament, in which
until they eventually lose	each team/ player plays
or win the tournament.	against every other participant
	once or double league
	tournament, in which each
	team/player plays against
	every other participant twice.

- **11.** What types of statistics are used while drawing fixtures for knockouts?
- **Ans.** For knockouts, the total number of matches to be played in a single tournament is determined by the following formula:

where N is the number of teams/individual players.

So, if in a tournament there are 8 participants, then the total number of matches played will be 7. In the first phase, there will be 4 matches (1 against 1); in the second, the four winners will advance further to decide the two finalists, so there will be 2 matches. Counting the final match, there are 7 in total, as derived from the formula. Lots are drawn to decide the pairs of competitors.

- Define bye. Explain the rules of giving bye with the help of an example. (CBSE SP 2022)
- **Ans. Bye:** When a team or a player does not face an opponent in the primary round due to allotment of draws, random lottery system is used to give a bye to any participating team/player. In a tournament, the organising committee assigns byes to the teams due to many reasons. They are as follows:
 - Uneven distribution of teams in tournament
 - Keeping previous winners in different pool to create balanced competition
 - Avoiding one particular team from playing more matches on a single day than the other teams.

First of all, lots will be drawn and the total number of teams will be divided into 2 two halves. Following that, byes will be fixed in the following manner:

- The first bye goes to the last team of the lower half, and the second to the first team of the upper half.
- The third bye goes to the first team of the lower half, and the fourth to the last team of the upper half.
- This sequence will be followed while assigning the next bye or byes.
- **13.** How many byes will be allotted in a knockout in which 15 teams are participating?
- Ans. Number of Bye = (16 15) = 1 (refer to pages 17–18 of textbook)
- **14.** Draw a fixture of 11 football teams participating in a tournament on the basis of a knockout.

(CBSE 2016)

- Ans. Refer to pages 18-20 of the textbook.
 - 15. How many rounds will be there in a knockout of (i) 10 teams and (ii) 13 teams?
- Ans. (i) When the number of participating teams or players (N) is the power of two (i.e. 2, 4, 8, 16, 32, and so on), then number of rounds will be the number of 2's making up N. For instance, when

N = 10, number of rounds will be

 $2 \times 2 \times 2 \times 2 =$ three 4s = 4,

(ii) N = 13, number of rounds will be

 $2 \times 2 \times 2 \times 2 =$ four 2s = 4.

When N is not the power of 2, the number of rounds will be based on the next highest power of 2.

16. Draw a knockout fixture of 24 teams.

(CBSE SP 2016)

- Ans. Refer to pages 18-20 of the textbook. Follow the same method to draw a fixture of 24 teams.
 - **17.** Differentiate between the cyclic method and staircase method.
- Ans. Cyclic method: Cyclic method has different applications for even and odd numbers of teams. In the former case, the 1st team is placed at the top of the right hand side. The remaining team numbers are put in ascending order consecutively and then upward on the left side. In the latter, the bye is fixed on the top of the right side, and then followed by the rest of the procedure. Teams are rotated from right to left.

If N (number of teams) is even, the number of rounds will be (N-1).

Staircase method: In this type, fixtures are arranged in such a way that it resembles a ladder or a staircase. There is no need to give byes to any team as there is no issue of odd or even number of teams.

E. Long Answer Type Questions

- 1. What are the various functions of sports management?
- Ans. Functions of Sports Management
 - Planning: Planning is a goal-oriented activity. It gives a view of future course of action. The planning role entails identifying organisational goals and selecting the best methods for achieving these goals.
 - Organising: After planning, the sports manager then takes up the task of organising. The organising function kickstarts the implementation of plans. The manager selects which sorts of duties must be completed and who will be accountable for doing them as part of the organisational role.
 - Staffing: Staffing can begin after the organisational chart has been created and the position qualifications have been determined. The responsibility for the roles in the organisational structure is determined by staffing. Staffing is the process of effectively recruiting and selecting people to fill roles in a company. Position qualifications obtained during the organising function are used in this situation.
 - Directing: This is the activity element of the management process. It is commonly

referred to as the directing or leading function. This is the step where everything takes place. The sports manager is responsible for coordinating the actions of the personnel in order to achieve corporate goals. The manager's responsibilities as a leader include delegating, communicating, managing conflict, managing change, and inspiring staff. The manager employs a variety of talents to carry out these tasks, which are detailed in the following section of this chapter.

- Controlling: Controlling comprises all the processes created by leaders to monitor success. Controlling entails ensuring that performance adheres to established guidelines.
- **2.** Describe how various planning committees function in sports events.
- Ans. Various planning committees function in the following manner in a sports event.
 - Publicity Committee: The publicity committee completes this preparation before the games. During the games they maintain the interest level for the games with proper advertisement. They also coordinate with the media for coverage during and after the games.
 - Boarding and lodging committee: This committee takes care of accommodation and meals for the players, officials, and other members involved in the event. Before the games, they confirm the bookings. Once the tournament has started, they keep track of all boarding and lodgings, switches between departures and new arrivals, etc.
 - Transport committee: The transport committee handles transportation facilities for the players, officials, etc. They arrange for buses and other vehicles to take the players and officials to the venue of the games from the places where they are staying.
 - Grounds and equipment committee: This committee has the responsibility of ensuring that the grounds, fields, courts, etc. are in top condition. They also check the equipment and other gears to be used in the games to ensure that no mishap occurs and that plenty of equipment is available for all the players.
 - Refreshment and entertainment committee: They supply drinks and refreshments to the guests, players, officials and other invitees.

The entertainment programmes, such as opening song, closing dance, etc. are also arranged by this committee in advance.

- Reception committee: The reception committee welcomes the guests, players, officials, audiences, etc. during the opening and closing ceremonies.
- Decoration and ceremony committee: They decorate the viewing areas and stages so that the venue looks attractive. This committee is also charged with arranging for certificates, medals and trophies.
- Committees on entries and programmes: The committee on entries and programmes are tasked with sending out entry forms to various institutions early so that the latter can send in their applications on time. The committee then allots slots to the competitors, prepares fixtures if required, build a clear-cut schedule of the programmes and prints it so that it may be distributed to all involved parties.
- Committee for officials: There are many officials involved in a sporting event: judges, referees, umpires, recorders, starters, time keepers, lap scorers, clerks of the course, announcers, commentators, etc. The committee for officials selects and manages them for smooth functioning of the sports event.
- Announcement committee: The announcement committee is responsible for making announcements during the opening and closing ceremonies, games, important information like when an event is going to take place or changes in schedules, names of officials and players, running commentaries, etc.
- First aid committee: One of the most important committees in a sports event, the first aid committee works under the supervision of a medical expert. It provides first aid to injured players and ensures that they receive advanced medical attention if the need arises. The first aid team makes all necessary arrangements before the commencement of the sports event.
- Explain pre-, during and post-game responsibilities of officials of various committees for organising a sports tournament smoothly. (CBSE 2020)
- Ans. Pre-, during and post-game responsibilities of officials of various committees are as follows:

Technical Committee: Pre-sports event/ tournament: Before the event, it is the job of the Technical Committee to put forward a requisition to purchase equipment, invitation and confirmation from officials to conduct sports event, cleaning and layout of the fields, arrangement of equipment and stationery, preparation of fixtures, rules and regulation of the sports event.

During sports event/tournament: While the tournament is in progress, the Technical Committee is responsible for conducting matches, presence of the jury, cleaning and layout of the fields, collection of score sheets and other related papers from officials, preparation of merit list, etc.

Post sports event/ tournament: After the event is over, the Technical Committee arranges for the cleaning and layout of the fields, maintenance of the field, and placing of all equipment back to store.

Finance Committee: Pre sports event/ tournament: Before the event, It is the responsibility of Finance Committee to prepare the budget, to purchase sports equipment, stationery, medals, certificates, and other requirements as desired by the other committees, as well as preparing and finalizing the MoU with sponsors.

During sports event/ tournament: During the course of the event, the Finance Committee keeps a check on the outflow and inflow of finances including payment and remuneration to officials.

Post sports event/ tournament: Once the event is over, the Finance Committee examines all records related to settlement of the bills and accounts, and prepares the financial report. Refer to textbook for detail.

4. What is a knockout tournament? Explain different types of knockout tournaments. Draw a fixture of 21 teams on a knockout basis.

(CBSE 2012, 2015)

Ans. In boxing, a match is finished when an opponent is knocked down and unable to rise and return to the game within a certain time limit. This is called knockout. The concept of knockout tournaments is somewhat similar. In this type of tournament, the defeated team or player is eliminated with no scope of participating further. As for the winner, they continue competing against other opponents until they eventually lose or win the tournament.

Single knockout tournament, consolation tournament and double knockout tournament are different types of knockout tournament.

See page 19 of the textbook for a fixture of 21 teams on a knockout basis.

5. What is a league or round robin? Draw a fixture for 6 teams using round robin method.

(CBSE 2012)

- Ans. League or Round Robin tournament, as opposed to knockouts, allows each team or player to compete against every other participant in the tournament. This can be either of two variations: single league tournament, in which each team/ player plays against every other participant once or double league tournament, in which each team/player plays against every other participant twice.
 - *Example*. Draw a fixture of 6 teams on a league basis according to the cyclic method.

Solution. Total number of teams

$$= \frac{\frac{2}{2}}{\frac{6 \times 5}{2}} = \frac{30}{2} = 15 \text{ matches}$$

Number of rounds
=
$$N - 1 = 6 - 1 = 5$$
 rounds

6. Draw a fixture of 12 teams on a league basis according to the staircase method. How will you decide a winner in league tournament?

(CBSE 2019)

Ans. Fixture of 12 Team on the basis of staircase method

The following way is used to decide a winner:

- (i) The team that wins the match gets = 2 points.
- (ii) The team that loses the match gets= 0 point.
- (iii) If match draws then each team gets = 1 point.

After the tournament, all the teams are awarded the score as per their performance and the team which scores maximum is declared winner.

If the points of two teams are equal, then a match is held again between both teams.

- Mention all calculations and steps involved to draw a knockout fixture of 19 teams, where 4 teams are to be seeded. (CBSE 2018)
- Ans. Total no. of teams = 19 (N = 19)No. of matches = (N - 1) = 19 - 1 = 18No. of teams in upper half $= \frac{(N + 1)}{2} = 10$ No. of teams in lower half $= \frac{(N - 1)}{2} = 9$ Total no. of byes (NB) = next power of 2 - N = 32 - 19 = 13No. of byes in upper half $= \frac{NB - 1}{2} = 6$ No. of byes in lower half $= \frac{NB + 1}{2} = 7$ Seeding - 2 teams in upper half with byes 2 teams in lower half with byes

8. Draw a league fixture of 16 teams.

Ans. Number of teams = 16

Number of matches = N - 1 = 16 - 1 = 15Number of teams in upper half = N/2 = 16/2 = 8Number of teams in lower half = N/2 = 16/2 = 8Number of byes = Next nearest power of 2 - Number of teams

$$= 16 - 16 = 0$$

Number of rounds = 4

For fixture, refer to pages 18-20 of the textbook.

9. Being sports captain of the school, prepare five important committees with their responsibilities to conduct one day Run for Health Race.

(CBSE 2015)

- Ans. (i) **Publicity committee:** The publicity committee completes this preparation before the games. During the games they maintain the interest level for the games with proper advertisement. They also coordinate with the media for coverage during and after the games.
 - (ii) Boarding and lodging committee: The boarding and lodging committee takes care of accommodation and meals for the players, officials, and other members involved in the event. Before the games, they confirm the bookings. Once the tournament has started, they keep track of all boarding and lodgings, switches between departures and new arrivals, etc. They ensure that the guests are taken care of wherever they are staying. After the event is over, they are incharge of settling the bills and other fees incurred by the guests during their stay.
 - (iii) Transport committee: The transport committee handles transportation facilities for the players, officials, etc. They arrange for buses and other vehicles to take the players and officials to the venue of the games from the places where they are staying. Though preparations for logistics begin before the games start, it is during the tournament that the transport committee is at its busiest.
 - (iv) Grounds and equipment committee: This committee has the responsibility of ensuring that the grounds, fields, courts, etc. are in top condition. They also check the equipment and other gears to be used in the games to ensure that no mishap occurs and that

plenty of equipment is available for all the players. Their responsibilities start before the games. During the games, they have to maintain the grounds and equipment, and once the competition is over, they ensure that everything is in place and damaged equipment and areas reported for replacements or repairs.

 (v) Refreshment and entertainment committee: They are different from the boarding and lodging committee. They supply drinks and refreshments to the guests, players, officials and other invitees. The entertainment programmes, such as opening song, closing dance, etc. are also arranged by this committee in advance.

F. Value -Based Question

Sports management is a process of setting objective and deciding how to accomplish them. It is the most important task of all administration. Like, there is a new school in our town. The school has a huge campus, so the school authorities have decided to introduce some sports that includes taekwondo, martial arts, archery, boxing, swimming, etc. The school has made it mandatory for each student. So that every student can participate in the competitions organised by the school. The idea of introducing such sports is appreciated by the parents of the students. Such sports help students to expand their knowledge and capabilities. These sports help to build confidence and provide healthy recreation.

Answer the following questions based on the above passage:

- 1. What do you understand by sports management?
- 2. What is the importance of sports and games for the students?
- **3.** What are the values shown by the parents of the students in the school?
- Ans. 1. Sports management can be defined as the coordination of resources, technologies, processes, personnel and situational contingencies for the efficient production and exchange of sports services.
 - 2. Playing various sports helps them teach life skills such as teamwork, leadership, accountability, patience, and self-confidence and prepares them to face life challenges. Students get a chance to work on their physical and mental abilities to achieve goals in their life.
 - 3. Coordination, positive attitude, decisionmaking, etc.

CHAPTER 2

CHILDREN AND WOMEN IN SPORTS

P. 44–49

A. Objective Type/Multiple-Choice Questions

I. Multiple-Choice Questions:

- 1. Which one of the following is not a cause of bad posture?
 - (a) Poor diet
 - (b) Daily exercise
 - (c) Poorly designed furniture
 - (d) Carrying heavy load
- Ans. (a) Poor diet
 - 2. The deformity shown in figure is caused due to
 - (a) malnutrition.
 - (b) illness.
 - (c) rickets.
 - (d) all of these.
- Ans. (d) all of these.
 - 3. Which of the following is not a cause of lordosis?
 - (a) Imbalanced diet (b) Cancer
 - (c) Obesity
- Ans. (b) Cancer
 - 4. Which of these asanas is suggested for relief from lordosis?
 - (a) Chakrasana (b) Vajrasana
 - (c) Halasana (d) Matsyasana
- Ans. (c) Halasana
 - **5.** Which of the following are counted amongst the commonly known postural deformities?
 - (a) Spinal curvature
 - (b) Flat foot
 - (c) Bow legs
 - (d) All of these
- Ans. (d) All of these
 - 6. Running on an uneven terrain can cause
 - (a) lordosis. (b) kyphosis.
 - (c) scoliosis. (d) none of these.
- Ans. (c) scoliosis.
 - 7. Which yogic poses help in correcting round shoulders?
 - (a) Bhujangasana and Ustrasana
 - (b) Gomukhasana and Padmasana

- (c) Ardh Matsyendrasana and Garudasana
- (d) Chakrasana and Dhanurasana
- Ans. (a) Bhujangasana and Ustrasana
 - 8. In which postural deformity is there an abnormal lateral curvature of the spine?
 - (a) Kyphosis (b) Lordosis
 - (c) Fibrosis (d) Scoliosis
- Ans. (d) Scoliosis
 - 9. What is the name of the postural deformity caused due to increase in the curve at the lumbar region? (CBSE SP 2021 Term 1)
 - (a) Knock knees (b) Bow legs
 - (c) Kyphosis (d) Lordosis
- Ans. (c) Kyphosis
 - Which postural deformity has convexities right or left? (CBSE SP 2021 Term 1)
 - (b) Knock knees
 - (c) Kyphosis (d) Scoliosis
- Ans. (d) Scoliosis

(a) Flat foot

- Which postural deformity is related to posterior curve of the spine? (CBSE SP 2021 Term 1)
 - (a) Scoliosis (b) Kyphosis
 - (c) Lordosis (d) Knock knees
- Ans. (b) Kyphosis
 - 12. Which exercise should be done to cure this deformity? (CBSE SP 2021 Term 1)
 - (a) Skipping
 - (b) Walking on heels
 - (c) Both (a) and (b)
 - (d) Hanging on horizontal bar
- Ans. (c) Both (a) and (b
 - 13. Scoliosis is a postural deformity related with
 - (a) foot.
 - (b) leg.
 - (c) vertebral column.
 - (d) hand.
- Ans. (c) vertebral column.
 - 14. Menarche is defined as the
 - (a) ending of menstrual period in women.
 - (b) beginning of menstrual period in women.
 - (c) time of pregnancy.
 - (d) beginning of pregnancy. (CBSE 2020)
- Ans. (b) beginning of menstrual period in women.

(CBSE 2020)

Select the correct set of options:

- (a) (i)–(1), (ii)–(3), (iii)–(2), (iv)–(4)
- (b) (i)-(1), (ii)-(4), (iii)-(3), (iv)-(2)
- (c) (i)-(1), (ii)-(3), (iii)-(4), (iv)-(2)
- (d) (i)-(4), (ii)-(2), (iii)-(3), (iv)-(1)
- **Ans.** (b) (i)–(1), (ii)–(4), (iii)–(3), (iv)–(2)

- III. Assertion-Reason Type Questions: Given below are the two statements labelled Assertion (A) and Reason (R).
 - 1. A: Lordosis is the excessive inward curvature of spine in the lower back.
 - R: Halasana and toe touching exercises are helpful in correcting lordosis.
 - 2. A: Physical activities as corrective measure are very effective in functional deformity in comparison to structural deformity.
 - R: Muscles and ligaments are affected in functional deformity. (CBSE SP 2021 Term 1)

In the context of the two statements given above, which one of the following is correct?

- (a) Both (A) and (R) are true and (R) is the correct explanation of (A).
- (b) Both (A) and (R) are true but (R) is not the correct explanation of (A).
- (c) (A) is true, but (R) is false.
- (d) (A) is false, but (R) is true.
- Ans. 1. (a) Both (A) and (R) are true and (R) is the correct explanation of (A).
 - **2.** (a) Both (A) and (R) are true and (R) is the correct explanation of (A).

IV. Data-Based Questions:

CBQ

A total of 1,000 students were clinically screened for physical deformities in order to identify and classify the various forms of physical deformities. Ninety of the students were identified with various physical deformities.

Given below is the chart which depicts the percentage of students having common postural deformities.

On the basis of the given pie-chart, answer the following questions:

1. How many students are with physical deformity bow legs?

(a) 30	(b) 18
(c) 9	(d) 24

2. Which of the following is not a spinal curvature deformity?

(a) Kyphosis	(b) Scoliosis
(c) Lordosis	(d) Flat foot

- 3. Which postural deformities is least in number as per the given data?
 - (a) Round shoulder (b) Knock knee
 - (c) Spinal curvature (d) Bow legs

Ans. 1. (b) 18 2. (d) Flat foot

- 3. (c) Spinal curvature
- V. Picture-Based Questions:

CBQ

Identify the following asana and write the name of the postural deformity that it is helpful in treating:

Ans. 1. Dhanurasana – Kyphosis; 2. Halasana
– Lordosis; 3. Padmasana – Knock Knee;
4. Trikonasana – Scoliosis

VI. Case-Based Questions:

CBQ

 Sandy is diagnosed with postural adaptation of the spine in lateral direction. The curve is identified as convexity right. It happened due to Sandy's underdeveloped legs and carrying heavy loads on one side only.

(CBSE SP 2021 Term 1)

What kind of postural deformity doctors found in Sandy?

- (a) Scoliosis (b) Kyphosis
- (c) Bow Legs (d) Flat foot
- Ans. (a) Scoliosis
 - Posture plays a very significant role in our daily activities. Correct posture means the balancing of the body in an accurate and proper manner. Various types of postural deformities can be identified in individuals. (CBSE SP 2021 Term 1)

From the following picture, the deformities seen on the left most is caused due to deficiency of which nutrient?

- (a) Iron (b) Calcium
- (c) Vitamin D (d) Both (b) and (c)
- Ans. (d) Both (b) and (c)
 - **3.** A female athlete has an abnormal eating behaviour and suffers from Anorexia Nervosa. On the basis of the case given, answer the following questions:
 - (a) What could possibly be a reason behind the behaviour?
 - (b) Which symptoms confirm Anorexia Nervosa?
 - (c) _____ can possibly help the athlete manage her condition.
 - (d) Anorexia Nervosa comprises _____ type of Anorexia and _____ type of Anorexia.
- Ans. (a) Massive weight lossz
 - (b) Fatigue and insomnia
 - (c) Psychotherapy
 - (d) restricting, purging
 - **4.** In relation to the picture, answer the following questions.

- (a) Which deformity is shown here?
- (b) Mention two factors that lead to this condition.
- (c) _____ people mostly suffer from this condition.
- (d) Doing _____ (yoga asana) can correct this condition.

OR

Mention two precautionary measures for preventing this condition.

- Ans. (a) Lordosis
 - (b) Imbalanced diet, obesity
 - (c) Obese
 - (d) Halasana

Two precautionary measures:

- (a) Good nutrition will help in controlling pain, disability and will keep spine healthy. Therefore, a well balanced diet must be taken.
- (b) While carrying a heavy load, the person has to lean forward which results in a bad posture. Even if carrying weight, one should align her/his body in straight position.

B. Very Short Answer Type Questions

- 1. Define posture.
- Ans. Posture can be defined as synchronising body movement which allows a quick and easy transition into the next relevant movement.
 - 2. What do you mean by knock knee? (CBSE 2011)
- Ans. Knock knee is a condition of postural deformity where the knees knock or rub together while walking or standing and the feet and ankles are far apart than normal.
 - **3.** What are the negative impacts of incorrect postures on a person's mental health?
- Ans. Incorrect postures can have negative impacts on a person's mental health by causing physical discomfort, pain and fatigue, which can lead to decreased motivation and energy levels, lower mood, and increased stress levels. Additionally, poor posture can affect one's self-esteem and body image, leading to negative thoughts and emotions.
 - 4. State the common postural deformities.

(CBSE 2017)

- Ans. The common postural deformities are:
 - Spinal curvature
 - Flat Foot
 - Knock Knees
 - Bow Legs
 - Round Shoulder.
 - 5. What is scoliosis? (CBSE 2011)
- Ans. Scoliosis is the abnormal lateral curvature of the spine. It can be bending, twisting or rotating of the spine.
 - 6. What is the main cause of scoliosis?

(CBSE 2012, 2018)

Ans. The main causes of scoliosis are diseases in the joints of bones, polio, rickets, infantile paralysis, cerebral palsy and juvenile osteoporosis or

Physical Education Companion - 12

other diseases. These conditions are also often associated with poor posture, partial deafness and carrying heavy loads on one shoulder.

- What is 'an abnormal curvature of spine at front' termed as? (CBSE 2015)
- Ans. An abnormal curvature of spine at front is termed as lordosis.
 - Suggest any two free hand exercises for correcting round shoulder. (CBSE 2015)
- Ans. The two free hand exercises for correcting round shoulder are:
 - Place both tips of fingers on the shoulders and start encircling the elbows in a clockwise and anticlockwise direction.
 - Hang on the horizontal bar for some time.
 - Suggest any two exercises for correcting flat foot. (CBSE 2016)
- Ans. The two exercises for correcting flat foot are:
 - Walking on the lateral border of the foot.
 - Heel walking involves walking on the heels with whole body weight on the heels.
 - **10.** Name the deformity for which horse riding can be used as corrective measure. (CBSE SP 2016)
- Ans. The deformity for which horse riding can be used as a corrective measure is knock knee deformity. It would help naturally in making a gap between the knees.

C. Short Answer Type-I Questions

- 1. What are the advantages of correct posture? (CBSE 2011, 2012, SP 2015)
- Ans. Correct posture has numerous advantages, including reducing strain on muscles and joints, improving breathing and digestion, promoting better circulation and overall physical health. It also helps to prevent injuries and reduces the risk of developing chronic pain conditions. Proper alignment of the spine and other body parts can enhance balance, coordination, and overall athletic performance, and can even boost self-confidence and mental health by promoting positive body image and reducing stress levels.
 - 2. How do good postures affect an individual's personality?
- Ans. Good postures can positively affect an individual's personality by promoting confidence, self-esteem, and a positive body image. People who maintain good posture appear taller, more alert, and more attentive, which can create a more positive impression on others. Good posture can also enhance the way an individual

carries themselves, giving off an air of poise and self-assurance. Overall, good posture can help to project a more confident, competent, and attractive personality to the world.

- 3. Briefly discuss any four causes of bad postures.
- Ans. There are various causes of bad posture. They are as follows:
 - i. Poor Diet: A diet that lacks in sufficient amounts of nutrients is a common cause of bad posture. Our bones and muscles are weakened when we do not supply them with the nutrition they require on a daily basis. This leads to adopting incorrect postures.
 - **ii. Birth Defects:** In some cases, bad postures are a product of birth defects. Club and dislocation of hips are two examples.
 - iii. **Diseases:** Rickets, polio, infantile paralysis and chronic illnesses which have an impact on vertebral curvature are other common sources of bad postures.
 - iv. Accidents: Serious injuries from accidents can also lead to further physical deformity if the muscles and joints are permanently damaged.
 - 4. What are some of the common postural deformities?
- Ans. Some of the commonly known postural deformities are given below:
 - i. Spinal Curvature
 - ii. Flat Foot
 - iii. Knock Knees
 - iv. Bow Legs
 - v. Round Shoulder
 - **5.** What are the types of physical deformities related to spine?
- Ans. There are several types of physical deformities related to the spine, including scoliosis (abnormal sideways curvature), kyphosis (rounded upper back) and lordosis (swayback or excessive inward curvature of the lower back). These conditions can affect posture, mobility, and overall physical health and wellbeing, and may require medical intervention or physical therapy to manage.
 - 6. What is the main cause of bow legs?
- Ans. Bow legs a condition where the legs appear to curve outwards. Rickets is one of the main causes of bow legs. Children with rickets do not get enough calcium, phosphorus and vitamin D all of which are vital for healthy growth of bones.

- **7.** Which yogic poses are recommended to cure round shoulders?
- Ans. Several yogic poses can help correct rounded shoulders, including:
 - Ustrasana
 - Chakrasana
 - Dhanurasana
 - Bhujangasana

These poses help to stretch and strengthen the muscles of the upper back, chest, and shoulders, improving posture and reducing pain and discomfort associated with rounded shoulders. It is recommended to practice these poses under the guidance of a qualified yoga instructor.

- 8. What is premenstrual syndrome?
- Ans. Experiencing symptoms like, pain in the back legs or abdomen, acne, irritability, mood swings, water retention, tender breasts, headaches, constipation, depression or emotional stress, etc. before the onset of menstrual periods is called premenstrual syndrome. A female may have one or more symptoms a few days before her periods.
 - **9.** List the revised terms to describe the female athlete triad.
- Ans. The revised terms to describe the female athlete triad are
 - i. Low energy availability with or without eating disorder
 - ii. Dysfunction of menstruation
 - iii. Low bone density.
- **10.** What kind of diet should a woman athlete suffering from osteoporosis take? Why?
- **Ans.** A woman athlete suffering from osteoporosis should consume a diet rich in calcium, vitamin D, and other bone-healthy nutrients to support bone health and prevent further bone loss. This may include calcium-rich foods such as dairy products, leafy greens and fortified foods, as well as vitamin D-rich foods such as fatty fish, eggs and mushrooms. It is also important to consume adequate protein, which is essential for bone and muscle health. In some cases, a calcium or vitamin D supplement may be necessary to meet recommended daily intake levels.
 - **11.** What are the major eating disorders?
- Ans. The major eating disorders include anorexia nervosa, bulimia nervosa and binge eating disorder. Anorexia nervosa is characterised by

a distorted body image and an extreme fear of gaining weight, leading to severe calorie restriction and weight loss. Bulimia nervosa involves cycles of binge eating followed by purging behaviors such as vomiting or excessive exercise. Binge eating disorder involves consuming large amounts of food in a short period of time, often accompanied by feelings of shame and guilt.

D. Short Answer Type-II Questions

- 1. What is the correct posture of standing?
- Ans. The correct posture for standing involves maintaining a neutral spine, with the ears, shoulders, hips, and ankles aligned vertically. The feet should be shoulder-width apart, with the weight evenly distributed between both feet. The knees should be slightly bent, and the abdominal muscles engaged to support the lower back. The shoulders should be relaxed, and the chin parallel to the ground. The gaze should be straight ahead, and the arms should hang naturally at the sides.
 - 2. What is the correct posture of sitting?
- Ans. The correct posture for sitting involves keeping the feet flat on the ground, with the knees at a 90-degree angle and the hips level with or higher than the knees. The back should be straight, with the shoulders relaxed and the chin parallel to the ground. The arms should rest comfortably on armrests or the desk, and the computer screen should be at eye level. It is important to take breaks and stand up and stretch periodically to avoid prolonged sitting.
 - 3. Write any four advantages of correct posture.
- Ans. Four advantages of correct posture are as follows:
 - i. Boosting Self-confidence: Proper posture can help you make a good impression and appear more attractive and confident. You look taller, slimmer and more successful when you sit and stand upright.
 - ii. Production of Graceful and Efficient Movements: Mobility and stability are important for efficiency of movements. The combination of muscle elasticity and range of motion of joint constitutes mobility while the ability to maintain posture and control movements freely comprises stability.
 - iii. Physical Fitness: Muscular strength, endurance, agility, balance flexibility, coordination and power are the components of physical fitness. Physical fitness can be

Physical Education Companion – 12

achieved through a combination of daily physical activity, exercise and a healthy diet. These can be accomplished by any individual who follows correct posture regimes.

- iv. Sociability: Graceful movement and an upright position are means of representing your genteel outlook symbolising selfdiscipline, moral fortitude and dignity. It contributes to shaping a friendly and strong personality, which in turn helps you maintain a successful social life.
- 4. How can the postural deformities be corrected?
- Ans. Postural deformities can be corrected through a combination of exercises, stretches and physical therapy. A physical therapist can work with an individual to develop a personalised plan to address their specific postural issues, including strengthening weak muscles, stretching tight muscles, and improving overall flexibility and mobility. Additionally, some adjustments to the workplace or home environment may be necessary, such as adjusting the height of a desk or chair to promote proper alignment. In some cases, medical devices may be necessary to support proper alignment and facilitate healing.
 - 5. Write about the deformities of spinal curvature. (CBSE 2016)
- Ans. The lumber spine is characterised by a moderate anterior hyperextension curve, i.e. everybody's spine has some form of curvature. Spinal curve helps our backs absorb shock. A healthy spine should run however straight down the centre. Sometimes, abnormal spinal curvatures are formed. They are associated with the abnormality in the formation, alignment or shape of the vertebral column or spine. These deformities are the result of carrying excessive weight beyond capacity of the body. We have three types of spinal curvatures:
 - Kyphosis
 - Lordosis
 - Scoliosis
 - Enlist the spinal postural deformities. Explain the cause of kyphosis and precautions to avoid it. (CBSE SP 2016)
- Ans. The list of spinal posture deformities are:
 - Kyphosis
 - Lordosis
 - Scoliosis

Causes of kyphosis: Kyphosis is caused by malnutrition, illness, deficiency of pure air, insufficient exercises, rickets, carrying heavy loads, poorly shaped furniture, weak muscles, ageing, spinal injury, arthritis and other degenerative bone diseases and the habit of doing work by leaning forward.

Precautions: It can be prevented by following correct posture while sitting, standing and walking from an early age. Proper exercise and diet are also important measures.

- **7.** Briefly explain lordosis, its causes and remedial and preventive measures.
- **Ans.** Lordosis is the excessive inward curvature of spine resulting in a forward curve in the lumber region. The body becomes stiff and painful.

Causes: It can be caused because of imbalanced diet, improper environment, improper development of muscles, obesity and diseases affecting vertebrae and spinal muscles like spondylitis and osteoporosis. Physical inactivity and excessive intake of food are also the major causes.

Precautions: The following are the precautionary and remedial measures:

- Good nutrition
- By weight control especially at an early age.
- While carrying a heavy load, the person has to lean forward which results in a bad posture.
 Even if carrying weight one should align her/ his body in straight position.
- Stand straight with the feet and shoulder width apart.
- Bend your knee and hold your ankle. When you pull your back, tilt your pelvis forward. Hold this position for 25-30 seconds.
- Lie down on the floor facing the ceiling and put your feet on the floor; tilt your pelvic back by pushing the lower back into the floor. Lift your torso off the floor to 30° angle by supporting your neck with your hands. Come back slowly to starting position and repeat exercises 10 times.
- Lie down your back on the floor facing upward with the flexion of knees while keeping your feet flat on the floor apart from each other. Squeeze your gluteus and lift up your hip upward as much as you can. Hold for 20 to 30 seconds and return to starting position. Repeat this exercise 20 times a day.
- Toe touching exercises, sit up and halasana should be performed regularly.

- For performing head to knee exercises, remain seated on the mat with your legs stretched forward. Slowly, lower your head and try to touch your forehead to your knees. Hold to count of 10 and repeat it for 10 to 15 times.
- **8.** Briefly explain scoliosis, its causes and preventive and remedial measures.
- Ans. Scoliosis is the abnormal lateral curvature of the spine. It can be bending, twisting or rotating of the spine. People with scoliosis develop additional sideways curves on either side of the body and may be called scoliotic curves. These curves are defined in terms of their convexities and identified as right convexities and left convexities.

Primary causes: The primary causes are diseases in the joints of bones, polio, rickets, infantile paralysis, cerebral palsy and juvenile osteoporosis or other diseases.

Precautionary measures:

- An unhealthy diet and low levels of specific minerals can contribute to scoliosis progression.
- Carrying heavy things especially on one side should be avoided as it adds to natural pull of gravity and compresses the spine further.
- Long distance running on uneven terrain and prolonged running can result spinal compression, may bend or rotate your curve and cause greater risk of scoliosis progression. Thus, running should be limited.

Remedies:

- Lie down facing the ground, bend your elbow, and support your body with your toes. Squeeze your abs in and hold this position for 5 seconds. Repeat technique step 10 times.
- Scoliosis can be cured by breast stroke or butterfly technique of swimming.
- Yoga has been one of the best practices to cure any ailment and also helps in enhancing overall physical strength. It maintains a balance for the body in case of scoliosis.
- Use a firm quality mattress. Avoid the soft mattresses and use extra pillows for comfort instead.
- Sitting or standing in one place for prolonged period stresses the spine. Stretch or take a walk as often as possible. Choose a chair with good support if you sit for extended period.

- For mild scoliosis football is another great exercise that can strengthen the core muscle. All positions except goalkeeper are fine.
- **9.** Briefly explain flat foot, its causes and preventive and remedial measures.
- Ans. The appearance of flat foot is natural and common in infants. Flat foot in children usually disappears when they attain adolescence and adulthood. Persisting during the later periods of childhood becomes a postural deformity. A child with a flat foot cannot become an efficient sportsperson. They feel pain mainly in the heel area and experience difficulty in standing and walking.

Causes: It usually develops due to excessive stress on the feet. Weak muscles in feet, ankles and lower leg cannot bear body weight. Conditions related to ageing such as weakness of muscles and bones, uncomfortable shoes, foot injuries and carrying heavy loads for longer period also cause flat foot.

Precautions:

- Wearing comfortable shoes that fully support the arch and help stabilise the heel.
- Walking bare feet should be avoided.
- Losing excess weight can reduce the stress on feet.
- Infants or toddlers should not be compelled to walk at very early stage.
- Carrying heavy loads should be avoided at the early stage of development.
- High-heeled shoes should be avoided.

Remedial measures:

The exercises like walking on the toes, walking on the lateral border of the foot, making the fist with the foot relaxing them and then repeating it again, skipping on a rope, the vajrasana yogic asana and heel walking involves walking on the heels with the whole body weight on the heels.

- **10.** Briefly explain knock knee, its causes and preventive and remedial measures.
- Ans. The scientific name of knock knee is genu valgum. The term originates from the Latin word 'genu' which means 'knee' and 'valgus' which means 'bent outside'. It is a condition of postural deformity where the knees knock or rub together while walking or standing and the feet and ankles are fat apart than normal. One having this problem faces problems in walking and running.

Causes:

- Lack of vitamin D and minerals like calcium and phosphorus.
- Problems associated with the development of bones and joints like rickets, osteoporosis and arthritis also contribute to knock knee.
- Other possible factors include obesity, flat foot, an injury or infection affecting the knees or leg bones and carrying a heavy load at an early age.

Precautions and remedies:

- Daily cycling for 20 to 30 minutes and horse riding would help naturally in making a gap between the knees.
- Keep a pillow between the legs while sleeping, walking or sitting daily for 15 to 20 minutes.
- Knock knees' special shoes, night braces and walking calipers may prevent knocking.
- Perform the padmasana and gomukhasana yogic poses daily.
- Supplement of vitamins D like cod liver oil and minerals like calcium and phosphorus should be taken for strengthening the bones.
- **11.** Briefly explain bow legs, its causes and preventive and remedial measures.
- Ans. Bow leg is simply a normal variation in leg appearance. It is a condition of physical deformity marked by an outward bowing of the leg, i.e. knees are wide apart and ankles are touching. There is a distinct space between lower legs and knees which is opposite to knock knees. When standing with feet together, the individual legs appear like an archer's bow. It may be on either side or both legs curving outward. Bowed legs are most apparent while walking, running and standing.

Causes: Rickets is the main cause of bow legs. Children with rickets do not get enough calcium, phosphorus and vitamin D all of which are vital for healthy growing of bones.

Precautions and remedies:

- Never force babies to walk at a very tender age.
- Appropriate body weight with respect to ages should be maintained.
- A balanced diet is essential for the timely growth and maintenance.
- Vitamin D should be taken in a recommended amount.

- Intake of well balanced diet is crucial for overall development and functioning of body.
- Some special shoes, casts and leg braces can be used for correcting bow legs in young children.
- Bow-legged person should try to walk for some distance on the inner edge of the feet.
- In-toeing position of walking where feet turn inward instead of pointing straight should be adopted.
- What do you mean by round shoulders? Suggest any four physical activities for correcting round shoulders. (CBSE 2015)
- **Ans.** This postural abnormality is characterised by a drooping shoulder which appears round and a slight forward bending of the back.

Causes: There are many factors which promote development of rounded shoulders:

- Heredity factors led to rounded shoulders.
- Tight clothing and shoes affect posture.
- High-heeled shoes, tight fitting clothes, wide belt, etc. change the centre of gravity which ultimately leads to poor posture.
- Poor posture of sitting, standing and walking, improper furniture, excessive weight training like bench press, bicep curls and shoulders press exercises result in rounded shoulders.
- Complete lack of exercises which are concerned with shoulders also affects the shoulders, leaving them vulnerable to rounded shoulder.

Precautions and remedies:

- Never slouch while sitting and walking and always stand flat back position.
- Those who have rounded shoulders should not wear tight fitting clothes and avoid high heeled shoes.
- Avoid sitting on faulty furniture which is not comfortable.
- Place the tips of fingers of both hands on shoulders and encircle the elbows in a clockwise and anticlockwise direction.
- Hang on the horizontal bar for some time.
- Perform yogic techniques especially chakrasana and dhanurasana on a regular basis.
- **13.** Suggest at least two exercise methods for treating (a) lordosis, (b) round shoulder, (c) flat

feet, (d) scoliosis, (e) kyphosis, (f) knock knee, and (g) bow legs.

Ans. (a) Lordosis:

- First lie down in a prone position with hands under abdomen. Then keep hips and shoulder down and gently press hands upon abdomen and raise the lower back.
- Bend knees forward while allowing hips to bend back behind. Keeping the back straight and knees pointed in the same direction as feet, lower your body until thighs are parallel to floor. Extend the same from the starting position.

(b) Round shoulder:

- Place the tips of fingers of both hands on shoulders and encircle the elbows in a clockwise and anticlockwise direction.
- Hang on the horizontal bar for some time.
- (c) Flat feet:
- Practise jumping on toes for some time.
- Rope skipping exercise.
- (d) Scoliosis:
- Lie down in prone position. Raise right arm upward and left arm at the side. After this position, bring right arm towards the left over the head, by pressing down with left hand and then slide the left hip up.
- Stand erect with feet few inches apart. Lift up the left and hip. Extend the right arm and bend the arm towards the left over head while pressing the left side of rib by the left hand.
- (e) Kyphosis:
- Lie down in a prone position with hands on hips. After that raise your head and chest several inches from the ground and tuck your chin during this exercise. Hold this position for some time and return to previous position. Repeat this exercise at least 10 times.
- Sit in a normal position with a stick held in horizontal position over the head and trunk, hands well stretched. After that lower the stick and then raise it behind head and shoulders. Repeat this exercise 10 to 12 times.
- (f) Knock knee:
- Daily cycling for 20 to 30 minutes and horse riding would help naturally in making a gap between the knees.
- Perform the padmasana and gomukhasana daily that may counteract the effects of knock knee.

- (g) Bow legs:
- Bow-legged persons should try to walk for some distance on the inner edge of the feet.
- Do yogic exercises like garudasana and ardha matsyendrasana regularly.
- 14. How does intensive exercise impact menarche?
- Ans. It has been found that intensive exercise and sports activities can cause abnormalities, like delayed menarche and amenorrhoea. Such activities create physiological stress which affects the reproductive process and disrupts the normal patterns. It is true that menstrual abnormalities or other health issues are frequent among women who are involved in intensive exercises and sports activities.
 - Write briefly about menstrual dysfunctions and their effect on sports participation of female athletes. (CBSE 2018)

Ans. Menstrual Dysfunction

The average menstrual cycle consists of 21–35 days and menstrual bleeding or periods occur during the first 2–7 days of the cycle. Each cycle ends on the first day of the next menstrual bleeding. Any abnormality or irregularity in this process is termed as menstrual dysfunction. It is reported that about 9 - 30% of women suffer from menstrual dysfunction of one form or the other. Some common types of menstrual dysfunction are listed below:

Amenorrhoea

A case of delayed menarche or a case of absence of menstrual period for 6 months or more after the last period is called amenorrhoea. Sometimes, it may be absent for years.

Dysmenorrhoea

A menstrual period accompanied by sharp pain or cramps in the lower abdomen and pelvic area is called dysmenorrhoea or painful menstruation. During menstruation, the muscles of the uterus contract due to release of molecular compounds called prostaglandins and other inflammatory mediators.

Premenstrual Syndrome

Experiencing symptoms like, pain in the back legs or abdomen, acne, irritability, mood swings, water retention, tender breasts, headaches, constipation, depression or emotional stress, etc. before the onset of menstrual periods is called premenstrual syndrome. A female may have one or more symptoms a few days before her periods.

Menorrhagia or Heavy Periods

Normally the menstrual flow is heavy at first and then gradually decreases. But increased and heavy flow at regular intervals or a loss of more than 80 mL of blood during each menstrual bleeding indicates menorrhagia or heavy periods.

Irregular Periods

Mostly, menstrual cycles form a regular pattern of every 21–35 days after 1–3 years from the first bleeding or menarche. For some females, periods might skip altogether for months or come earlier than expected.

Prolonged Periods

On an average, the menstrual bleeding or periods lasts about 2–7 days. Prolonged periods are longer than this duration and occur at unpredictable intervals.

Delay in Menarche

The average age of menarche in a female ranges from 12–14 years. If it is later than 14 years and above, it is a case of delayed menarche, which is also termed as primary amenorrhoea. At times, it may be as late as in 18 years of age or more.

16. Create a mind map describing female athletes triad and its causes.

- 17. What is the meaning of female athletes triad? Explain any two in brief. (CBSE SP 2022)
- Ans. It is a serious disorder of three interrelated medical conditions; energy deficiency with eating disorders: or without menstrual disturbances; and reduced bone mineral density which is likely to cause osteoporosis. The triad usually affects teenage girls who consume less calories and exercise excessively. They may develop eating disorders and become obsessed with exercise to achieve low body weight and enhance and performance in sports. Therefore, they are at greater risk of suffering from this syndrome. Energy deficiency leads to menstrual disturbances like amenorrhoea which is associated with low oestrogen levels.

Low oestrogen levels contribute to a decrease in bone density and lack of calcium and vitamin D in the body. This is one of the main causes of osteoporosis. A women is likely to have the other two conditions if she is suffering from one condition of the triad

Amenorrhoea: A case of delayed menarche or a case of absence of menstrual period for 6 months or more after the last period is called amenorrhoea. Sometimes, it may be absent for years.

Osteoporosis: The National Institutes of Health (USA) defines osteoporosis as "a skeletal disorder characterised by compromised bone strength predisposing a person to an increased risk of fracture". It is a condition in which the density and strength of the bone is reduced, making it vulnerable to frequent fractures, like, stress fracture and other bone injuries. This is why osteoporosis is fatal to female athletes and their athletic careers.

18. What are the causes of osteoporosis?

(CBSE 2019)

- Ans. Osteoporosis can be caused due to:
 - Calcium Deficiency: Calcium is a key component is building the density and strength of bones. The recommended daily requirement of calcium is 1000-1500 mg. Insufficient calcium in the body can have lifelong consequences for bones. Insufficient amount of calcium in the body causes other organs such as heart, muscles, nerves, etc. to use up the calcium stored in the bones. This results in depletion of calcium in the bones, decreasing their density and hardness, therefore causing osteoporosis.
 - Amenorrhoea: Our bones are constantly braking down and rebuilding again to maintain their structure and strength. Oestrogen is essential to keep a balance between the two and helps absorption of calcium. Since women suffering from amenorrhoea have decreased oestrogen level in the body, it also disrupts the remodelling process in bones. Formation of abnormal bone structure and loss of calcium deposit takes place. Bones become weak, porous and prone to fractures. Therefore amenorrhoea can also cause osteoporosis.
 - **19.** Briefly explain eating disorders and classify them.
- Ans. Eating disorders are a range of psychological disorders in which a person's eating behaviour

is abnormal. It may include inadequate or excessive food intake which can ultimately harm an individual's well-being. It is commonly exhibited along with conditions such as anxiety, depression and other addictive or selfdestructive behaviours. It can be either Anorexia Nervosa or Bulimia Nervosa.

- (a) Anorexia Nervosa is an eating disorder in which the patients have an obsessive fear of gaining weight.
- (b) Bulimia Nervosa is an eating disorder in which the patient consumes a large quantity of food within a short period and subsequently ejects it from the body through vomiting, or with the help of laxatives or diuretics.
- **20.** Explain the meaning of anorexia nervosa and cite its types.
- Ans. It is an eating disorder in which the patients have an obsessive fear of gaining weight. They have an unrealistic fear of gaining weight. They have an unrealistic perception of body image and view themselves as overweight even when they are clearly underweight. It usually begins during the teens and is more common in women than men. It may become a lifelong disease without intervention at the initial stage. This disorder can have damaging health consequences such as heart problems, brain damage, multiple organ failure, osteoporosis and infertility. It should, however, be noted that anorexia nervosa does not necessarily mean loss of appetite. The patient can retain their appetite and suppress it systematically. It is of two types:
 - Restricting type: In this form, consumption of food is severely restricted in various ways like maintaining a calorie count that is too low for the body's requirement. The patient reduces her/his weight effectively through obsessive rules like drastic exercising.
 - Purging/Binge eating type: In this type, the restriction of food intake is accompanied by binge-eating and purging phases.
 - 21. Explain briefly about eating disorder bulimia. (CBSE 2019)
- Ans. Bulimia nervosa or simply bulimia, is an eating disorder in which the patient consumes a large quantity of food within a short period and subsequently ejects it from the body through vomiting, or with the help of laxatives or diuretics. The term 'bulimia' means 'the ravenous hunger of an fox', a reference to the voracious appetite of the patient. When a person suffers from

bulimia, she/he is under the grip of a hunger that that is induced by psychological reasons, physiological ones.

- 22. Explain the meaning of bulimia nervosa.
- **Ans.** Bulimia nervosa or simply bulimia, is an eating disorder in which the patient consumes a large quantity of food within a short period and subsequently ejects it from the body through vomiting, or with the help of laxatives or diuretics. It has two types like:
 - Purging Bulimia: In this type of bulimia, the patient undergoes self-induced vomiting or abuses diuretics, laxatives or enemas. The aim is to remove food from the body before it gets digested and deposited.
 - Non-purging Bulimia: In this type of bulimia the individual uses methods like fasting, strict dieting or excessive exercising to get rid of the calories and to prevent weight gain.

E. Long Answer Type Questions

- 1. What do you mean by correct posture? Explain the standing and sitting postures.
- **Ans.** Correct posture refers to the alignment of the body in a way that minimizes stress on muscles and joints. It involves maintaining a balance between the different body parts while standing, sitting, or lying down.

When standing, correct posture involves keeping the feet shoulder-width apart with weight distributed evenly on both feet. The shoulders should be relaxed, the chest lifted, and the chin parallel to the ground. The knees should be slightly bent and the abdominal muscles engaged to support the spine.

When sitting, correct posture involves sitting with the hips all the way back in the chair with both feet flat on the ground. The back should be straight with the shoulders relaxed, and the head aligned with the spine. The arms should rest comfortably on the armrests, and the knees should be at a 90-degree angle.

Maintaining correct posture is important to prevent pain and injury and promote overall health and well-being.

2. What are the causes of bad posture?

(CBSE 2015, 2017)

Ans. The causes of bad postures are as follows:

i. Fatigue: Sitting at the office for long hours at the end can cause damage to the spine.

Physical Education Companion - 12 25

- ii. III-fitting Clothes and Shoes: When you wear tight clothes, the nervous system configures posture based on information received from the skin and other involved parts of the body; this may lead to the body as a whole adopting positions that are not good for the skeletal structure. Pointed heels should only be worn occasionally and not as a rule as they can cause sore calf muscles and varicose veins.
- iii. Lack of Proper Exercise: Regular exercise promotes utilisation of muscles and bones so that they remain strong. Meanwhile, inactivity leads to the adoption of a poor posture. Improper exercises can also be damaging to the vertebral structure.
- iv. Poorly Designed Furniture: The furniture we use shape our posture to a large degree. Too soft mattresses and chairs that do not let the back assume its normal curve are culprits behind formation of bad postures The bench and desks in the school should be of ideal height that the students can use them without putting pressure on their backs and shoulders.
- v. Carrying Heavy Load: Carrying a heavy load, such as a weighty school backpack, puts additional stress on the spine. It can alter the posture of the person and increase postural sway. The load should be within 10% of the individual's body weight.
- vi. Obesity: Excess weight never has positive impacts on the body. Lordosis is caused by excess abdominal weight. Obesity can further result in flat foot, bow legs and knock knee. A healthy weight helps in maintenance of a neutral posture and balanced spine.
- 3. Explain any five postural deformities.

(CBSE 2012)

- Ans. Any five postural deformities are as follows:
 - i. **Kyphosis:** This is a postural deformity characterised by an excessive forward curvature of the upper back, resulting in a rounded or hunched-over appearance. It can be caused by poor posture, osteoporosis or spinal fractures.
 - **ii.** Lordosis: This is an inward curvature of the lower back that results in a swayback appearance. It is commonly caused by poor posture or excessive weight on the abdomen, such as during pregnancy or obesity.

- **iii. Scoliosis:** This is a lateral curvature of the spine, which can be either C-shaped or S-shaped. It often develops during childhood or adolescence, and can be caused by genetic factors or poor posture.
- iv. Round shoulders: This postural deformity is characterised by a forward rounding of the shoulders, which can lead to a hunchback appearance. It can be caused by poor posture, weak back muscles, or spending too much time hunched over a computer or phone.
- v. Knock knees: This is a condition where the knees angle inwards, causing the feet to be farther apart than the knees when standing with the feet together. It can be caused by genetics, poor posture, or a lack of muscle tone in the legs.
- 3. Explain any five postural deformities.(CBSE 2012)
- Ans. Some of the commonly known postural deformities are:
 - (i) Spinal curvature
 - (ii) Flat foot
 - (iii) Knock knees
 - (iv) Bow legs
 - (v) Round shoulder

(For detailed description refer to pages 32 to 38 of the book)

- **4.** Explain in detail the postural deformities related to spine.
- Ans. There are several postural deformities related to the spine, including:
 - **i. Scoliosis:** a condition where the spine curves to the side, resulting in uneven shoulders, waist and hips. Scoliosis can be congenital or develop later in life and may range from mild to severe.
 - **ii. Kyphosis:** an excessive curvature of the thoracic spine, resulting in a rounded upper back, hunchback posture and limited mobility. Kyphosis can be caused by poor posture, osteoporosis, or congenital conditions.
 - iii. Lordosis: an excessive inward curvature of the lumbar spine, resulting in a swayback posture and an anterior pelvic tilt. Lordosis can be caused by muscle weakness or imbalances, pregnancy, or obesity.
 - 5. Explain the causes and corrective measures for knock knee and scoliosis. (CBSE 2019)

Ans. Causes of Knock Knee:

- Lack of vitamin D and minerals like calcium and phosphorus.
- Problems associated with the development of bones and joints like rickets, osteoporosis and arthritis also contribute to knock knee.
- Other possible factors include obesity, flat foot, an injury or infection affecting the knees or leg bones and carrying a heavy load at an early age.

Corrective measures

- Daily cycling for 20 to 30 minutes and horse riding would help naturally in making a gap between the knees.
- Keep a pillow between the legs while sleeping, walking or sitting daily for 15 to 20 minutes.
- Knock knees' special shoes, night braces and walking calipers may prevent knocking.
- Perform the padmasana and gomukhasana yogic poses daily.
- Supplement of vitamins D like cod liver oil and minerals like calcium and phosphorus should be taken for strengthening the bones.

Causes of Scoliosis

- The primary causes are diseases in the joints of bones, polio, rickets, infantile paralysis, cerebral palsy and juvenile osteoporosis or other diseases.
- An unhealthy diet and low levels of specific minerals can contribute to scoliosis progression.
- Carrying heavy things especially on one side should be avoided as it adds to natural pull of gravity and compresses the spine further.
- Long distance running on uneven terrain and prolonged running can result spinal compression, may bend or rotate your curve and cause greater risk of scoliosis progression. Thus, running should be limited.

Corrective measures

- Lie down facing the ground, bend your elbow, and support your body with your toes. Squeeze your abs in and hold this position for 5 seconds. Repeat technique step 10 times.
- Scoliosis can be cured by breast stroke or butterfly technique of swimming.
- Yoga has been one of the best practices to cure any ailment and also helps in enhancing overall physical strength. It maintains a balance for the body in case of scoliosis.

- Use a firm quality mattress. Avoid the soft mattresses and use extra pillows for comfort instead.
- Sitting or standing in one place for prolonged period stresses the spine. Stretch or take a walk as often as possible. Choose a chair with good support if you sit for extended period.
- For mild scoliosis football is another great exercise that can strengthen the core muscle. All positions except goalkeeper are fine.
- 6. What are some ways in which postural deformities can be rectified?
- Ans. The ways in which postural deformities can be rectified are as follows:
 - We have two types of postural deformities like functional and structural. In functional deformities only the soft tissues are affected and can be corrected by various types of physical activities. On the other hand, structural deformities affect the bony structure of body. In this case physical activities are not quite helpful but with the help of surgery desired improvement and correction can be done.
 - In functional deformities, physical activities are very effective especially for those elementary school years. Most of the deformities can be corrected at this tender age.
 - Corrective exercises and physical activity should be encouraged and conducted during the physical and health education period. There are numerous physical activities or exercises which would be helpful in correcting postural deformities.
 - 7. Discuss menstrual dysfunction and its types.
- Ans. Menstrual dysfunction: The average menstrual cycle consists of 21–35 days and menstrual bleeding or periods occur during the first 2–7 days of the circle. Each cycle ends on the first day of the next menstrual bleeding. Any abnormality or irregularity in this process is termed as menstrual dysfunction. Its types can be:
 - Amenorrhoea: A case of delayed menarche or a case of absence of menstrual period for 6 months or more after the last period is called amenorrhoea. Sometimes, it may be absent for years.
 - Dysmenorrhoea: A menstrual period accompanied by sharp pain or cramps in the lower abdomen and pelvic area is called dysmenorrhoea or painful menstruation.

- Premenstrual syndrome: Experiencing symptoms like, pain in the back legs or abdomen, acne, irritability, mood swings, water retention, tender breasts, headaches, constipation, depression or emotional stress, etc. before the onset of menstrual periods is called premenstrual syndrome.
- Menorrhagia or heavy periods: Normally the menstrual flow is heavy at first and then gradually decreases. But increased and heavy flow at regular intervals or a loss of more than 80 mL of blood during each menstrual bleeding indicates menorrhagia or heavy periods.
- Irregular periods: Mostly, menstrual cycles form a regular pattern of every 21–35 days after 1–3 years from the first bleeding or menarche. For some females, periods might skip altogether for months or come earlier than expected.
- Prolonged periods: On an average, the menstrual bleeding or periods lasts about 2–7 days. Prolonged periods are longer than this duration and occur at unpredictable intervals.
- Delay in menarche: The average age of menarche in a female ranges from 12–14 years. If it is later than 14 years and above, it is a case of delayed menarche, which is also termed as primary amenorrhoea.
- 8. Describe the relationship between menstruation, women's health and sports participation.
- Ans. Relationship between menstruation, women's health and sports participation can be discussed as under:
 - It is commonly believed that taking part in exercises and sports activities during menstruation causes serious damage to effects women's health and sports performance. There have been a number of discussions on the subject and, therefore, we cannot overlook this reproductive process during training, planning, schedules and preparing for competitions, etc. But we cannot take it as final. It is simply a normal cycle every healthy woman experiences during her reproductive years. A woman has two menstrual cycles each of different schedules and it is during the second phase, i.e. luteal phase the oestrogen rises and causes changes in body temperature, metabolism and recovery time. During the bleeding period, there is a slight drop in a woman's

weight but it has been found that women perform even better during their periods.

- The fact is effects of menstruation have different mechanism in different women and women does not always respond to it in similar cases in most cases. Performance can be poor but better at any time.
- Lastly, exercises and sports activities are essential for every individual to lead a healthy life and the overall well-being.
- 9. Discuss female athletes triad in detail.

(CBSE 2016)

Ans. It is a serious disorder of three interrelated medical conditions: energy deficiency with or without eating disorders; menstrual disturbances; and reduced bone mineral density which is likely to cause osteoporosis. The triad usually affects teenage girls who consume less calories and exercise excessively. They may develop eating disorders and become obsessed with exercise in their efforts to maintain their physique. Female athletes often restrict calorie intake and perform intensive training and exercise to achieve low body weight to enhance sports performance. Therefore, they are at greater risk of suffering from this syndrome.

Energy deficiency leads to menstrual disturbances like amenorrhoea which is associated with low oestrogen levels. Low oestrogen levels contribute to a decrease in bone density and lack of calcium and vitamin D in the body. This is one of the main causes of osteoporosis. A female is likely to have the other two conditions if she is suffering from one condition of the triad. In this endeavour, the help of coaches, trainers, physicians and fitness experts is crucial.

- **10.** Make a table discussing eating disorders, their causes, symptoms and management.
- Ans. Eating disorders are a range of psychological disorders in which a person's eating behaviour is abnormal. Eating disorders may include inadequate or excessive food intake which can ultimately harm an individual's well-being. It is commonly exhibited along with conditions such as anxiety, depression and other addictive or self-destructive behaviours. Patients of eating disorders are often obsessed with food, body image and weight. Eating disorders are serious emotional and physical problems that can have life-threatening consequences, it is dangerous to view them as a lifestyle choice. Any one can fall prey to it at any stage. It severely undermines

growth and development inflicting side effects like malnutrition and electrolyte imbalance. Major eating disorders include anorexia nervosa and bulimia nervosa.

F. Value-Based Question

Irfan suggested to his sister Shumaila not to slouch (lazy and drooping way) in the chair rather always sit with your back straight. He also explained the advantages and disadvantages of sitting in correct posture. Shumaila immediately followed his instructions and thanked him for telling her the benefits of sitting in a correct posture.

Answer the following questions based on the above passage:

- 1. What is correct sitting posture?
- 2. Which deformity can be developed by slouching?
- 3. What are the values shown by Irfan and his sister?
- Ans. 1. The correct posture for sitting involves keeping the feet flat on the ground, with the knees at a 90-degree angle and the hips level with or higher than the knees. The back should be straight, with the shoulders relaxed and the chin parallel to the ground. The arms should rest comfortably on armrests or the desk, and the computer screen should be at eye level. It is important to take breaks and stand up and stretch periodically to avoid prolonged sitting.
 - 2. Slouching can lead to the development of kyphosis, a postural deformity characterized by an excessive forward curvature of the upper back, resulting in a rounded or hunched-over appearance.
 - 3. Sharing knowledge, care for others, etc.

CHAPTER 3

YOGA AS PREVENTIVE MEASURE FOR LIFESTYLE DISEASES

P. 70-76

A. Objective Type/Multiple-Choice Questions

I. Multiple-Choice Questions:

- 1. Which of the following factors does not cause obesity?
 - (a) Genetics
 - (b) Frequency of eating
 - (c) Psychological factors
 - (d) None of these
- Ans. (d) None of these
 - 2. What is/are the cause/s of obesity?
 - (a) Genetics (b) Overeating
 - (c) Physical inactivity (d) All of these
- Ans. (d) All of these
 - Body Mass Index (BMI) can be calculated using the formula:
 - (a) BMI = weight in kg/(height in m)²
 - (b) BMI = (weight in kg)/(height in m)²
 - (c) $BMI = (weight in kg)/(height in m)^2$
 - (d) BMI = weight in kg/height in m
- **Ans.** (a) BMI = weight in $kg/(height in m)^2$
 - 4. Identify the asana:

(CBSE SP 2022)

- (a) Paschimottanasana
- (b) Halasana
- (c) Vajrasana
- (d) Dhanurasana
- Ans. (d) Dhanurasana
 - 5. Which of the following asanas are beneficial for diabetes?
 - (a) Hastasana, Vajrasana, Vrikshasana
 - (b) Bhujangasana, Paschimottanasana, Ardha Matsyendrasana
 - (c) Vajrasana, Trikonasana, Matsyasana
 - (d) Parvatasana, Shavasana, Chakrasana

- Ans. (b) Bhujangasana, Paschimottanasana, Ardha Matsyendrasana
 - 6. What is type 3 diabetes also known as?
 - (a) Insulin dependent diabetes
 - (b) Gestational diabetes
 - (c) Insulin independent diabetes
 - (d) Both (b) and (c)
- Ans. (b) Gestational diabetes
 - 7. What should be the normal blood pressure range at rest?
 - (a) 80–120 mm/Hg systolic and 60-90 mm/Hg diastolic
 - (b) 100–120 mm/Hg systolic and 60-100 mm/Hg diastolic
 - (c) 100–140 mm/Hg systolic and 60-90 mm/Hg diastolic
 - (d) 80–140 mm/Hg systolic and 50-90 mm/Hg diastolic
- Ans. (c) 100–140 mm/Hg systolic and 60-90 mm/Hg diastolic
 - 8. Vajrasana should not be performed if an individual is suffering from (CBSE 2020)
 - (a) hernia. (b) peptic ulcer.
 - (c) asthma. (d) chronic knee pain.
- Ans. (a) hernia.
 - 9. The benefits of Shavasana is/are: (CBSE 2020)
 - (a) It increases concentration power.
 - (b) It provides relaxation in high blood pressure.
 - (c) It is helpful in reducing stress.
 - (d) All of these.
- Ans. (d) All of these.
 - 10. makes the spine flexible and increases its elasticity.
 - (a) Ardha chandrasana
 - (b) Paschimottanasana
 - (c) Ardha matsyendrasana
 - (d) Shavasana
- Ans. (c) Ardha matsyendrasana
 - **11.** Which one of the following is not a cause of hypertension?
 - (a) Genetic causes
 - (b) Obesity
 - (c) Lack of exercise
 - (d) Incorrect body posture
- Ans. (d) Incorrect body posture

- **12.** Which one of the following asanas is not helpful in obesity?
 - (a) Tadasana
 - (b) Pavanmuktasana
 - (c) Ardha Matsyendrasana
 - (d) Mandukasana
- Ans. (d) Mandukasana
 - 13. Which of the following asanas is the best for asthma?
 - (a) Makarasana (b) Chakrasana
 - (c) Bhujangasana (d) Pavanmuktasana
- Ans. (c) Bhujangasana
 - 14. Gomukhasana, Vakrasana and Matsyasana are helpful in the treatment of which disease?
 - (a) Diabetes (b) Obesity
 - (c) Asthma (d) Hypertension
- Ans. (c) Asthma
 - 15. Which asana means crocodile pose in English?
 - (a) Vakrasana (b) Makarasana
 - (c) Bhujangasana (d) Ushtrasana
- Ans. (b) Makarasana
 - **16.** Gomukhasana, Dhanurasana and Matsyasana are helpful in curing which disease?
 - (a) Diabetes (b) Hypertension
 - (c) Asthma (d) Obesity
- Ans. (c) Asthma

(i)

(ii)

II. Match the following:

- List I Problem
- List II Causes
- Diabetes (1) Allergic
- hypertension (2) Sugar build-up
- (iii) Asthma (3) Overeating
- (iv) Obesity
- (4) Incorrect posture

Select the correct set of options:

- (a) (i)-(3), (ii)-(4), (iii)-(2), (iv)-(1)
- (b) (i)-(2), (ii)-(4), (iii)-(1), (iv)-(3)
- (c) (i)–(1), (ii)–(2), (iii)–(3), (iv)–(4)
- (d) (i)-(4), (ii)-(3), (iii)-(2), (iv)-(1)
- Ans. (b) (i)-(2), (ii)-(4), (iii)-(1), (iv)-(3)
- III. Assertion-Reason Type Questions:

Given below are the two statements labelled Assertion (A) and Reason (R).

A: Obesity is a physical condition in which a person accumulates fat in excess so much so that it has a negative effect on his/her health.

R: Obesity has become a universal problem.

In the context of the two statements given above, which one of the following is correct?

- (a) Both (A) and (R) are true and (R) is the correct explanation of (A).
- (b) Both (A) and (R) are true but (R) is not the correct explanation of (A).
- (c) (A) is true, but (R) is false.
- (d) (A) is false, but (R) is true.
- Ans. (b) Both (A) and (R) are true but (R) is not the correct explanation of (A).

IV. Data-Based Questions:

Given below is the graph which depicts the percentage of people suffering from various diseases in cities:

CBQ

On the basis of the graph given above, answer the following questions:

- 1. Which of the following reasons can cause asthma?
 - (a) Genetics
 - (c) Respiratory infections (d) All of these

(b) Allergens

(b) Lumbar

(b) Asthma

- 2. Slouching due to electric gadgets causes which type of back/neck pain?
 - (a) Cervical
 - (c) Both (a) and (b) (d) None of these
- 3. Which of the given diseases can be classified as insulin dependent and insulin independent?
 - (a) Diabetes
 - (c) Hypertension (d) Obesity
- Ans. 1. (d) All of these; 2. (c) Both (a) and (b);
 3. (a) Diabetes

V. Picture-Based Questions:

CBQ

1. Identify the following asanas and write their names:

- Ans. (a) Gomukhasana; (b) Matsyasana;(c) Shalabhasana; (d) Paschimottanasana
 - 2. Identify the following stick figures of asanas and write their names.

- Ans. (a) Bhujangasana
 - (b) Trikonasana
 - (c) Paschimottanasana
 - (d) Ardha Matsyendrasana

VI. Case-Based Questions: CBQ

1. A 30-year-old hotel manager, weighing 105 kg is suffering from hypertension and is extremely prone to strokes and chronic kidney diseases.

On the basis of the case given, answer the following questions:

- (a) What could possibly be a cause of his hypertension?
- (b) Which asanas should he preferably practice?
- (c) Hypertension is increase in level beyond normal.

(d) Four main causes of hypertension are and

Ans. (a) Obesity

- (b) Ardha Halasana
- (c) Blood pressure
- (d) Genetic, unhealthy lifestyle, Obesity, lack of exercise
- 2.

Look at the given figures and answer the following questions.

- (a) Which disease(s) does the asana shown in Figure A treat?
- (b) Which disease(s) does the asana shown in Figure B treat?
- (c) The asana shown in Figure A is _____
- (d) The asana shown in Figure B is ____
- Ans. (a) Figure A is beneficial of diabetes
 - (b) Figure B is beneficial for obesity.
 - (c) Bhujangasana
 - (d) Ushtrasana

B. Very Short Answer Type Questions

- 1. What is obesity?
- **Ans.** Obesity is a physical condition in which a person has accumulated so much body fat that it might have a negative effect on her/his health.
 - 2. What is meant by Tadasana?
- Ans. The prefix 'tada' means 'palm', so this asana is also referred to as palm tree pose. Alternatively, it is also called the mountain pose.
 - **3.** Define Katichakrasana. Why is it called the lumbar twist pose?
- **Ans.** 'Kati' in Sanskrit means 'waist' and 'Chakra' means 'wheel'. Katichakrasana is a yoga posture that involves a seated spinal twist. It is called the lumbar twist pose because it primarily targets and stretches the muscles of the lumbar spine.
 - 4. What do you mean by Pavanmuktasana?
- Ans. Pavanmuktasana means wind removing pose.

- 5. Define Matsyasana.
- Ans. Matsyasana is a yoga posture that involves lying on the back and arching the chest upward. It is also known as the Fish Pose and helps to stretch the chest, neck, and spine.
 - 6. What is Paschimottanasana?
- Ans. Paschimottanasana is a yoga posture that involves seated forward bending. It helps to stretch the hamstrings, spine, and shoulders. It is also known as the Seated Forward Bend Pose.
 - 7. What do you mean by Ardha Matsyendrasana?
- **Ans.** Ardha meaning half, matsya meaning fish, indra meaning king. It also known as Half Lord of the Fishes pose and Half Spinal Twist Pose is a seated yoga pose. It is named after Yogi Matsyendranath.
 - 8. What is Dhanurasana?
- Ans. 'Dhanur' in Sanskrit means 'bow' and 'asana' means 'pose'. In this pose, the posture of the body resembles a bow with string attached to it.
 - 9. Define Surya Bhedhana Pranayama.
- Ans. 'Surya' in Sanskrit and Hindi means the 'sun' and 'Bhedhana' means 'piercing, enter or breaking through something'. According to Yoga, the Surya nadi or pingala is the right nostril and Chandra nadi or ida is the left nostril. In this pranayama, right nostril is used for inhalation and the left nostril for exhalation. The same process is repeated in each round.
- 10. Which asana is also known as the cobra pose?
- Ans. Bhujangasana
- 11. What do you mean by Supt Vajrasana?
- Ans. Supta Vajrasana is the further extension of Vajrasana. It is Vajrasana in lying position.
 - 12. Define Gomukhasana.
- **Ans.** Gomukhasana, go means cow and mukha means mouth or face, is also known as cow face pose. It is so named because the overall position of the thighs, calves and feet of the person has the appearance of the face of a cow when viewed from above.
 - 13. What is Kapalabhati?
- Ans. In Sanskrit, 'Kapal' means 'skull' and 'Bhati' means 'to shine'. So, this can be translated as skull-shining or skull-cleaning breathing exercise. It purifies the head and the lungs.
 - 14. What is hypertension?
- Ans. An increase in blood pressure beyond normal level is called hypertension.

- **15.** Define Ardha Halasana.
- Ans. In Sanskrit 'Ardha' means 'half' and 'Hala' means 'plough'. It is a preparatory practise of Halasana. So, this is half plough pose.
- 16. Define Makarasana.
- **Ans.** In Sanskrit, 'Makara' means 'crocodile'. The other name of this asana is crocodile pose or relaxation pose. In this pose, the body resembles the shape of a crocodile.

C. Short Answer Type-I Questions

- 1. Write any two benefits of Katichakrasana.
- Ans. i. It stretches the waist region and thus, tones up the lower back region.
 - ii. It strengthens shoulders, neck, arms, abdomen, back and thighs.
 - 2. Explain any two benefits of Ardha Matsyendrasana. (CBSE SP 2021 Term 2)
- Ans. i. It brings relief from stiffness, stress and tension in the back.
 - **ii.** By opening up the chest, it greatly increases the supply of oxygen to the lungs.
 - **3.** Karthik's body weight is 20% more than his ideal body weight. He is a student of class 10. According to you, what can be the reasons for the extra weight of his body?
- **Ans.** In my view reasons for extra weight can include a lack of physical activity, unhealthy diet, genetics, hormonal imbalances, medication side effects, stress and certain medical conditions. It is essential for Karthik to consult with a healthcare professional to determine the underlying cause of his excess weight and receive appropriate advice for a healthy lifestyle.
 - 4. How Shavasana is beneficial for reducing hypertension?
- **Ans.** Shavasana, also known as the Corpse Pose, can be beneficial for reducing hypertension by inducing a state of deep relaxation, which can lower blood pressure. It also helps to reduce stress, which is a significant contributor to high blood pressure.
 - 5. What is the procedure of Dhanurasana?

Ans. Procedure:

- i. Lie in prone position with your arms placed beside your body and feet hip-width apart and chin resting on the ground.
- ii. Now, gently fold your knees and try to place your ankles on your hips.
- iii. Hold your ankles firmly with your hands.

Physical Education Companion – 12

- iv. Inhaling, try to raise your thighs and chest off the ground as high as possible.
- v. Now try to maintain this position for about 5–10 seconds.
- vi. To come back, leave your ankles and lie down straight again.
- **6.** Write any two contraindications of Surya Bhedhana Pranayama.

Ans. Contraindications:

- i. Do not perform this pranayama if undergone brain surgery or heart surgery.
- ii. People with high blood pressure should avoid this.
- 7. Write any two benefits of yogamudra.

Ans. Benefits:

- i. It calms the mind and nerves, and increases blood supply to the head.
- ii. It increases the ability to concentrate and improves digestive function.

D. Short Answer Type-II Questions

- 1. "Asanas can be used as a preventive measure". Comment (CBSE 2020)
- Ans. Recent studies have shown that asanas improve flexibility, strength, and balance; reduce stress and the conditions associated with it. It enables us to become fully aware of our body. At the same time, it helps in reducing stress and anxiety, weight, hypertension, sleep disturbances, symptoms of lower back pain and fatigue. The flexibility of the spine increases, joints become more mobile, the lymphatic system and metabolism are stimulated, circulation of blood is boosted, blood pressure is normalized and stabilised, the nervous system is soothed and sharpened, and the skin becomes clear and fresh.
 - **2.** Make a mind map showing the role of yoga in preventing lifestyle diseases.

OR

What is the role of asanas in preventing commonlifestyle diseases?(CBSE 2019, 2020)

- Ans. Asanas play an important role in preventing the onset of many adverse health conditions. It is a simple and economical preventive measure that can help in treating most of the widespread noncommunicable lifestyle diseases and improving the health of people. As a preventive measure, asanas are useful in many ways:
 - Mental health can be improved by performing the suitable asanas.

- Bone diseases can be prevented by performing suitable asanas.
- The various types of asanas involve twisting the body, backward and forward bends and other activities that promote digestion and help in weight loss.
- 3. What are some causes of obesity?
- Ans. Obesity is caused by the following factors:
 - Genetics: A person whose parents are obese can develop obesity.
 - Overeating: Overeating is when the intake of calories is much more than what the body actually needs. This results in regular deposition of unused calories causing obesity.
 - Frequency of eating: Eating frequently leads to deposition of unused calories.
 - Physical inactivity: Sedentary people burn fewer calories than those who are physically active, resulting in weight gain.
 - Psychological factors: For some people, emotions influence eating habits which is termed as binge eating. It occurs out of sadness, boredom, stress or anger.
 - Which asanas are helpful in reducing obesity? Explain the procedure and contraindications of any one asana. (CBSE 2019)
- Ans. Several yoga asanas can be helpful in reducing obesity, including: Tadasana, Katichakrasana, Pavanmuktasana, Matsyasana, Halasana, Paschimottansana, Ardha Matsyendrasana, Dhanurasana, Ushtrasana, Surya Bhedhana Pranayama.

One asana that can be particularly effective in reducing obesity is the Ardha Matsyendrasana (Half Lord of the Fishes Pose). Here's how to perform this asana:

Procedure:

- Sit on the floor with your legs straight in front of you.
- Bend your right knee and place your right foot on the floor outside your left knee.
- Twist your torso to the right, placing your left elbow on the outside of your right knee.
- Hold the pose for 30-60 seconds, breathing deeply.
- Repeat on the other side.
- Contraindications for this asana include:
- People with severe back or spinal injuries should avoid this pose.

- Pregnant women should not perform this pose.
- People with digestive issues such as ulcers, hernias, or colitis should avoid this pose.
- 5. How do the following affect obese or overweight people?
 - (a) Tadasana
 - (b) Halasana
 - (c) Dhanurasana
 - (d) Ardha Matsyendrasana
- Ans. (a) Tadasana, or the Mountain Pose, can be beneficial for obese or overweight people by improving posture, stretching the spine and legs, and increasing overall body awareness and mindfulness. It can also help to improve balance and coordination, which can be beneficial for overweight individuals who may be at higher risk of falls or injuries.
 - (b) Halasana, or the Plow Pose, can be helpful for obese or overweight people by stretching the spine and shoulders, toning the abdominal muscles, and stimulating the thyroid gland, which can help to regulate metabolism. However, this asana should be avoided by people with neck or back injuries, high blood pressure, or heart problems.
 - (c) Dhanurasana, or the Bow Pose, can be beneficial for obese or overweight people by strengthening the back and abdominal muscles, improving digestion, and stretching the entire body. However, this asana should be avoided by people with lower back injuries, hernias, or high blood pressure.
 - (d) Ardha Matsyendrasana, or the Half Lord of the Fishes Pose, can be helpful for obese or overweight people by stretching the spine and shoulders, improving digestion, and stimulating the abdominal organs. However, this asana should be avoided by people with severe back or spinal injuries, pregnant women, or people with digestive issues such as ulcers, hernias, or colitis.
 - 6. How do the following affect people with diabetes?
 - (a) Bhujangasana
 - (b) Paschimottanasana
 - (c) Pavanmuktasana
 - (d) Gomukhasana
- Ans. (a) Bhujangasana, or the Cobra Pose, can be beneficial for people with diabetes by stretching the spine and abdomen,

stimulating the digestive organs, and improving blood circulation. It can also help to reduce stress and improve overall body awareness. However, people with lower back injuries or hernias should avoid this asana.

- (b) Paschimottanasana, or the Seated Forward Bend, can be helpful for people with diabetes by stimulating the pancreas and kidneys, improving digestion, and reducing stress. However, people with lower back injuries, hernias, or high blood pressure should avoid this asana.
- (c) Pavanmuktasana, or the Wind-Relieving Pose, can be beneficial for people with diabetes by massaging the digestive organs, reducing gas and bloating, and improving blood circulation. However, people with knee or hip injuries should avoid this asana.
- (d) Gomukhasana, or the Cow Face Pose, can be helpful for people with diabetes by stretching the hips, shoulders, and chest, improving posture, and reducing stress. However, people with shoulder or knee injuries should avoid this asana.
- 7. Explain about the procedure and advantages of Bhujangasana. (CBSE 2019)

Ans. Procedure:

- First, you must lie flat on your stomach. Place your hands on the side and make sure the toes of each foot touches each other.
- Move your hands to the front, keeping them at the shoulder level, and place your palms on the floor.
- Balancing your body's weight on the palms, breathe in and slowly raise your head and trunk. Your arms should be bent at your elbows at this stage.
- Work towards arching your neck backward. This is done to assume the pose of a cobra with a raised hood. It is important that your shoulder blades remain firm and that your shoulders are away from your ears.
- Press your hips, thighs and feet to the floor.
- Hold the position for 15–30 seconds while breathing normally.
- To undo the pose, slowly bring your hands back to the sides. Rest your head on the ground by bringing your forehead in contact with the floor. Place your hands under your head. Then slowly rest your head on one side and breathe.

Advantages:

It puts the abdominal muscles and shoulders to work, increasing the circulation of the blood and oxygen in those regions in which they turn. It raises the body temperature and boosts the body's metabolism to the levels that are beneficial at controlling diabetes. It fights acidity, indigestion and constipation, and helps the practitioner lose weight. It enhances the function of the liver, kidney, pancreas and gall bladder. It strengthens the arms and shoulders.

- 8. How do the following affect people with asthma?
 - (a) Urdhwahastottanasana
 - (b) Uttanmandukasana
 - (c) Gomukhasana
 - (d) Vakrasana
 - (e) Bhujangasana
 - (f) Tadasana
 - (g) Matsyasana
- Ans. (a) Urdhwahastottanasana, or the Raised Arms Pose, can be beneficial for people with asthma by improving breathing capacity, stretching the chest and shoulders, and reducing stress. However, people with shoulder or neck injuries should avoid this asana.
 - (b) Uttanmandukasana, or the Extended Frog Pose, can be helpful for people with asthma by opening up the chest and lungs, reducing stress and anxiety, and improving digestion. However, people with knee or hip injuries should avoid this asana.
 - (c) Gomukhasana, or the Cow Face Pose, can be beneficial for people with asthma by opening up the chest and lungs, improving posture, and reducing stress. However, people with shoulder or knee injuries should avoid this asana.
 - (d) Vakrasana, or the Spinal Twist Pose, can be helpful for people with asthma by improving lung function, reducing stress and anxiety, and improving digestion. However, people with back injuries should avoid this asana.
 - (e) Bhujangasana, or the Cobra Pose, can be beneficial for people with asthma by opening up the chest and lungs, improving breathing capacity, and reducing stress. However, people with lower back injuries should avoid this asana.
 - (f) Tadasana, or the Mountain Pose, can be helpful for people with asthma by improving

posture, reducing stress, and improving overall body awareness. However, people with balance issues or injuries should practice this asana with caution.

- (g) Matsyasana, or the Fish Pose, can be beneficial for people with asthma by improving lung capacity, reducing stress and anxiety, and stretching the chest and neck. However, people with neck or back injuries should avoid this asana.
- **9.** How do the following affect people with hypertension?
 - (a) Tadasana (b) Katichakrasana
 - (c) Uttanpadasana (d) Ardha Halasana
 - (e) Bhujangasana (f) Shavasana
- Ans. (a) Tadasana, or the Mountain Pose, can be beneficial for people with hypertension by improving posture, reducing stress, and improving overall body awareness. However, people with balance issues or injuries should practice this asana with caution.
 - (b) Katichakrasana, or the Waist Rotation Pose, can be helpful for people with hypertension by stretching the spine, reducing stress and anxiety, and improving digestion. However, people with back or neck injuries should avoid this asana.
 - (c) Uttanpadasana, or the Raised Leg Pose, can be beneficial for people with hypertension by improving circulation, reducing stress, and strengthening the abdominal muscles. However, people with low back pain or hernias should avoid this asana.
 - (d) Ardha Halasana, or the Half Plow Pose, can be helpful for people with hypertension by improving digestion, reducing stress, and stretching the lower back and legs. However, people with back or neck injuries, hernias, or high blood pressure should avoid this asana.
 - (e) Bhujangasana, or the Cobra Pose, can be beneficial for people with hypertension by stretching the chest and abdomen, improving circulation, and reducing stress. However, people with lower back injuries or hernias should avoid this asana.
 - (f) Shavasana, or the Corpse Pose, can be helpful for people with hypertension by reducing stress, improving sleep, and promoting relaxation. However, people with mobility issues or back pain may need to modify this pose to be more comfortable.

- 10. Write any three benefits of Ardha Halasana.
- Ans. Benefits of Ardha Halasana:
 - i. This asana strengthens the thigh muscles and calf muscles.
 - ii. It stretches leg muscles and ligaments of leg.
 - iii. It improves digestion and removes constipation.
 - 11. What is Yogamudra? Write any two benefits of it.
- **Ans.** Yogamudra is a seated yoga pose that involves bending forward and reaching the arms around the back to clasp the hands. The name of the pose comes from the Sanskrit words "yoga," meaning union or connection, and "mudra," meaning gesture or seal.

Two benefits of Yogamudra are:

- i. It helps to stretch and strengthen the spine, hips, and shoulders, as well as improve flexibility and range of motion.
- ii. It can help to calm the mind, reduce stress and anxiety, and improve focus and concentration.
- **12.** Make a table showing the benefits and contraindications of any three asanas to prevent diabetes.
- Ans. The following table shows the benefits and contraindications of three asanas that can help prevent or manage diabetes:

Asana	Benefits	Contraindication
Bhujangasana (Cobra Pose)	Stimulates the pancreas, improves circulation and digestion, strengthens the abdominal muscles, and reduces stress and fatigue	Avoid this pose if you have a back injury, hernia, or carpal tunnel syndrome.
Paschimottanasana (Seated Forward Bend)	Regulates the insulin levels, improves circulation, and reduces stress and anxiety.	Avoid this pose if you have a back injury, herniated disc, or hip or knee pain.
Katichakrasana (Lumbar Twist Pose)	Stimulates the pancreas and abdominal organs, improves digestion, and stretches the spine and hips.	Avoid this pose if you have a back injury, herniated disc, or sciatica.

- **13.** Write the procedure of Anuloma-Viloma.
- Ans. Procedure of Anulom-vilom:
 - 1. Sit in Padmasana or any comfortable meditative posture.
 - **2.** Keep the head and spine erect, and close your eyes.
 - 3. Peacefully pay attention to the breath.
 - 4. Keep the hands on the respective knees.
 - 5. Adopt *nasagran mudra* of the right hand and *jnana mudra* of the left hand.
 - 6. Close the right nostril with the thumb.
 - **7.** Keeping the respiration rate slow, deep and silent, inhale through the left nostril and exhale through the right nostril.
 - 8. Inhale through the right nostril again.
 - **9.** Keeping the respiration rate slow, deep and silent, exhale through the left nostril.
 - **14.** Explain the procedure of any two asanas for the prevention and management of hypertension.
- Ans. Here are the procedures for practicing Makarasana and Shavasana for the prevention and management of hypertension:

Procedure of Makarasana:

- i. Lie down on your stomach.
- ii. Keep the legs at a comfortable distance, with heels inside and toes pointing outward.
- iii. Now, fold your arms and elbows, and keep them under the head.
- iv. Place your head on the cushion of the arms. Close your eyes and relax.
- v. To release the pose, bring the arms alongside the body and both the legs together.

Procedure of Shavasana:

- i. Lie flat on the floor and make sure you are comfortable. Close your eyes.
- **ii.** Place your legs in such a way that your toes are facing sideways. The legs should be placed comfortably apart.
- iii. Place your arms along your body with open palms facing upwards. While doing so, leave space between your body and arms.
- iv. After reaching a position, direct your attention to every area of your body, starting from your toes.
- v. Take slow but deep breaths, allowing your body to go into a state of intense relaxation. Avoid falling asleep.

Physical Education Companion - 12 3

- vi. Once your body feels relaxed and refreshed, roll to one side, keeping your eyes closed. Hold the position for a minute and rise to sit in Sukhasana.
- vii. Breathe deeply, become aware of your surroundings before you open your eyes again.
- 15. Write any three benefits of Sheetali Pranayama.
- Ans. Benefits of Sheetli Pranayama:
 - i. This pranayama purifies the blood.
 - ii. It has a cooling effect on the body.
 - iii. It is beneficial for people suffering from high blood pressure.
- **16.** List down any three asanas used for preventing asthma and write any two benefits of it.

(CBSE SP 2021 Term 2)

Ans. Three asanas are given below: These can be helpful in preventing asthma, along with their benefits:

Dhanurasana (Bow Pose): Dhanurasana helps to expand the chest and improve lung capacity, which can be beneficial for individuals with asthma. It also strengthens the back and improves posture.

Ushtrasana (Camel Pose): Ushtrasana opens up the chest and increases lung capacity, which can be helpful for individuals with asthma. It also strengthens the back, neck, and legs, and improves digestion.

Vakrasana (Twisted Pose): Vakrasana helps to stretch and strengthen the muscles around the lungs, which can improve breathing and prevent asthma attacks. It also helps to improve digestion and reduce stress and anxiety.

E. Long Answer Type Questions

- 1. Discuss the impact of asanas on health.
- Ans. We see the health of human beings is deteriorating day by day and lifestyle diseases are spiking due to factors such as sedentary lifestyle, bad diet and increasing presence of bacteria, parasites and viruses in the environment. Globally, the challenge is to

develop new and stronger antibiotics and drugs to control and kill these new viruses and bacteria. In such circumstances, asanas play an important role in preventing the onset of many adverse health conditions.

Asana is a simple and economical preventive measure that can help in treating most of the widespread non-communicable lifestyle diseases and improve the health of people. The aim of an asana is to clean the body from within, fix the internal imbalance and then strengthen the exteriors. It enables us to become fully aware of our body. It helps in reducing stress and anxiety, weight, hypertension, sleep disturbances, symptoms of lower back pain and fatigue. The flexibility of the spine increases, joints become more mobile, the lymphatic system and metabolism are stimulated, circulation of blood is boosted, blood pressure is normalised and stabilised, the nervous system is soothed and sharpened, and the skin becomes clear and fresh.

- Briefly explain the symptoms and causes of asthma. Make a table explaining the procedure, benefits and contraindications of any two asanas to prevent asthma. (CBSE 2018)
- Ans. Asthma is a disease associated with respiratory tracks (air ways in the lungs)

Symptoms: Excessive amount of mucus, coughing, heavy breathing, wheezing or whistling, shortness of breath, swelling of air ways, chest tightness, fatigue,

Causes of Asthma:

- Allergy
- Heredity
- Occupational Asthma (caused by inhaling fumes, gases, dust or other potentially harmful substances in work place)
- Cigarette smoking/passive smoking and polluted air
- Exposure to animals that cause allergy (pets)

Here is a table explaining the procedure, benefits, and contraindications of two asanas that can be helpful in preventing asthma:

Asana		Procedure		Benefits		Contraindications
Urdhwahastottanasana	1.	Stand with feet hip-width apart and arms at sides.	1.	Stretches the chest and lungs, improving breathing.	1.	High blood pressure.
	2.	Inhale and reach arms overhead, palms facing each other.	2.	Improves posture and digestion.	2.	Neck or back injury.
	3.	Lengthen through the spine and hold for several breaths.	3.	Reduces stress and anxiety.	3.	
	4.	Exhale and release arms back to sides				
Asana		Procedure		Benefits		Contraindications
Uttanmandukasana	1.	Kneel on the floor with toes touching and sit back on heels.	1.	Improves lung capacity and reduces stress and anxiety.	1.	Knee or ankle injury.
	2.	Place hands on lower back and inhale deeply.	2.	Stretches the chest and lungs, improving breathing.	2.	High blood pressure.
	3.	Exhale and reach arms overhead, palms facing each other.	3.	Strengthens the back and shoulders.	3.	Herniated disk.
	4.	Hold for several breaths and release.				

 List down any four asanas used for prevention of asthma. Explain the procedure for administration of any one of them with help of a stick diagram. (CBSE SP 2022)

Ans. Asthma: Sukhasana, Chakrasana, Gomukhasana, Parvatasana, Bhujangasana, Paschimottanasana, Matsyasana, Anulom-Vilom

4. Briefly explain the administration of Pavanmuktasana along with its contraindication and draw stick diagram.

(CBSE SP 2021 Term 2)

Ans. PAVANMUKTASANA:

Procedure

- i. Ideally, this asana should be performed in the morning in order to get rid of gas inside your body. It is particularly effective to do it as the first step of your morning routine since it will make other poses easier. If not, then allow at least four to six hours to pass after your meal.
- ii. Lie on your back on a smooth and flat surface and keep the legs straight and relax.
- iii. Inhaling slowly, raise your legs and bend the knees. Bring them gradually towards the chest till your thighs touch the stomach.
- iv. Clasp your hands around your legs to hug your knees. Lock your fingers to secure the position.
- v. Next, try to touch the knee with the nose tip.
- vi. Hold this position for 20 to 30 seconds.
- vii. Exhale slowly and undo the pose after you roll from side to side about three to five times. Relax.

viii. Practise 3 to 5 cycles daily.

Contraindications

i. Those who have had abdominal surgery recently or are suffering from hernia or piles must avoid this asana.

- **ii.** Pregnant women must avoid this asana in order to avoid causing stress to the body or causing complications.
- iii. It should also be avoided by patients of heart problems, hyper-acidity, high blood pressure, slipped disc, asthma, hernia, back and neck problems, or a testicle disorder.
- iv. An individual with a neck injury should practise this asana with her/his head resting on the floor, and only with the approval of a doctor.

- **5.** Discuss the procedure, benefits and contraindications of:
 - (a) Tadasana
 - (b) Halasana
 - (c) Dhanurasana
 - (d) Ardha Matsyendrasana
 - (e) Bhujangasana
 - (f) Paschimottanasana
 - (g) Pavanmuktasana
 - (h) Sarala Matyasana
 - (i) Ushtrasana
 - (j) Gomukhasana
 - (k) Anuloma-Viloma
 - (I) Kapalbhati
 - (m) Shavasana
 - (n) Vakrasana
 - (o) Shalabhasana.
- Ans. (a) Tadasana: Stand straight with your feet together, inhale and raise your arms above your head, interlock your fingers and turn your palms upward. Benefits include improved posture, reduced back pain and increased lung capacity. Contraindications include low blood pressure and headache.
 - (b) Halasana: Lie down on your back, raise your legs up and over your head, placing your hands on your lower back for support. Benefits include improved digestion, reduced stress and improved thyroid function. Contraindications include neck injury, hernia and high blood pressure.

- (c) Dhanurasana: Lie down on your stomach, bend your knees and grasp your ankles, inhale and lift your chest and legs up. Benefits include improved digestion, reduced stress and improved flexibility. Contraindications include hernia and high blood pressure.
- (d) Ardha Matsyendrasana: Sit with your legs outstretched, bend your right leg and place your right foot on the outside of your left knee, twist your torso to the right and hold your left knee with your right hand. Benefits include improved digestion, reduced stress and improved spinal flexibility. Contraindications include spinal injury and hernia.
- (e) Bhujangasana: Lie on your stomach, place your hands on the floor near your shoulders, inhale and lift your chest and head up. Benefits include improved posture, reduced back pain and increased lung capacity. Contraindications include hernia and high blood pressure.
- (f) Paschimottanasana: Sit with your legs outstretched, inhale and raise your arms above your head, exhale and bend forward, reaching for your toes. Benefits include improved digestion, reduced stress and improved spinal flexibility. Contraindications include hernia and low blood pressure.
- (g) Pavanmuktasana: Lie down on your back, bend your knees towards your chest and interlock your fingers around your shins. Benefits include improved digestion, reduced stress and improved spinal flexibility. Contraindications include hernia and high blood pressure.
- (h) Sarala Matyasana: Sit with your legs outstretched, bend your right knee and place your right foot on the outside of your left knee, twist your torso to the right and place your left hand on your right knee. Benefits include improved digestion, reduced stress and improved spinal flexibility. Contraindications include spinal injury and hernia.
- Ushtrasana: Kneel on the floor, bend backwards and hold your heels with your hands. Benefits include improved posture, reduced back pain and improved lung capacity. Contraindications include neck injury and high blood pressure.
- (j) Gomukhasana: Sit cross-legged, bring your left arm up and over your left shoulder, bring your right arm behind your back and clasp your hands. Benefits include improved

posture, reduced back pain and improved shoulder flexibility. Contraindications include shoulder injury and neck injury.

- (k) Anuloma-Viloma: Sit cross-legged, close your right nostril with your thumb and inhale through your left nostril. Close your left nostril with your ring finger and exhale through your right nostril. Benefits include improved breathing and reduced stress. Contraindications include nasal congestion and sinusitis.
- (I) Kapalbhati: Sit cross-legged, inhale and exhale rapidly through your nostrils, contracting your abdominal muscles with each exhale. Benefits include improved digestion, reduced stress and increased lung capacity. Contraindications include hernia and high blood pressure.
- (m) Shavasana: Lie down on your back with your arms and legs relaxed, close your eyes and breathe deeply. Benefits include reduced stress and improved relaxation. Contraindications include low blood pressure and asthma.
- (n) Vakrasana, also known as the Half Spinal Twist Pose, involves twisting the spine, stretching the back muscles, and improving digestion. To perform, sit with legs stretched and twist the upper body to one side while keeping the spine erect. Contraindications include spinal injuries, hernia, and ulcerative colitis.
- (o) Shalabhasana, or the Locust Pose, strengthens the back muscles and helps improve posture. Lie on the stomach with hands under the thighs, then lift the legs and chest off the ground. Benefits include relief from lower back pain and improved flexibility. Contraindications include herniated discs, peptic ulcers, and recent abdominal surgeries.
- 6. Explain the procedure, benefits and contraindications of Supta Vajrasana.
- Ans. Procedure of Supta Vajrasana:
 - i. Sit comfortably in Vajrasana. Slowly bend your back with the support of one elbow first and then with the other elbow.
 - ii. Allow your elbows to support the body.
 - iii. Now, stretch your arms behind and hold one elbow/arm with the hand of another arm.
 - iv. To come back to the original position, first take out your hands and place them by the sides of your body.

v. Now, with the help of elbows come to the initial position.

Benefits

- This asana improves the digestive system and removes constipation.
- It strengthens the abdominal muscles.
- It is useful in the management of high blood pressure and sciatica.
- It improves blood circulation and induces calmness.
- It is beneficial for asthma and respiratory disorders.
- It tones the spinal nerves, makes the back flexible and realigns rounded shoulders.
- It helps to fill the lungs to their maximum capacity and bring more oxygen.
- It increases the circulation in brain.
- It regulates the functioning of the adrenal gland.

Contraindications

- i. Do not practise this asana if suffering from high blood pressure.
- ii. Avoid this asana in the case of slipped disc or other knee or back problems and if suffering from vertigo.
- 7. Explain the procedure, benefits and contraindications of Mandukasana.

Ans. Procedure of mandukasana:

- i. Sit comfortably in Vajrasana.
- ii. Make the fists with thumbs inside.
- iii. Place the two fists near the navel and press the navel area.
- iv. Exhale and slowly bend forward from the waist and lower the chest.
- v. Keep the head and neck raised and look forward in the bent position.
- vi. Keep the breath outside in this position and maintain it for 5–10 seconds.
- vii. To release this posture, inhale and slowly raise the trunk up to kneeling position.
- viii. Remove your fists from the navel area and sit in Vajrasana.
- ix. Repeat this asana 3–5 times.

Benefits

• This asana is beneficial for all organs of the body.

- Mandukasana is beneficial for the people suffering from diabetes, constipation and digestive disorders.
- It can reduce extra fat in the belly, waist and thighs and helps in weight management.
- It helps in eliminating gas from the stomach.
- It helps tone muscles of the shoulder and abdomen.

Contraindications

- i. Avoid this asana in case of back pain, slipped disc or any other spine problems.
- ii. Pregnant women should avoid this asana.
- iii. Avoid this in case of any recent surgery of the abdomen, chest, knees or legs.
- iv. In case of ankle injury, high BP, insomnia or mirgrane, this asana should be avoided.
- 8. Explain the procedure, benefits and contraindications of Uttanpadasana.
- Ans. Refer to page 66 of textbook.
 - **9.** Explain the procedure, benefits and contraindications of Surya Bhedhana Pranayama.
- Ans. Refer to page 57 of textbook.
 - **10.** Explain the procedure, benefits and contraindications of Ardha Halasana.
- Ans. Refer to pages 66-67 of textbook.
- **11.** Write the benefits and contraindications of Makarasana.
- Ans. Refer to page 67-68 of textbook.
- 12. Write the benefits and contraindication of Matsyasana. (CBSE 2022)
- Ans. Refer to page 54 of textbook.
- What is Obesity? Draw stick diagrams of any two asanas recommended to control obesity and explain their procedure. (CBSE 2022)
- Ans. Obesity is a medical condition characterized by excessive accumulation of body fat leading to negative health consequences. It is usually determined by calculating the body mass index (BMI) of an individual, which is the ratio of body weight to the square of height. A BMI of 30 or higher is considered obese.

Two asanas recommended for controlling obesity are:

Halasana (Plow Pose)

Halasana is an excellent asana for weight loss as it stretches and tones the muscles of the entire body, especially the abdomen and thighs. Here's how to perform Halasana:

- i. Lie flat on your back with your arms at your sides and your palms facing down.
- ii. Inhale deeply and lift your legs off the ground, keeping them straight.
- iii. Exhale and bring your legs up and over your head until your toes touch the ground behind your head.
- iv. Place your hands on your back for support and hold the pose for 30 seconds to 1 minute.
- v. To come out of the pose, slowly lower your legs back down to the ground, one vertebra at a time.

Paschimottanasana (Seated Forward Bend)

Paschimottanasana is a seated forward bend that helps to stretch the hamstrings, back, and spine. It also stimulates the digestive system and helps to reduce belly fat. Here's how to perform Paschimottanasana:

- i. Sit on the ground with your legs stretched out in front of you and your toes pointing up.
- ii. Inhale deeply and raise your arms above your head.
- iii. Exhale and bend forward from the hips, reaching for your toes with your hands.
- iv. Hold the pose for 30 seconds to 1 minute, breathing deeply and relaxing your body.
- v. To come out of the pose, slowly roll your body up, one vertebra at a time, and return to a seated position.

Stick Diagrams:

Paschimottanasana

Halasana F. Value-Based Question

Neeti along with her father was regular at district park in early morning. She realised that most of the children are obese. She along with her few classmates wanted to help those children. She discussed with her physical education teacher and the principal of the school. School decided to organise awareness rally for the neighbourhood.

Physical Education Companion – 12

Answer the following questions based on the above passage:

- 1. How can be obesity prevented? Give two ways.
- 2. Give any two disadvantages of obesity.
- 3. What values are shown by Neeti and her classmates? (CBSE 2015)

Ans.

- 1. Obesity can be prevented by avoiding overeating, and doing asanas like vajrasana and trikonasana.
- 2. Hypertension, liver problem.
- 3. Sharing knowledge, concern for others, etc.

CHAPTER 4

PHYSICAL EDUCATION AND SPORTS FOR CWSN (CHILDREN WITH SPECIAL NEEDS- *DIVYANG*)

P. 88–93

A. Objective Type/ Multiple-Choice Questions

- I. Multiple-Choice Questions:
 - 1. The Special Olympics begun in
 - (a) 1948 (b) 1958
 - (c) 1968 (d) 1978
- Ans. (c) 1968
 - 2. Who among the following was the founder of Special Olympics games?
 - (a) John F Kennedy
 - (b) Eunice Kennedy Shriver
 - (c) Baron de Coubertin
 - (d) Sir Dorabji Tata
- Ans. (b) Eunice Kennedy Shriver
 - 3. Special Olympics logo is based on the sculpture:
 - (a) Joy and Happiness to All the Children of the World
 - (b) Punctuality and Happiness to All the Children of the World
 - (c) Contentment and Happiness to All the Children of the World
 - (d) Joy and Discipline to All the Children of the World
- Ans. (a) Joy and Happiness to All the Children of the World
 - Special Olympics has more than _____ Olympic-type individual and team sports.
 - (a) 40 (b) 30
 - (c) 50 (d) 70
- **Ans.** (b) 30
 - 5. _____ is an early childhood play programme for children with and without intellectual disabilities, ages 2 to 7 years old.
 - (a) Disabled Athletes (b) Abled Athletes
 - (c) Old Athletes (d) Young Athletes
- Ans. (d) Young Athletes
 - 6. In the Special Olympics competitions, ______ are awarded medals.
 - (a) first four place winners
 - (b) first three place winners
 - (c) first five place winners

- (d) first eight place winners
- Ans. (b) first three place winners
 - 7. _____are the parallel games to Olympics.
 - (a) Special Olympics
 - (b) Deaflympics
 - (c) Paralympics
 - (d) Asian Games
- Ans. (c) Paralympics
 - 8. The term 'Paralympic' was first used in the 1988 Summer Paralympics in
 - (a) Rome, Italy. (b) Tokyo, Japan
 - . (c) Atlanta, USA. (d) Seoul, South Korea.
- Ans. (d) Seoul, South Korea.
 - **9.** Which of these is not one of the colours of the three crescents in the Paralympic logo?
 - (a) Red (b) Yellow
 - (c) Blue (d) Green
- Ans. (b) Yellow
- 10. There are currently _____Paralympic sports.
 - (a) 22 (b) 25
 - (c) 27 (d) 28
- **Ans.** (d) 28
 - 11. Sir Ludwig Guttmann started the
 - (a) Olympic movement.
 - (b) Paralympic movement.
 - (c) Special Olympic movement.
 - (d) Deaflympic movement.
- Ans. (b) Paralympic movement.
 - 12. The motto of the Paralympic Games is
 - (a) Spirit in Motion. (b) Spirit of Motion.
 - (c) Motion of Spirit. (d) Spirit and Motion.
- Ans. (a) Spirit in Motion.
 - 13. Which of the following is not ataxia impairment?
 - (a) Cerebral palsy (b) Friedreich's ataxia
 - (c) Down's syndrome (d) Multiple sclerosis
- Ans. (c) Down's syndrome
 - 14. The hand shapes that are formed in Deaflympics logo represent:
 - (a) 'ok', 'good' and 'great'.
 - (b) 'well', 'good' and 'great'.
 - (c) 'ok', 'brilliant' and 'great'.
 - (d) 'ok', 'good' and 'carry on'.
- Ans. (a) 'ok', 'good' and 'great'.

Physical Education Companion – 12

- **15.** Which of the following is not a criterion of participating in Deaflympics?
 - (a) The participant must have hearing loss of at least 55 decibels in her/his better ear.
 - (b) Hearing aids and cochlear implants are allowed.
 - (c) The athlete cannot be guided by sounds.
 - (d) A drug-free sports environment is enforced for participants.
- Ans. (b) Hearing aids and cochlear implants are allowed.
 - **16.** Which of these is not one of the results of physical activities in children with special needs?
 - (a) Important in confidence
 - (b) Improvement in endurance
 - (c) Increase in depression
 - (d) Better hand-eye coordination
- Ans. (c) Increase in depression
 - 17. What is the most important, while dealing with CWSN? (CBSE 2020)
 - (a) Time (b) Patience
 - (c) Sympathy (d) All of these
- Ans. (c) Sympathy
 - 18. Watching others play and enjoy which in turn motivates the child with special needs to participate is a part of which kind of strategy?
 - (a) Mental (b) Psychological
 - (c) Physical (d) Social

II. Match the following:

Ans. (d) Social

List I – Event List II – Year

(CBSE SP 2022)

- (i) The Special Olympics began. (1) 1988
- (ii) The term 'Paralympic' was (2) 1924 officially used.
- (iii) The International Paralympic (3) 1968 Committee was founded.
- (iv) Deaflympics were first held in. (4) 1989

Select the correct set of options:

- (a) (i)–(3), (ii)–(1), (iii)–(4), (iv)–(2)
- (b) (i)-(2), (ii)-(4), (iii)-(1), (iv)-(3)
- (c) (i)-(1), (ii)-(2), (iii)-(3), (iv)-(4)
- (d) (i)-(4), (ii)-(3), (iii)-(2), (iv)-(1)
- **Ans.** (a) (i)–(3), (ii)–(1), (iii)–(4), (iv)–(2)

III. Assertion-Reason Type Questions: Given below are the two statements labelled Assertion (A) and Reason (R).

A: Physical activities sharpen the mind, allowing the child with disability to have enhanced cognitive skills.

R: Physical activities are performed in an interactive environment. By taking part in such group activities, the social life of the child improves and she/he learns to establish relationships with her/his peers.

In the context of the two statements given above, which one of the following is correct?

- (a) Both (A) and (R) are true and (R) is the correct explanation of (A).
- (b) Both (A) and (R) are true but (R) is not the correct explanation of (A).
- (c) (A) is true, but (R) is false.
- (d) (A) is false, but (R) is true.
- Ans. (b) Both (A) and (R) are true but (R) is not the correct explanation of (A).

IV. Data-Based Questions:

Read the passage with statistics given below and answer the questions that follow.

Though the game started with just 148 athletes from nine countries, 336 participants from 27 nations participated in the 2015 Winter edition, while 3148 athletes from 97 countries competed in the 2017 summer edition.'

- 1. Which games are being referred to in the above statistics?
 - (a) Paralympics (b) Olympics
 - (c) Deaflympics (d) Special Olympics
- 2. These games are held every _____ years.
 - (a) 4 (b) 5
 - (c) 6 (d) 7
- 3. These games were first held in 1924 in _____
 - (a) Nuremberg, German
 - (b) Milan, Italy
 - (c) Helsinki, Finland
 - (d) Paris, France
- 4. The centre of the logo of these games represents
 - (a) the iris of the eye.
 - (b) the cornea of the eye.
 - (c) the pupil of the eye.
 - (d) the eyeball of the eye.

CBO

Ans. 1. (c) Deaflympics

- 2. (a) 4
- 3. (d) Paris, France
- 4. (a) the iris of the eye.

V. Picture-Based Questions:

CBQ

- Ans. 1. Special Olympics
 - 2. Wheelchair Basketball
 - 3. Deafylympics
 - 4. Paralympics

VI. Case-Based Questions:

CBQ

Look at the given figures and answer the following questions.

- (a) What do the above figures represent?
- (b) How many sports do each of these organise?
- (c) Who were the founders of these sports movements?
- (d) Which were the first host cities of these games?
- Ans. (a) Figure A represents Special Olympics and figure B represents Paralympics games.
 - (b) Special Olympics organizes 30 games and Paralympics organizes 28 games.
 - (c) Eunice Kennedy Shriver founded Special Olympics and Sir Ludwig Guttmann founded Paralympics.

- (d) Chicago (USA) first hosted Special Olympics and Rome (Italy) first hosted Paralympics.
- **2.** In relation to the pictures, answer the following questions.

- Figure A
- (a) What is the mission of the Figure A organisation?
- (b) What is the Motto of the Figure A organisation?
- (c) Until 1965 the games in Figure B were known as _____
- (d) Figure B games are conducted after every _____years.
- Ans. (a) Mission of Special Olympics: To provide sports training and organise athletic competitions in various Olympic-type sports for children and adults with intellectual disabilities throughout the year.
 - (b) Motto of Deafylympics: *"Per Ludos Aequalitas"* which is Latin for "Equality through Sports".
 - (c) International Games for the Deaf
 - (d) 2 years

B. Very Short Answer Type Questions

- 1. What is Special Olympics? (CBSE 2020)
- **Ans.** Special Olympics is an international organisation that provides sports training and competition for children and adults with intellectual disabilities, promoting inclusion, empowerment, and improved physical and social skills.
 - 2. Who founded Special Olympics?
- Ans. Special Olympics was founded by Eunice Kennedy Shriver in 1968.
 - 3. What is Unified Sports Programme?
- **Ans.** Unified sports is a program that promotes social inclusion and friendship through sports by bringing together athletes with or without intellectual disabilities on the same team.
 - 4. Who oversees the Paralympic Games?
- **Ans.** The International Paralympic Committee (IPC) oversees the Paralympic Games. The IPC is responsible for organising and supervising the Paralympic Games, as well as promoting and developing the Paralympic movement worldwide.

- 5. Who started the Paralympic Games?
- Ans. The Paralympic Games were started by Sir Ludwig Guttmann, a neurologist who organised the first competition for wheelchair athletes in 1948 at Stoke Mandeville Hospital in England.
 - 6. What are the Deaflympics about?
- Ans. The Deaflympics are an international multi-sport event for deaf athletes. The games provide a platform for deaf athletes to compete at an elite level and promote deaf culture and awareness.

C. Short Answer Type-I Questions

- 1. In which year did Special Olympics begin?
- Ans. Special Olympics began in 1968, when Eunice Kennedy Shriver organised the first international sports competition for individuals with intellectual disabilities at Soldier Field in Chicago, USA.
 - 2. How many events of Special Olympics are conducted in a year?
- **Ans.** Special Olympics offers year-round sports training and competition for individuals with intellectual disabilities, with over 30 Olympic-type sports and tens of thousands of events held annually across the globe.
 - 3. What is Special Olympics logo based on?
- **Ans.** The Special Olympics logo has three asymmetrical crescents called agito, circling around a central point. The crescents are red, blue and green in colour. The colours represent the diversity of the athletes and the unity of the Special Olympics movement.
 - **4.** Which programmes are conducted under Special Olympics across the world?
- Ans. Special Olympics offers a variety of programs across the world, including year-round sports training and competition for individuals with intellectual disabilities, as well as health services, leadership training, and educational opportunities. Over 30 Olympic-type sports are offered, with tens of thousands of events held annually. Additionally, the organisation promotes social inclusion, awareness, and acceptance through various campaigns and initiatives.
 - 5. Health screening is offered in eight disciplines. Mention any four. (CBSE 2018)
- **Ans.** It was in 1997 that Special Olympics Healthy Athletes took an initiative to offer free health screenings and education to athletes in a warm and fun environment. Health screening is offered in eight disciplines. Four of them are given below:

- i. MedFest (history and physical exam)
- ii. Special Olympics Lions Clubs International Opening Eyes (vision/eye health)
- iii. Healthy Hearing (audiology)
- iv. Special Smiles (dentistry)
- 6. Who participate in the Paralympic games?
- Ans. The Paralympic Games are open to athletes with physical, sensory, and intellectual disabilities. Athletes are classified based on their impairment to ensure fair competition. The games feature a variety of sports, including athletics, swimming, wheelchair basketball, wheelchair rugby and many more.
 - 7. How many sports are included in Paralympic games?
- Ans. There are currently 28 Paralympic sports (22 summer and 6 winter) approved by the IPC.
 - 8. There are about 10 disability categories, including physical, visual and intellectual impairment, which have been recognised by the IPC. Mention any four.
- Ans. The International Paralympic Committee recognises 10 disability categories, including physical impairment, visual impairment and intellectual impairment. Four of these categories are:
 - i. Impaired muscle power: In this category of impairment, the force generated by muscles, such as the muscles of one limb, one side of the body or the lower half of the body is reduced, (For example, spinal cord injury, spina bifida, post-polio syndrome).
 - **ii. Impaired passive range of movement:** The range of movement in one or more joints is reduced in a systematic way. Acute conditions such as arthritis are not included.
 - iii. Loss of limb or limb deficiency: A total or partial absence of bones or joints from partial or total loss due to illness, trauma, or congenital limb deficiency (For example, dysmelia).
 - **iv. Leg-length difference:** Significant bone shortening occurs in one leg due to congenital deficiency or trauma.
 - 9. What do the colours in Deaflympic logo signify?
- **Ans.** The logo was designed in 2003 and symbolises a positive and powerful deaf sports community. It represents sign language, deaf and international cultures, unity and continuity.

- **10.** Mention any two criteria of participating in Deaflympics.
- Ans. To participate in the Deaflympics, athletes must meet two criteria:
 - i. They must have a hearing loss of at least 55 decibels in their better ear.
 - ii. They must compete without the use of hearing aids or cochlear implants.
 - **11.** Mention any two advantages of physical activities for CWSN.
- Ans. Physical activities can provide numerous benefits for children with special needs, including:
 - i. Improved physical health, such as increased strength, flexibility, and endurance.
 - ii. Enhanced social skills, self-esteem and confidence, as well as opportunities for inclusion and social interaction with peers.
- **12.** What special provisions would you recommend in your school so that CWSN get a chance to join the mainstream?
- Ans. To ensure that children with special needs have access to a quality education and can join the mainstream, some provisions that can be made in schools include:
 - i. Providing assistive technology and accommodations, such as sign language interpreters or assistive devices.
 - **ii.** Offering individualised education plans and specialised instruction to meet the unique needs of each child.
 - iii. Creating a safe and inclusive environment that promotes respect and acceptance of all students, regardless of ability.

D. Short Answer Type-II Questions

- 1. What was the thought behind starting Special Olympics?
- Ans. Eunice Kennedy Shriver founded the Special Olympics in 1968 with the belief that individuals with intellectual disabilities could benefit from participating in sports and physical activities. She recognised the lack of opportunities and discrimination that these individuals faced and wanted to provide them with a chance to showcase their abilities and break down societal barriers. Through sports, she believed that individuals with intellectual disabilities could develop physical fitness, self-esteem, and leadership skills, as well as improve

social integration and community acceptance. Today, the Special Olympics continues to promote inclusion, acceptance, and respect for individuals with intellectual disabilities around the world.

- 2. What does the logo of Special Olympics signify?
- Ans. The Special Olympics logo depicts five figures in a unifying circle, symbolising our global presence.

The figures have arms in a lowered position, recalling the time when many people were unaware of the talents and abilities of adults and children with intellectual disabilities — a time before the founding of Special Olympics.

The straight arms describe greater equality and outreach. The raised arms represent 'joy', and continued realization of ultimate goals.

- **3.** Write briefly about one of the programmes under Special Olympics.
- Ans. Young Athletes Programme comes under Special Olympics:

Young Athletes Programme: Special Olympics Young Athletes is an early childhood play programme for children with and without intellectual disabilities, ages 2 to 7 years old. Young athletes are encouraged to play basic sport skills, like running, kicking and throwing. Children learn how to play together and develop important skills as they learn to share, take turns and follow directions. They also develop motor skills. These skills help children further in their day-to-day lives. Children are thus taught healthy habits while they are young which lead to physical activity, friendships and learning. Young Athletes, apart from children, targets their families and people in the community so that they can be a part of an inclusive team too.

- 4. Make a table on the programmes under Special Olympics across the world and their significance.
- Ans. Here is a table outlining some of the programs under Special Olympics and their significance:

Program	Significance	
Sports Training and Competition	Provides individuals with intellectual disabilities opportunities to develop physical fitness, skills, and social interaction through year-round sports training and competition at local, regional, and international levels.	

Athlete Leadership Programs	Empowers athletes to develop leadership skills and take on meaningful roles in their communities through activities such as public speaking, mentoring, and advocacy.
Unified Sports	Brings together individuals with and without intellectual disabilities to compete on the same teams, promoting inclusion and breaking down stereotypes.
Healthy Athletes	Provides free health screenings and education to athletes, promoting overall health and wellness and addressing the health disparities faced by individuals with intellectual disabilities.
Young Athletes	Introduces children aged 2–7 with intellectual disabilities to the world of sports through fun activities that promote physical, cognitive and social development.

- 5. Write briefly about IPC.
- Ans. The International Paralympic Committee (IPC) was founded on 22 September 1989. It is an international non-profit organisation in Dusseldorf, Germany, to act as the global governing body of the Paralympic Movement.

IPC organises not only the Summer and the Winter Paralympic Games but it also coordinates and administers world championships and other competitions. The vision statement of IPC is 'To enable Para athletes to achieve sporting excellence and inspire and excite the world.' The Paralympic anthem is 'Hymne de' LAvenir" or "Anthem of the Future." It was composed by Thierry Darnis and adopted as the official anthem of the IPC in March 1966.

The Paralympic Games are an international multi-sporting event involving athletes with a variety of physical and intellectual disabilities, including mobility disabilities, amputation, blindness, short stature and cerebral palsy. The IPC oversees the organisation of these Games, which are held immediately after the Summer and Winter Olympics as Summer Paralympic Games and Winter Paralympic Games, respectively.

There are currently 28 Paralympic sports (22 summer and 6 winter) approved by the IPC.

6. What was the vision behind the Paralympic movement?

- Ans. The Paralympic movement was started by Sir Ludwig Guttmann, who believed in the power of sports to change lives for the better. He valued the ability to participate and competing spirit in sports for those with disabilities. He envisioned how they could overcome their physical limitations to the greatest extent possible, and how they could also build their self-esteem by performing well. Guttman, a Jewish German who had fled Nazi Germany and was working at the Stoke Mandeville Hospital, organised the first games for the disabled in 1948. The participants were British World War II veteran patients with spinal cord injuries. The games were given the name '1948 International Wheelchair Games'.
 - 7. Write briefly about the ceremony of Paralympics.
- Ans. The Paralympic Games Opening Ceremony is a spectacular event that marks the start of the competition. Athletes from different countries parade into the stadium carrying their national flags, and the Paralympic Flag is raised. The lighting of the Paralympic Flame symbolizes the start of the games. The Closing Ceremony celebrates the achievements of the athletes and includes the handover of the Paralympic Flag to the next host city.
 - 8. List down the 10 disability categories, including physical, visual, and intellectual impairment recognised by the IPC.
- Ans. The International Paralympic Committee (IPC) recognises 10 disability categories, including physical, visual, and intellectual impairments. These categories are used to ensure fair competition among athletes with similar disabilities. The 10 categories are:
 - i. Impaired muscle power: This includes athletes with limb loss or muscle weakness that affects their ability to move and control their body.
 - **ii.** Impaired passive range of movement: This category includes athletes with joint restrictions or joint fusion that limits their range of motion.
 - iii. Loss of limb or limb deficiency: Athletes with limb deficiency or congenital limb deficiency are included in this category.
 - iv. Leg length difference: This includes athletes with a significant difference in leg length, which can affect their balance and mobility.
 - v. Short stature: Athletes with a significant reduction in height due to a genetic condition or skeletal dysplasia are included in this category.

- vi. Intellectual disability: This category includes athletes with intellectual disability, autism, or a developmental disability that affects their ability to learn and process information.
- **vii.** Visual impairment: Athletes with varying degrees of vision loss or blindness are included in this category.
- viii. Hypertonia: Hypertonia is marked by an abnormal increase in muscle tension and reduced ability of a muscle to stretch.
- ix. Ataxia: Ataxia is an impairment that consists of a lack of coordination of muscle movements (For example, cerebral palsy, Friedreich's ataxia, multiple sclerosis).
- **x.** Athetosis: Athetosis is generally characterised by unbalanced, involuntary movements and a difficulty maintaining a symmetrical posture (e.g., cerebral palsy, choreoathetosis).

These categories allow for fair and equal competition in the Paralympic Games and ensure that athletes are grouped according to their functional abilities, rather than their disability label.

- 9. How are the Paralympic games held?
- Ans. The Paralympic Games are held every four years, following the Olympic Games. The Paralympics feature athletes with physical, visual and intellectual disabilities, and the events are organised by the International Paralympic Committee (IPC). The games consist of various sports events, including athletics, swimming, wheelchair basketball and cycling, among others. The opening ceremony of the Paralympic Games is similar to that of the Modern Olympics, following the rituals of the Antwerp Summer Olympics of 1920. First, the flag of the host nation is hoisted and the national anthem is played. This is followed by a march past of the participating nations in alphabetical order (according to the host's chosen language), with the host nation's participants entering last. After the speeches and entertainment programmes, the torch is lit.
- **10.** What does the logo of Deaflympics signify?
- Ans. The logo was designed in 2003 and symbolises a positive and powerful deaf sports community. It represents sign language, deaf and international cultures, unity and continuity. The hand shapes that are formed represent 'ok', 'good' and 'great', which overlap in a circle and together form the sign of united. The centre of the logo represents the iris of the eye, which

underlines deaf people as visual people as they use their eyes to communicate. The four colours of the national flags of the world are present in the logo. These four colours, namely, red, blue, yellow and green represent the four regional confederations – the Asia Pacific Deaf Sports Confederation, the European Deaf Sports Organisation, the Pan American Deaf Sports Organisation and the Confederation of African Deaf Sports.

- **11.** Write any four advantages of physical activities for CWSN.
- Ans. Four advantages of physical activities for CWSN are as follows:
 - i. Physical activities, as we know by now, are also good for mental functions and emotional stability. They uplift the mood, reduce anxiety and provide relief from depression to an extent. The physically active child with disability has an improved self-esteem. She/he gains self-confidence and becomes better at social interactions.
 - **ii.** Physical activities sharpen the mind, allowing the child with disability to have enhanced cognitive skills.
 - iii. Physical activities are performed in an interactive environment. By taking part in such group activities, the social life of the child improves and she/he learns to establish relationships with her/his peers.
 - iv. Exercising helps children with special needs to avoid debilitating health conditions like obesity, high blood pressure and diabetes. Their immune system is also boosted through regular exertion.
 - **12.** Mention two strategies to make physical activities accessible for CWSN.
- Ans. Two strategies to make physical activities accessible for CWSN are as follows:
 - i. District, state and national level competitions must be organised for the children with special needs, so that they can prove their potential on a regular basis.
 - **ii.** Individuals and organisations should be recognised by the society and government who are working to make accessible the physical activities and sports to the children with special needs.
 - Create a mind map including any six advantages of physical activities for children with special needs. (CBSE SP 2022)

Ans. Six advantages of physical activities for children with special needs

E. Long Answer Type Questions

- 1. Write a short note on programmes under Special Olympics across the world.
- **Ans.** Special Olympics is a global organisation that aims to promote social inclusion, health, and fitness for people with intellectual disabilities through sports. The organization offers a wide range of programs and initiatives across the world to cater to the diverse needs of people with intellectual disabilities.

Some of the key programs under Special Olympics include:

- i. Unified Sports: This program promotes social inclusion by bringing people with and without intellectual disabilities together to compete on the same team.
- **ii.** Young Athletes: This program is designed to introduce children with intellectual disabilities to sports at an early age, helping them develop basic motor and social skills.
- iii. Healthy Athletes: This program provides free health screenings and education to Special Olympics athletes to ensure their physical health and fitness.
- iv. Athlete Leadership Programs: These programs are aimed at developing leadership skills and empowering athletes to take on leadership roles within their communities.

These programs not only promote physical health and fitness but also empower people with intellectual disabilities to lead fulfilling lives, build strong relationships, and contribute to their communities. They provide opportunities for socialisation, personal growth, and skill development, and are a crucial part of ensuring equal opportunities and inclusion for people with intellectual disabilities.

- **2.** What are the sports rules followed in Special Olympics?
- Ans. Following sports rules followed in Special Olympics:

Special Olympic Sports Rules : An athlete must be 8 years old to participate in Special Olympics. Also, she/he should have one of the following condition, as identified by a health professional: intellectual disability, cognitive delays as assessed by formal assessment, cognitive delay leading to significant learning or vocational problems, which requires or has required specially designed instructions.

Athletes shall be assigned to competitive sports based on their age, sex and abilities. Such a division ensures that an athlete competes against another athlete with similar ability. In the competitions, first, second and third-place winners are awarded medals and rest till eighth place are awarded ribbons.

- **3.** Write briefly about the mission and logo of Special Olympics.
- **Ans.** The mission of the Special Olympics is to provide sports training and organise athletic competitions in various Olympic-type sports for children and adults with intellectual disabilities throughout the year. Its aim is to provide them continuing opportunities to develop physical fitness and courage, make them experience joy and help them in sharing of skills and bonds with their families, other Special Olympics athletes and the community.

The Special Olympics logo depicts five figures in a unifying circle, symbolising our global presence.

The figures have arms in a lowered position, recalling the time when many people were unaware of the talents and abilities of adults and children with intellectual disabilities — a time before the founding of Special Olympics.

The straight arms describe greater equality and outreach. The raised arms represent 'joy', and continued realization of ultimate goals.

4. Write a note on the history of Paralympic Games.

Ans. The history of the Paralympic Games can be traced back to the Second World War when Dr. Ludwig Guttmann, a neurologist, established the Stoke Mandeville Games in 1948 for injured soldiers in Great Britain. The Games were held to promote physical activity and rehabilitation for people with disabilities. The Stoke Mandeville Games later evolved into the Paralympic Games we know today.

The first Paralympic Games were held in Rome in 1960, featuring 400 athletes from 23 countries. The games were initially only open to athletes with spinal cord injuries, but the inclusion criteria were later expanded to include athletes with other types of disabilities. Since then, the Paralympic Games have been held every four years, following the Summer and Winter Olympic Games.

The Paralympic Games have since grown in size and stature, with the most recent Games in Tokyo 2021 featuring over 4,400 athletes from 160 countries. The Paralympic Games have played a vital role in promoting disability sports and raising awareness about the capabilities and achievements of people with disabilities. The Games have also helped break down barriers and promote greater inclusion and acceptance of people with disabilities in society.

- **5.** How does classification work under Paralympics?
- Ans. Paralympic sports could have become onesided and predictable as the least impaired athlete in the competition category would have always won. To avoid this, the competitions are designed based on the disability. There are different categories based on the severity of impairment and athletes are categorised based on these. Para athlete cannot compete in regular sports as they have disability in body structure and function. So, Paralympics are conducted and criteria are established which ensure that winning is determined by skill, fitness, endurance, power, tactical ability and mental focus.

Medical classification (until the 1980s)

From its inception until the 1980s, the Paralympic classification of athletes was based on a medical evaluation and diagnosis of impairment. An athlete's impairment was the only criterion to determine what category they competed in. It was not until views on disabled athletics shifted from just a form of rehabilitation to an end in itself, that the classification system focussed on the functional abilities of the athlete.

Functional classification (since the 1980s)

A functional classification system became the norm for disabled athletic classification in the 1980s. In a functional system, the focus is on the impact of athlete's impairment on her/ his athletic performance. Under this system, athletes with a particular disability will compete together in most sports, because their functional loss is the same and the reason for the loss is immaterial.

- 6. Write about the history and logo of Deaflympics.
- Ans. History: The Deaflympics are an international sports event for deaf athletes, held every four years, with both summer and winter games held alternately after a gap of two years. First held in Paris in 1924, it is the second oldest multination sports tournament. Over the years, it has gone by several other names, such as 'International Games for the Deaf ' from 1924 to 1965, the 'World Games for the Deaf' from 1966 to 1999. The games were also sometimes referred to as 'World Silent Games'. The name 'Deaflympics' was adopted in 2001. Since its inception, it has been organised by Comité International des Sports des Sourds (CISS, 'The International Committee of Sports for the Deaf '). The CISS was recently renamed 'Le Comité International des Sports des Sourds' (The International Committee of Sports for the Deaf, or ICSD). The CISS was inducted into IOC in 1955.

Logo: The logo was designed in 2003 and symbolises a positive and powerful deaf sports community. It represents sign language, deaf and international cultures, unity and continuity. The hand shapes that are formed represent 'ok', 'good' and 'great', which overlap in a circle and together form the sign of united. The centre of the logo represents the iris of the eye, which underlines deaf people as visual people as they use their eves to communicate. The four colours of the national flags of the world are present in the logo. These four colours, namely, red, blue, yellow and green represent the four regional confederations - the Asia Pacific Deaf Sports Confederation, the European Deaf Sports Organisation, the Pan American Deaf Sports Organisation and the Confederation of African Deaf Sports.

- **7.** What are the criteria of participating in Deaflympics?
- Ans. The criteria of participating in Deaflympics are as follows:
 - i. Participating athletes must have a hearing loss of at least 55 decibels in their 'better ear'.

- ii. Hearing aids and cochlear implants are not allowed during the competition.
- iii. The athletes cannot be guided by sounds, such as bullhorns, whistles and bells. Visual tactics such as waving flags, flashing lights, etc. are used for commencing and refereeing the games.
- iv. Like all other sporting events, it also enforces a drug-free sports environment for all deaf athletes in collaboration with the World Anti-Doping Agency (WADA).
- v. It aims to provide deaf athletes a platform free of discrimination where they can compete under conditions of fairness and equality.
- vi. Events included in Summer Deaflympics are athletics, badminton, beach volleyball, volleyball, basketball, bowling, road cycling, football, golf, handball, judo, karate,

mountain biking, orienteering, shooting, swimming, table tennis, taekwondo, tennis, freestyle wrestling and Greco-Roman wrestling. Winter events include alpine skiing, cross-country skiing, curling, ice hockey and snowboarding.

In conclusion, while Special Olympics, Paralympics and Deaflympics share a common goal of promoting sports and fitness for people with disabilities, they differ in terms of eligibility criteria, events, governing, and impact. These sporting events have helped to break down barriers and promote greater inclusion and acceptance of people with disabilities in society.

- **8.** Make a table and differentiate between Special Olympics, Paralympics and Deaflympics.
- Ans. Comparison between Special Olympics, Paralympics and Deaflympics

Category	Special Olympics	Paralympics	Deaflympics
Purpose	Promotes sports and fitness for people with intellectual disabilities	Elite sporting competition for athletes with physical, sensory, or intellectual disabilities	Elite sporting competition for deaf and hard-of-hearing athletes
Eligibility	Individuals with intellectual disabilities or closely related developmental disabilities	Individuals with physical, sensory, or intellectual disabilities	Individuals who are deaf or hard-of- hearing
Governing Body	Special Olympics International	International Paralympic Committee (IPC)	International Committee of Sports for the Deaf (ICSD)
Frequency	National and international competitions throughout the year	Held every four years, following the Summer and Winter Olympic Games	Held every two years
Participants	Over 5 million athletes across 190 countries	Over 4,400 athletes from 160 countries	Over 3,500 athletes from over 100 countries
Motto	"Let me win. But if I cannot win, let me be brave in the attempt"	"Spirit in Motion"	"Per Ludos Aequalitas" (Equality Through Sport)
Logo	Features a torch with three flames representing courage, joy, and sharing, and the Latin phrase "Special Olympics"	Features three agitos (Latin for "I move"), coloured red, blue, and green, representing the Paralympic values of determination, equality, and inspiration	The centre of the logo represents the iris of the eye, which underlines deaf people as visual people as they use their eyes to communicate. The four colours of the national flags of the world are present in the logo. These four colours, namely, red, blue, yellow and green represent the four regional confederations
Impact	Promotes social inclusion and acceptance of people with intellectual disabilities	Promotes disability sports and raises awareness about the capabilities and achievements of people with disabilities	Promotes sports and cultural exchange among deaf and hard- of-hearing athletes, and raises awareness about deaf culture

Physical Education Companion – 12 3

- **9.** How does participating in sports and games help CWSN?
- Ans. Participating in sports and games helps CWSN in many ways. They are as follows:
 - i. Physical activities are a good strategy for imparting motor skills and physical fitness that children with physical or intellectual disabilities might not have due to their condition. They will be able to develop handeye coordination, flexibility of the body, muscle strength and endurance, increased bone density.
 - ii. Physical activities, as we know by now, are also good for mental functions and emotional stability. They uplift the mood, reduce anxiety and provide relief from depression to an extent. The physically active child with disability has an improved self-esteem. She/he gains self-confidence and becomes better at social interactions.
 - iii. Physical activities sharpen the mind, allowing the child with disability to have enhanced cognitive skills.
 - iv. Physical activities are performed in an interactive environment. By taking part in such group activities, the social life of the child improves and she/he learns to establish relationships with her/his peers.
 - Exercising helps children with special needs to avoid debilitating health conditions like obesity, high blood pressure and diabetes. Their immune system is also boosted through regular exertion.
 - **10.** Discuss the strategies to make physical activities accessible for CWSN.
- Ans. The strategies to make physical activities accessible for CWSN are as follows:
 - i. All the schools must have a separate wing to admit children with special needs. Experts or trained personnel should be made available in the school on regular basis.
 - ii. In all clubs and community centres of different societies, provision should be made for physical activities and sports for persons with special needs with proper supervision.
 - iii. Society level activities should be organised for such children to uplift their lifestyle.
 - iv. District, state and national level competitions must be organised for the children with special needs, so that they can prove their potential on a regular basis.

- Individuals and organisations should be recognised by the society and government who are working to make accessible the physical activities and sports to the children with special needs.
- vi. Equipment should be made available at subsidised rates so that activity centres can be built-up at the society level.
- vii. In all the recreational and entertainment centres, provision for participation of the CWSN should be made so that these children also feel that they are the part of the society.
- viii. In total, the attitude of the people needs to be changed towards the CWSN and the concept of inclusion should develop among everyone to make activities accessible for the children with special needs.

F. Value-Based Question

Rohit joined Class 9 of a reputed school. He is little different from his other classmates as he is a CWSN. Other students notice this. He cannot play games and sports like his other classmates. So, they ignore him and play amongst themselves. The PT teacher notices this. He gathers all the students of the class including Rohit and devises a game that even Rohit can play. All the students enjoy this sports session. This becomes a norm everyday during sports period. Slowly, Rohit becomes one among the students.

Answer the following questions based on the above paragraph.

- 1. What was the attitude of students towards Rohit?
- 2. How would you reflect upon PT teacher's action?
- **3.** What happens when CWSN are included in sports and games?
- 4. What happens when CWSN are excluded from sports and games?
- Ans. 1. The attitude of the students towards Rohit was discriminatory and ignoring him because of his disability.
 - 2. The PT teacher's action was positive and inclusive. By devising a game that Rohit could participate in, he ensured that everyone in the class could play together, fostering inclusion and acceptance.
 - When CWSN are included in sports and games, it promotes their physical and mental well-being, enhances their social skills and

helps them to integrate better into society. It also promotes a sense of equality, reduces isolation and discrimination, and helps to develop empathy and understanding among non-disabled individuals.

4. When CWSN are excluded from sports and games, they miss out on important

opportunities for physical exercise, socialization and skill development. They may feel isolated and excluded, leading to low self-esteem and confidence. This exclusion can also promote discrimination and negative attitudes towards people with disabilities among non-disabled individuals.

CHAPTER 5

SPORTS AND NUTRITION

P. 102-107

A. Objective Type/Multiple-Choice Questions

I. Multiple-Choice Questions:

- 1. Which of the following points must be taken into consideration while planning a balanced diet?
 - (a) Age, gender and body weight
 - (b) Activity level and eating habits
 - (c) Income level and social customs
 - (d) All of these
- Ans. (d) All of these
 - 2. Which of the following are not macronutrients?
 - (a) Carbohydrates (b) Minerals
 - (c) Water (d) Proteins
- Ans. (b) Minerals
 - 3. Carbohydrates which are soluble in water and crystalline in structure. (CBSE SP 2020)
 - (a) Simple (b) Complex
 - (c) Compound (d) Complicated
- Ans. (a) Simple
 - 4. Which amongst these is not a micromineral?

(CBSE SP 2020)

- (a) lodine (b) Magnesium
- (c) Iron (d) Copper
- Ans. (b) Magnesium
 - 5. Which one of the following is a food that is high in 'fats'? (CBSE 2020)
 - (a) Orange (b) Bread
 - (c) Red meat (d) Tomatoes
- Ans. (c) Red meat
 - 6. The vitamins soluble in water are (CBSE 2020)
 - (a) Vitamin C and B. (b) Vitamin D and A.
 - (c) Vitamin K and E. (d) All of these.
- Ans. (a) Vitamin C and B.
 - 7. What is another name of riboflavin?
 - (a) Vitamin B (b) Vitamin B₅
 - (d) Vitamin C (c) Vitamin B_2
- **Ans.** (c) Vitamin B₂
 - 8. The food component present in sugar is (CBSE 2020)

- (a) fats. (b) protein. (c) vitamin. (d) carbohydrate. Ans. (d) carbohydrate. 9. Who discovered vitamin A? (CBSE 2020) (a) Dr J B Nash (b) Dr McCollum (c) Dr Coubertin (d) Dr Harvard Ans. (b) Dr McCollum
 - 10. Which of the following vitamin is insoluble in fats?
 - (a) A (b) E
 - (c) K (d) C
- Ans. (d) C
 - 11. The main source of Vitamin C is _
- (CBSE 2020)
- (a) guava. (b) egg.
- (c) milk. (d) banana.
- Ans. (a) guava.

12. What according to you is the main cause for night-blindness? (CBSE SP 2021 Term 1)

- (a) Deficiency of Vitamin E
- (b) Deficiency of Vitamin C
- (c) Deficiency of Vitamin A
- (d) Deficiency of Vitamin D
- Ans. (c) Deficiency of Vitamin A
 - 13. What is the ratio of carbon, hydrogen and oxygen in carbohydrates?

(CBSE SP 2021 Term 1)

- (a) 1:2:1 (b) 2:2:1 (c) 2:1:1 (d) 1:2:2
- Ans. (a) 1:2:1
 - 14. Which statement is not true about protein? (CBSE SP 2021 Term 1)
 - (a) Protein forms new tissues
 - (b) Protein regulates the balance of water and acids
 - (c) Protein helps in production of hormones.
 - (d) Protein makes antibodies.
- Ans. (b) Protein regulates the balance of water and acids
 - 15. Deficiency of which of the following leads to rickets?
 - (a) Iron (b) lodine
 - (d) Chromium (c) Calcium
- Ans. (c) Calcium

56

16. What is the calorific value of water?

- (a) 10 joules/calorie (b) 0 joule/calorie
- (c) 25 joules/calorie (d) 100 joules/calorie
- Ans. (b) 0 joule/calorie

II. Match the following:

(i)

(iv)

- 1. List I Macronutrient
 - Carbohydrates (1) Cucumber

List II - Source

- (ii) Proteins (2) Cotton seed
- (iii) Fats (3) Soyabean
 - Water (4) Colocasia

Select the correct set of options:

- (a) (i)-(3), (ii)-(4), (iii)-(2), (iv)-(1)
- (b) (i)-(2), (ii)-(4), (iii)-(1), (iv)-(3)
- (c) (i)-(1), (ii)-(2), (iii)-(3), (iv)-(4)
- (d) (i)-(4), (ii)-(3), (iii)-(2), (iv)-(1)

Ans. (d) (i)–(4), (ii)–(3), (iii)–(2), (iv)–(1)

2. List I – Vitamins List II – Scientific Name

- (i) Vitamin B₁₂ (1) Thiamin
- (ii) Vitamin B₃ (2) Biotin
- (iii) Vitamin B₇ (3) Cobalamin
- (iv) Vitamin B₁ (4) Niacin

Select the correct set of options:

- (a) (i)-(4), (ii)-(3), (iii)-(1), (iv)-(2)
- (b) (i)-(2), (ii)-(3), (iii)-(4), (iv)-(1)
- (c) (i)-(1), (ii)-(2), (iii)-(3), (iv)-(4)
- (d) (i)-(3), (ii)-(4), (iii)-(2), (iv)-(1)
- Ans. (d) (i)–(3), (ii)–(4), (iii)–(2), (iv)–(1) III. Assertion-Reason Type Questions:
- CBQ

Given below are the two statements labelled Assertion (A) and Reason (R).

A: Even what is considered nutritious, such as carbohydrates, should be consumed in appropriate amounts.

R: A balanced diet therefore has a standard structure.

In the context of the two statements given above, which one of the following is correct?

- (a) Both (A) and (R) are true and (R) is the correct explanation of (A).
- (b) Both (A) and (R) are true but (R) is not the correct explanation of (A).

- (c) (A) is true, but (R) is false.
- (d) (A) is false, but (R) is true.

Ans. (c) (A) is true, but (R) is false.

IV. Data-Based Questions:

Given below is the data which depicts the percentage of school students suffering from the deficiency of various vitamins:

CBQ

On the basis of the pie-chart given above, answer the following questions:

- 1. Which of the deficiency can be reduced by adding a morning outdoor-play-period in the timetable?
 - (a) Vitamin A (b) Vitamin D
 - (c) Vitamin K (d) Vitamin E
- 2. If a student has deficiency of Vitamin A, what is he likely to suffer from?
 - (a) Anaemia (b) Paralysis
 - (c) Scurvy (d) Night blindness
- 3. What is common about the vitamins given above in the pie-chart?
 - (a) They are all water soluble.
 - (b) They are all fat soluble.
 - (c) They are all fat insoluble.
 - (d) They all affect the immune system.
- Ans. 1. (b) Vitamin D; 2. (d) night blindness; 3. (b) They are all fat soluble.

V. Picture-Based Questions:

Identify the following intramural and write their names:

1.

CBO

Ans. 1. milk–calcium; 2. banana–potassium; 3. table salt–sodium; 4. lentils–phosphorus

VI. Case-Based Questions:

CBQ

1. In relation to the picture given, answer the following questions.

- (a) What type of foods is shown in the figure?
- (b) These nutrients are good solvent for vitamins _____, ____, and _____
- (c) How are these nutrients classified?
- (d) These are composed of the elements and
- Ans. (a) Food rich in fats
 - (b) A, D, E and K
 - (c) Saturated Fatty acids (SFA), polyunsaturated fatty acids (PUFA) and monounsaturated fatty acids (MUFA).
 - (d) Carbon, oxygen and hydrogen

- B. Very Short Answer Type Questions
 - 1. Define a balanced diet. (CBSE 2014)
- **Ans.** A balanced diet comprises different types of foods which in total provides the body with sufficient nutrition for growth and development.
 - 2. What do you mean by nutrition?
- Ans. Nutrition means getting the right amount of nutrients for bodily functions like maintenance, growth, metabolism, repair and replacement of tissues.
 - 3. Write briefly about macronutrients. (CBSE 2019)
- Ans. The nutrients which are required in large amounts in the diet are known as macronutrients.
 - 4. What are proteins? (CBSE 2012)
- Ans. Proteins are the substances that have carbon compounds, hydrogen, nitrogen, oxygen and sometimes sulphur, phosphorus and iron.
 - 5. Make a list of macronutrients and micronutrients.
- Ans. The list of macronutrients:
 - Calcium
- Magnesium
- Potassium
 Phosphorus
- Sodium

• Iron

The list of micronutrients:

Copper

• Zinc

- Iodine
- Chromium
- 6. What are the nutritive components of diet?

(CBSE SP 2017)

- Ans. The nutritive components of diet are:
 - Macronutrients like proteins, carbohydrates and fats.
 - Micronutrients like vitamins and minerals.
 - 7. Name any two non-nutritive components of diet. (CBSE SP 2013)
- Ans. The two non-nutritive components of diet are:
 - (i) Fibre or Roughage
 - (ii) Water
 - 8. What are vitamins?
- Ans. Vitamins are the compounds that contribute to our energy level and boost our immune system.
 - 9. What are the different types of vitamins?
- Ans. The different types of Vitamins are:
 - Fat soluble vitamins like Vitamin A, Vitamin D, Vitamin E and Vitamin K.

- Water soluble vitamins like Vitamin B complex and Vitamin C.
- **10.** What are carbohydrates? (CBSE 2011)
- Ans. Carbohydrates are organic compounds which are the primary sources of energy. They are also called as 'energy giving foods'.
 - **11.** What are fats?(CBSE 2011)
- Ans. Fats are a backup energy source and are called lipids also. These are composed of the elements carbon, oxygen and hydrogen in the ratio

76:12:12.

- Why does the weightlifter's diet include lots of proteins? (CBSE 2018)
- Ans. Weightlifter's diet includes lots of protein. It is because:
 - Proteins help in forming new tissues and repairing the broken tissues.
 - To maintain strong ligaments and tendons needed for muscle growth.
 - 13. Enlist two sources of calcium. (CBSE 2019)
- Ans. Calcium is found in milk and milk products and dark green leafy vegetables.
 - 14. What are fats and carbohydrates composed of?
- Ans. Fats: These are composed of the elements carbon, oxygen and hydrogen in the ratio of 76 : 12 : 12.

Carbohydrates: These consist of carbon (Carbo-), hydrogen (hydr-) and oxygen (-ate) atoms with a hydrogen atom ratio 2:1 just like in water H₂O.

- 15. What is roughage or fibre in diet?
- Ans. Roughage or fibre is the indigestible component of food found in fruits, vegetables and grains. Dietary fibre bulks up our body making it appear fuller.

C. Short Answer Type-I Questions

- 1. What are essential nutrients?
- **Ans.** Essential nutrients are compounds required by the body for normal physiological function that cannot be synthesised in sufficient quantities by the body and must be obtained through diet. These include vitamins, minerals, amino acids and fatty acids.
 - **2.** What should be the proportion of proteins, fats and carbohydrates in the food?
- Ans. The proportion of proteins, fats, and carbohydrates in the diet can vary depending on individual needs and goals. However, a

generally recommended ratio is 10-35% of daily calories from protein, 20-35% from fat and 45-65% from carbohydrates. The proportion of proteins, fats and carbohydrates should be in the ratio 1 : 1 : 4.

- 3. What are the different types of macronutrients?
- Ans. The four types of macronutrients are carbohydrates, proteins, fats and water. Carbohydrates are the primary energy source for the body, while proteins are important for building and repairing tissues. Fats also provide energy and play a role in hormone production and nutrient absorption. Water may not always be considered as macronutrient, but it is needed by our body in large amount.
 - 4. What are the different types of carbohydrates?
- Ans. Carbohydrates come in two main forms, i.e. simple carbohydrates and complex carbohydrates. Simple carbohydrates (monosaccharides and disaccharides) are formed by smaller chains; they are crystalline, water soluble and give food a sweet taste. Examples include glucose, fructose, galactose, sucrose, maltose and lactose. Complex carbohydrates, also known as polysaccharides, are formed by longer chains, such as starch, dextrin, glycogen and cellulose.
 - 5. What do proteins contain?
- Ans. Proteins are substances that have carbon compounds, hydrogen, nitrogen, oxygen and sometimes sulphur, phosphorus and iron. Our body converts them into amino acids as the large size of protein molecules makes it difficult for them to be used without being broken down. There are 20 amino acids out of which nine amino acids or Essential Amino Acids (EAA) must be obtained from the food we eat.
 - 6. How are fats classified?
- Ans. Fats or fatty acids are classified into saturated fatty acids (SFA), polyunsaturated fatty acids (PUFA) and monounsaturated fatty acids (MUFA). The fats present in processed foods, packaged foods, sea foods and dairy products are saturated fats.
 - 7. What are the different types of micronutrients?
- Ans. The two types of micronutrients are vitamins and minerals. Vitamins are organic compounds required in small amounts for normal physiological function, while minerals are inorganic compounds that also play important roles in the body. Both are essential for various processes such as immune function, bone health, and energy production.

- 8. Discuss why protein is among the most important macronutrients. (CBSE 2020)
- Ans. Protein is among the most important macronutrients because it plays a critical role in building and repairing tissues, including muscles, bones, skin and hair. It is also involved in important bodily processes such as enzyme and hormone production, immune function and nutrient transport. Protein is also important for satiety and weight management.
 - 9. What should be the basic nutrient in a weight lifter's diet and why? (CBSE SP 2022)
- **Ans.** Protein should be the basic nutrient in a weight lifter's diet as it is essential for muscle building and repair. The body requires more protein during periods of intense physical activity, such as weightlifting, to maintain and build muscle mass. Adequate protein intake can also improve exercise performance and recovery.
 - 10. Why is iodine important?
- Ans. lodine is important for thyroid hormone production, which regulates metabolism, growth and development. Inadequate iodine intake can lead to goiter, hypothyroidism, and impaired cognitive function, particularly in children. lodine is found in seafood, iodised salt, and some vegetables, and is also available in supplement form.
- 11. Vitamins are essential for our energy levels and boost immune system. Comment. (CBSE 2020)
- **Ans.** Vitamins play a crucial role in energy production by assisting in the conversion of food into usable energy. They also support immune function by helping to produce and activate immune cells and by acting as antioxidants to protect cells from damage. Adequate vitamin intake is essential for overall health and well-being.
 - **12.** What is the importance of Vitamin K?
- **Ans.** Vitamin K is important for blood clotting, as it is required for the activation of proteins involved in the coagulation process. It also plays a role in bone metabolism and may help to prevent osteoporosis. Vitamin K is found in leafy green vegetables, oils, and some animal products.
 - **13.** Why is fibre or roughage important in our diet?
- Ans. Fibre, or roughage, is important in the diet for several reasons. It helps to regulate bowel movements, prevent constipation and promote digestive health. Fibre also helps to reduce cholesterol levels, control blood sugar, and promote satiety, making it an important component of a healthy diet.

- 14. Nitika wants to be a model, so she went on a crash diet. Is it a right decision on her part? Why?
- **Ans.** No, going on a crash diet is not a right decision as it can lead to a variety of health problems such as nutrient deficiencies, muscle loss and a weakened immune system. It can also lead to weight gain after the diet ends, and may not result in the desired appearance.

D. Short Answer Type-II Questions

 Create a mind map depicting a balanced diet containing all types of required nutrients from all the food groups.

Ans. Mind map

- 2. Define balanced diet. Explain any four micronutrients. (CBSE 2020)
- Ans. A diet which consists of different food types and sufficient amounts of nutrients for the development of human body is called a balanced diet. The micronutrients are: lodine, Iron, Chromium and Copper. (See pages 94-95 of textbook)
 - 3. How is nutrition different from food?
- Ans. Foods are those substances which we eat for the sustenance of our life while nutrition concerns substances present in the food we eat which affects our body.
 - 4. What are carbohydrates? Differentiate between its types. (CBSE SP 2022)
- Ans. Carbohydrates are a macronutrient found in many foods such as fruits, vegetables, grains and dairy products. They provide energy to the body and are essential for optimal bodily function. There are three main types of carbohydrates simple sugars, complex carbohydrates and dietary fibre.
 - (i) Simple sugars are the smallest type of carbohydrate and can be quickly absorbed by the body. Examples include glucose, fructose, and sucrose.

- (ii) Complex carbohydrates are made up of long chains of simple sugars and take longer to digest. Examples include starches found in bread, pasta, and potatoes.
- (iii) Dietary fibre is a type of complex carbohydrate that is not digested by the body. It is important for digestive health and can be found in foods such as fruits, vegetables, and whole grains.
- 5. Write briefly about minerals as an important nutritive component. (CBSE 2016)
- Ans. Minerals are very important nutritive component. Approximately 4% of our body mass is made up of minerals, which are found in an ionised state. These are broadly classified as macronutrients such as calcium, potassium, phosphorus, sodium, chlorine, magnesium and sulphur and micronutrients such as copper, iron, iodine, fluoride, cobalt, chromium, selenium and zinc.
 - 6. Write a short note on vitamins and their types.
- Ans. Vitamins contribute to our energy level and boost our immune system. They are classified into fat soluble vitamins and water-soluble vitamins.

Fat-soluble vitamins: Vitamins which dissolve in fat are called fat soluble vitamins. They are stored in the liver and fatty tissue. Vitamins A, D, E and K are fat soluble. Vitamin A is composed of hydrogen, carbon and oxygen. It is needed for new cell growth. Vitamin D is made up of carbon, hydrogen and oxygen elements. It releases parathyroid hormone which can reabsorb bone tissue, making bones thin and brittle. Vitamin K is necessary for blood clotting. It plays a vital role in cell growth.

Water - soluble vitamins: Vitamin B complex and Vitamin C are water-soluble vitamins. These are ejected from the body during urination. B complex is a group of eight water- soluble vitamins.

- **7.** What are the different forms of Vitamin B Complex? Explain any one of them.
- Ans. The different forms of Vitamin B complex are:
 - Vitamin B₁: Thiamine
 - Vitamin B₂: Riboflavin
 - Vitamin B₃: Niacin
 - Vitamin B₅: Pantothenic acid
 - Vitamin B₆: Pyridoxine
 - Vitamin B7: Biotin
 - Vitamin B₉: Folic acid

- Vitamin B₁₂: Cobalamin
- B_{12} /Cobalamin
- It helps in protein metabolism.
- Formation of red blood cells and maintenance of central nervous system.
- Deficiency diseases like anaemia, weakness and tingling, numbness in arms and legs.
- Its food sources are low fat dairy, cheese, red meat, liver, fortified soy products and cereals.
- 8. Explain the role of fibre in diet.
- Ans. The role of fibre in diet is as follows:
 - It bulks up our body, making it appear fuller.
 - It plays a role in digestion and prevents constipation.
 - Two types of fibres:
 - (i) Soluble fibre, which attracts water and reduces cholesterol and brings alterations in blood sugar level,
 - (ii) Insoluble fibre, which does not dissolve in water and softens the stool, thereby bringing relief from chronic constipation.
 - It lowers the risk of heart diseases and certain forms of cancer.
 - What do you understand by micronutrients? Explain the sources and role of any two macronutrients. (CBSE 2019)
- Ans. Micronutrients are needed in small quantities though they are indispensable for our health. Commonly known micronutrients are minerals and vitamins. Their primary function is to enable chemical reactions. They are not responsible for energy production.

Sources and role of two macronutrients:

(i) Carbohydrates

Sources: Cereals, pulses, dried peas, dates, potato, rice, sugar, gur, etc.

Role: Source of energy, lack of carbohydrates causes loose skin, weight loss, weakening of the body, fatigue.

(ii) Proteins

Sources: Egg, fish, meat, dairy products, vegetables, pulses, soya beans, mustard, dry fruits, nuts, etc.

Role: As building blocks of life, involved in the production of hormones, enzymes, tissues and antibodies, deficiency causes marasmus, kwashiorkor diseases.

- **10.** Discuss any three macrominerals and their importance.
- Ans. The three macrominerals can be discussed as under:
 - (i) **Phosphorus:** The main source of phosphorus are meat and meat products, milk and milk products, lentils, nuts and whole grains. It maintains the bones and teeth, and also makes our gums healthy. The daily intake value for phosphorus is 1 g. Phosphorus deficiency causes hypophosphatemia, rickets in children and osteomalacia.
 - (ii) Magnesium: It is found in dark leafy green vegetables, nuts, leafy greens, avocados, yogurt, bananas, dried fruits and dark chocolate. Magnesium enables the proper functioning of nerves and muscles, boosts the immune system, normalise heart beat and strengthen bones.
 - (iii) **Sodium:** It is found in large amount in canned foods, fast foods, table salt, cured meat, salad dressing, pickles, instant foods etc. Sodium aids muscular activities and transmission of nerve impulse. The daily intake value for sodium is 2.3 g. Its deficiency causes hypernatremia, the symptoms of which include vomiting, nausea, muscle spasms and seizures.
- **11.** Discuss any three microminerals and their importance.
- Ans. Three microminerals and their importance:
 - (i) lodine: lodine is an important ingredient of hormones produced by the thyroid gland which are required for the growth, production of body cells, metabolism, reproduction, and maintenance of body temperature. Lack of iodine intake causes enlargement of thyroid glands. It main sources are sea food, dish and iodized salt.
 - (ii) Iron: Iron is required for the production of haemoglobin. The deficiency of iron causes anaemia. Red meats, fish, poultry, whole grains, dark leafy vegetables are rich in iron.

- (iii) **Chromium:** It regulates the blood sugar levels. It is mainly found in whole grains, nuts, cheese, orange juice, potatoes, raw tomatoes, etc. Deficiency of chromium causes anxiety and fatigue. Deficiency of chromium increases the risk of diabetes.
- **12.** Why is water important even though it is non-nutritive?
- **Ans.** Water is important though it is non-nutritive for the reason that it serves as a transporter of nutrients to cells and removes of waste through urine. It is also crucial for control of body temperature, ionic balance of the blood as well as body's metabolism.
 - **13.** How would you differentiate between flavour compounds and colour compounds?
- Ans. Colour compounds: It is a known fact that we like our food to have certain appetising colours. Some foods are naturally enriched with attractive colours, like fruits while others like animal products have dull, monochromatic shades. Sometimes pigments are added to lend characteristic hues.

Flavour compounds: Flavours are derived from both nutritive and non-nutritive compounds of food. Acidic content gives a sour taste like citric acid in lemons. Alkalinity meanwhile lends a bitter taste and soapy feeling to the mouth in foods.

- 14. How does protein act as a nutritive component of diet?
- **Ans.** Protein containing carbon compounds, hydrogen, nitrogen, oxygen and sometimes sulphur, phosphorus and iron gets converted by our body to amino acids as the large size of protein molecules. It forms protoplasm, and is found in many physiological parts. It produces the hormones, enzymes, tissues and antibodies, regulates water and acid balance in the body, and transports oxygen and nutrients. Thus, protein acts as a very important component of food.
 - **15.** Make a table on any three vitamins under Vitamin B complex giving scientific name, approx. daily value, function, deficiency diseases and food sources.

Ans. (Take any three from the table given below.)

Vitamins	Scientific Name	Approx. Daily Value	Function	Deficiency Diseases	Food Sources
B ₁	Thiamine	1.5 mg	 Helps in metabolising the body fat and protein Regulates important functions of cardiovascular, nervous, endocrine and digestive systems 	Skin diseases, headache, nausea, fatigue, depression, loss of mental alertness, difficulty in breathing, constipation and heart damage	Nuts, oranges, eggs, seeds, liver, peas, cereals, flour and oats
B2	Riboflavin	1.7 mg	 This yellow coloured vitamin has antioxidant properties. Keeps the skin healthy Participates in the production of RBCs Overcooking and exposure to sunlight tend to destroy it. 	Unhealthy skin, cataracts and weakening of the immune system	Almonds, oily fish, red meat, eggs, mushrooms, sesame seed, sea food and spinach
B ₃	Niacin	20 mg	 Vital for the digestive system, skin and for producing energy 	Pellagra	Peanuts, mushrooms, tuna, liver and chicken
B ₅	Pantothenic Acid	10 mg	 Helps in the production of hormones and cholesterol 	Fatigue, insomnia and burning feet	Chicken liver, avocados, salmon, sunflower seeds, mushrooms, broccoli and corn
B ₆	Pyridoxine	2 mg	 Helps in the synthesis of haemoglobin Keeps our immune system and nervous system healthy 	Dermatitis, depression and weakened immune system	Pistachio nuts, cooked tuna, banana, spinach, sunflower seeds and bran
B ₇	Biotin	30 mg	 Strengthens hair and nails Helps in the production of energy Produces fatty acids and amino acids 	Skin changes, hair loss, confusion and nausea	Eggs, almonds, leg- umes, whole grains, milk and meat
B ₉	Folic acid	400 mcg	 Required for numerous body functions, including DNA synthesis and repair, cell division and cell growth 	Anaemia in adults, birth defects and heart diseases	Citrus fruits and juice, avocados, lentils, nuts, and dark green vegetables
B ₁₂	Cobalamin	 2.4 mcg for ages 14 years and above; 2.6 mcg for preg- nant women; 2.8 mcg for breastfeeding women 	 Helps in protein metabolism Vital for the formation of red blood cells and maintenance of central nervous system 	Anaemia, weakness and tingling, numbness in arms and legs	Low fat dairy, cheese, red meat, liver, fortified soy products and cereals

- 16. Discuss water-soluble vitamins briefly.
- **Ans.** Vitamin B complex and Vitamin C are water soluble vitamins. These vitamins are ejected from the body during urination. Thus, daily intake of vitamins is recommended.
 - Vitamin B Complex: It is a group of eight water soluble B vitamins. These work alongside each other and each has its own specific benefits. Together they play a vital role in keeping and running our body like well-oiled machine.
 - Vitamin C: It is considered one of the healthiest and safest nutrients. It comes with a broad spectrum of benefits, ranging from growth and repair of tissues, healing of wounds, production of collagen, bone and tooth formation, increasing the absorption and utilisation of iron, to lowering hypertension, curing cataracts, reducing the risk of cardiovascular diseases and controlling asthma as well as diabetes. Its deficiency may cause diseases like: scurvy, gingivitis, anaemia, fatigue, and weakness.
 - 17. Discuss fat-soluble vitamins briefly.
- **Ans.** These are so called because they dissolve in fat. These vitamins are stored in the liver and fatty tissues. Vitamins A, D, E and K are fat soluble.
 - Vitamin A: It is available in different forms like retinol, renal, retinoic acid and a number of pro vitamin A carotenoids. Vitamin A is composed of hydrogen, carbon and oxygen. It is needed for new cell growth, good vision, healthy skin, hair and maintenance of immune system.
 - Vitamin D: It is made up of carbon, hydrogen and oxygen elements. Vitamin D along with calcium helps in building bones, and keeping them strong and healthy. It also blocks the release of parathyroid hormone which can reabsorb bone tissue, making bones thin and brittle. Its deficiency causes the diseases like rickets in children, periodontitis, dental cavities and highest risk of cancer.
 - Vitamin K: It is necessary for normal blood clotting. It plays a vital role in cell growth, metabolism of bone and other tissues, prevention of haemorrhagic disease in new born babies, heavy menstrual cycle, gum bleeding, nose bleeding, and easy bruising, defecting blood coagulation and anaemia.

E. Long Answer Type Questions

- 1. What is balanced diet? Elucidate its any four constituents. (CBSE 2013)
- Ans. A balanced diet is one that consists of different food types and sufficient amounts of nutrients for the development of human body. It has not a standard structure. It should be planned according to the individual body type. There are six constituents of balanced diet like Carbohydrates, Proteins, Minerals, Vitamins, Fats and Water. It is necessary that each is consumed regularly.

The four constituents are elucidated as under:

- (i) **Carbohydrates** are organic compounds which are the primary sources of energy. They are known as 'energy giving foods' and are made of small simple sugars that enter the body as glucose. They provide 17 kJ/g of energy. These molecules consist of carbon (carbo-), hydrogen(hydro-) and oxygen (-ate) atoms with a hydrogen oxygen atom ratio of 2 : 1 just like in water that is H_2O .
- (ii) **Proteins:** Proteins are substances that have carbon compounds, hydrogen, nitrogen, oxygen and sometimes sulphur, phosphorous and iron. Our body converts them to amino acids as the large size of protein molecules make it bit difficult for them to be used without being broken down. Proteins are known as the building blocks of life.
- (iii) Fats: These are also called lipids. These are composed of the elements carbon, hydrogen and oxygen in the ratio of 76 : 12 : 12. Fats are backup energy source.
- (iv) Water: Water is made up of hydrogen and oxygen elements in the ratio of 2 : 1. It serves as a transporter of nutrients to cell and remover of waste through urine. It is also crucial for control of body temperature, ionic balance of the blood as well as the body's metabolism.
- 2. Explain macronutrients and their role in our diet.

(CBSE 2019)

Ans. Nutrients that are required in large amounts in the diet are known as macronutrients, i.e. carbohydrates, proteins, fats and water. The functions of macronutrients are to provide energy, promote growth and development and regulate body functions. Carbohydrates, proteins, fats and water which are the macronutrients are very essential for the growth of a person. Carbohydrates come in two main forms, i.e. simple carbohydrates and complex carbohydrates. Simple carbohydrates are formed by smaller chains. Carbohydrates are one of our body's dependable sources of energy.

Proteins are substances that have carbon and nitrogen compounds. Proteins are involved in the production of hormones, enzymes, tissues and antibodies, regulation of water and acid balance in the body. Fats known as lipids are a backup energy source. These are classified into saturated fats, polyunsaturated fats and monounsaturated fats. Water serves as the transporter of nutrients to cells and remover of waste through urine. It may not always be considered as macronutrient but it is needed by our body in large amount.

- 3. Discuss micronutrients in detail.
- Ans. Micronutrients are needed in small quantities though they are indispensable for our health. Commonly known micronutrients are minerals and vitamins. Their primary function is to enable

chemical reactions. They are not responsible for energy production. Approximately 4% of our body mass is made up of minerals which are found in an ionized state. The minerals present in and needed by our body are broadly classified into two types: macro minerals such as calcium, potassium, phosphorus, sodium, chlorine, magnesium and sulphur and micro-minerals such as copper, iron, iodine, fluoride, cobalt, chromium, selenium and zinc. We need 0.1 g of macrominerals and 0.01 g of trace minerals on a daily basis.

- 4. 'Vitamins are essential for our metabolic process.' What happens if our diet is devoid of vitamins? (CBSE 2012)
- Ans. Vitamins serve primarily as regulators of metabolic functions, many of which are essential for improving performance of various activities. There is little evidence that vitamin enhances performance. Among the vitamins, only three vitamins are considered important, i.e. Vitamins C, E and B complex. Though excessive intake of these vitamins do not enhance the performance level, but the deficiency or the devoid of vitamins might affect the health of athletes negatively and reduce their potential.
- 5. Make a table discussing various types of vitamins, their functions, food sources and deficiency diseases.

Vitamin	Function	Food Sources	Deficiency Diseases
Vitamin A	Supports vision, immune function, and skin health	Sweet potatoes, carrots, spinach, liver, eggs	Night blindness, dry skin
Vitamin B ₁ (Thiamin)	Helps convert food into energy, supports nervous system function	Whole grains, legumes, nuts, pork	Beriberi, Wernicke-Korsakoff syndrome
Vitamin B ₂ (Riboflavin)	Supports energy production, antioxidant function	Dairy products, leafy greens, whole grains	Ariboflavinosis
Vitamin B ₃ (Niacin)	Supports energy production, nervous system function, and skin health	Meat, fish, legumes, whole grains	Pellagra
Vitamin B ₆	Supports brain function, immune function, and red blood cell production	Chicken, fish, bananas, potatoes, nuts	Anemia, depression, confusion
Vitamin B ₁₂	Supports red blood cell production, nerve function, and DNA synthesis	Meat, fish, dairy products, eggs	Anemia, nerve damage
Vitamin C	Antioxidant, supports immune function and wound healing	Citrus fruits, strawberries, broccoli, bell peppers	Scurvy, weakened immune system
Vitamin D	Helps with calcium absorption, bone health, and immune function	Sunlight, fatty fish, fortified dairy products	Rickets, osteomalacia
Vitamin E	Antioxidant, supports immune function and skin health	Nuts, seeds, vegetable oils, leafy greens	Anemia, muscle weakness
Vitamin K	Supports blood clotting and bone health	Leafy greens, broccoli, liver, egg yolks	Excessive bleeding, weakened bones

Ans.

- 6. How do minerals contribute to our health? Explain citing at least four examples of each type of minerals.
- Ans. Minerals play a vital role in our life. Minerals which contribute to our health are of two types:
 - (i) Macrominerals: Calcium, potassium, sodium, magnesium and phosphorus, and
 - (ii) Microminerals: lodine, iron, chromium, copper and zinc.
 - What are fats? Write a detailed note on its types. Also mention its importance in the proper functioning of the body. (CBSE 2012)
- Ans. Fats also called lipids are composed of the elements carbon, oxygen and hydrogen in the ratio 76 : 12 : 12. Fats are a backup energy source. They regulate the body's core temperature, boost hormone production, protect organs and are a good solvent for fat-soluble vitamin (A, D, E and K) and carotenoids. It is recommended that 20–35% of our daily energy requirement should come from fats.

Fats are classified into saturated fats, polyunsaturated fats and monounsaturated fats. The fats present in processed foods, packaged foods, sea foods and dairy products are saturated fats; these fats have the tendency to raise the level of cholesterol in the blood stream and heighten the risk of getting cardiovascular diseases. Polyunsaturated fats and monounsaturated fats on the other hand, help in lowering the blood cholesterol. Inclusion of these fats in the diet must naturally take into account which type should be struck from the list. These fats are very important for the health and can be obtained from animal sources and vegetarian sources also.

- 8. Write a note on the nutritive components of diet.
- Ans. Nutritive components of diet consist of:
 - Macronutrients: Proteins, carbohydrates and fats. (Refer to P–95-96 of the textbook)
 - Micronutrients: Vitamins and minerals. (Refer to P–95-96 of the textbook)
 - **9.** Write a note on the non-nutritive components of diet.
- Ans. Non-nutritive components of diet are:
 - Fibre or roughage
 - Water
 - Colour compounds
 - Flavour compounds

• Plant compounds

(For detail description refer to P–100-101 of the textbook.)

10. Write any five essential elements of diet.

(CBSE 2014)

Ans. Essential elements of diet are:

- Carbohydrates: Carbohydrates are the major source of energy.
- Fat: It is a major nutritional element and a vital aspect of healthy diet though having a bad reputation.
- Protein: Protein plays more physiological role than other major nutrients.
- Vitamins: We need vitamins to grow and develop.
- Minerals: Minerals are required to grow and develop properly.
- Water: Water is a major nutritional element that regulates body temperature, lubricate joints and protect the major organs and tissues.

F. Value-Based Question

Naman was a Class 6 student. He used to bring junk food in his lunch box daily. His teacher observed that he was neither concentrating on his studies nor actively participating in physical activities. In this matter, he had a talk with his parents and came to know that he refuses to eat roti, dal, fruits and vegetables. Due to this, he is facing these problems. (CBSE 2018)

Answer the following questions based on the above passage:

- 1. What type of problems was Naman facing?
- 2. Why should junk food not to be recommended?
- 3. What values has his teacher shown in this matter?

Ans.

- Naman was facing problems like lack of concentration and active participation in physical activities in his school.
- 2. Junk food does not contain the required nutrients for healthy life.
 - It leads to overweight and other health problems.
 - Adversely affects the growth and development.
- **3.** Being concerned, helpful, dedicated, caring, inspiring, etc.

CHAPTER 6

TEST AND MEASUREMENTS IN SPORTS

P. 118-123

A. Objective Type/Multiple-Choice Questions.

I. Multiple-Choice Questions:

- Which of the following abilities need to be measured for students in classes 1–3?
 - (a) BMI
 - (b) Flamingo Balance Test
 - (c) Plate Tapping Test
 - (d) All of these
- Ans. (d) All of these
 - 2. Plate Tapping Test is done to measure
 - (a) speed. (b) coordination.
 - (c) flexibility. (d) strength.
- **Ans.** Both (a) and (b) are correct options.
 - 3. 50 Metre Speed Test measures
 - (a) speed and acceleration.
 - (b) endurance.
 - (c) flexibility.
 - (d) muscle strength.
- Ans. (a) speed and acceleration.
- 4. 600 m Run/Walk measures
 - (a) speed. (b) endurance.
 - (c) flexibility. (d) muscle strength.
- Ans. (b) endurance.
 - 5. Sit and Reach Test is conducted for
 - (a) flexibility. (b) motor fitness.
 - (c) endurance. (d) speed. (CBSE 2020)
- Ans. (a) flexibility
 - 6. Partial Curl Up Test measures
 - (a) flexibility.
 - (b) leg strength.
 - (c) abdominal strength and endurance.
 - (d) muscle strength.
- Ans. (c) abdominal strength and endurance.
 - 7. Push ups for boys measures
 - (a) leg muscle endurance and strength.
 - (b) arm muscle endurance and strength.
 - (c) lower body endurance and strength.
 - (d) upper body endurance and strength.

- Ans. (d) upper body endurance and strength.
 - 8. Which of the following fitness test items is meant exclusively for girls?
 - (a) Modified push ups
 - (b) Standing broad jump
 - (c) Sit and reach
 - (d) Partial curl up
- Ans. (a) Modified push ups
 - 9. Which of the following factors influence(s) BMR?
 - (a) Age (b) Weight
 - (c) Height (d) All of these
- Ans. (d) All of these
- 10. Name the component which is measured by this test? (CBSE SP 2021 Term 1)

- (a) Endurance (b) Speed
- (c) Flexibility (d) Coordinative ability
- Ans. (c) Flexibility
 - 11. How many tests are there in Senior Fitness test?
 - (a) Five (b) Seven
 - (c) Six (d) Three
- Ans. (c) Six
- 12. What is the test duration for the Arm curl test? (CBSE SP 2021 Term 1)
 - (a) 1 min
 - (b) 2 min
 - (c) 30 sec
 - (d) Number of repetitions
- Ans. (c) 30 sec
 - 13. Which test is used to test the functional ability amongst senior citizens? (CBSE SP 2021 Term 1)
 - (a) Rockport one mile test
 - (b) Harvard step test
 - (c) Rikli and Jones test
 - (d) Fitness Index score
- Ans. (c) Rikli and Jones test

Physical Education Companion – 12

Select the correct set of options:

(a)	(i)–(3), (ii)–(1), (iii)–(4), (iv)–(2)
(b)	(i)–(2), (ii)–(4), (iii)–(1), (iv)–(3)
(c)	(i)–(1), (ii)–(3), (iii)–(4), (iv)–(2)
(d)	(i) (A) (ii) (2) (iii) (2) (iv) (1)

(d) (i)–(4), (ii)–(3), (iii)–(2), (iv)–(1)

Ans. (a) (i)–(3), (ii)–(1), (iii)–(4), (iv)–(2)

List I

List II

- Chair stand test Lower Body strength (i) (1)
 - Arm curl test (2)Aerobic Endurance
- Back scratch test (3) Upper body strength (iii)
- Upper body flexibility (iv) Six minute walk (4) test

Select the correct set of options:

- (a) (i)–(1), (ii)–(3), (iii)–(4), (iv)–(2)
- (b) (i)-(2), (ii)-(3), (iii)-(1), (iv)-(4)
- (c) (i)-(1), (ii)-(3), (iii)-(2), (iv)-(4)
- (d) (i)-(2), (ii)-(3), (iii)-(4), (iv)-(1)

(CBSE SP 2022)

CBQ

- **Ans.** (a) (i)–(1), (ii)–(3), (iii)–(4), (iv)–(2)
- III. Assertion-Reason Type Questions:

Given below are the two statements labelled Assertion (A) and Reason (R).

A: The Fullerton Functional Fitness Test is an expensive method of assessing the physical traits that senior citizens need in order to carry out their occasional activities.

R: It is a tool to measure the functional fitness of senior citizens by using six parameters.

In the context of the two statements given above, which one of the following is correct?

- (a) Both (A) and (R) are true and (R) is the correct explanation of (A).
- (b) Both (A) and (R) are true but (R) is not the correct explanation of (A).
- (c) (A) is true, but (R) is false.
- (d) (A) is false, but (R) is true.

Ans. (d) (A) is false, but (R) is true.

Physical Education Companion – 12 68 5 yards

IV. Data-Based Questions:

CBQ

Recommended ranges for eight foot up and go test for male is shown in the following table.

Norms for Male (in Seconds)				
Age	Below Average		Above Average	
60–64	> 5.6	5.6 to 3.8	< 3.8	
65–69	> 5.7	5.7 to 4.3	< 4.3	
70–74	> 6.0	6.0 to 4.2	< 4.2	
75–79	> 7.2	7.2 to 4.6	< 4.6	
80–84	> 7.6	7.6 to 5.2	< 5.2	
85–89	> 8.9	8.9 to 5.3	< 5.3	
90–94	> 10.0	10.0 to 6.2	< 6.2	

On the basis of the chart given above, answer the following questions:

- 1. If a male senior citizen of 65 years completes two trials in the eight foot up and go test in 4.6 and 4.4 seconds respectively, his agility will be determined as
 - (a) Below average. (b) Average.
 - (c) Above average. (d) Extremely poor.
- Ans. (b) Average
 - 2. If a senior citizen (male) of 78 years completes two trials in the eight foot up and go test in 7.6 and 7.8 seconds respectively, his agility will be determined as
 - (a) Below average. (b) Average.
 - (c) Above average. (d) Extremely poor.
- Ans. (a) Below average.
 - If the average of two trials of a male senior citizen aged 82 years in the eight foot up and go test is 7.9 seconds, his agility score will be considered as
 - (a) Below average. (b) Average.
 - (c) Above average. (d) Extremely poor.
- Ans. (a) Below average.

V. Picture-Based Questions:

 Identify the following fitness test items and name them:

CBO

- (d) Partial curl up test
- **2.** Identify the odd one.

- Ans. (a) Chair Stand Test;
 - (b) Chair Sit and Reach Test;
 - (c) Modified Push-ups;
 - (d) Arm Curl Test

VI. Case-Based Questions:

1. Arm Curl Test was conducted on 5 individuals in the age group 60–64 years and the data collected indicated that 3 people fell in the below average category.

On the basis of the case given, answer the following questions:

- (a) What would have been the average range?
- (b) What is the advantage of this test?
- (c) What is the duration of this exercise?
- (d) The total number of arm curls performed in the above duration is called a
- Ans. (a) 16 to 22 for men and 13 to 19 for women
 - (b) To assess the strength of upper body of senior citizen
 - (c) 30 seconds
 - (d) Score

CBQ

2. Observe the given figure and answer the following questions.

- (a) Which test has been shown in the figure?
- (b) What does it measure?
- (c) Lying down, the knees of the student are bent at an angle of _____
- (d) The duration of a complete test is _____ seconds.
- Ans. (a) Partial curl up test
 - (b) The abdominal strength and endurance
 - (c) 90 degrees
 - (d) 30 seconds

B. Very Short Answer Type Questions

- Name the SAI Khelo India Fitness tests for age group 5 – 8 years.
- Ans. The SAI Khelo India Fitness tests for age group 5 – 8 years are as follows:
 - i. Body Mass Index test
 - ii. Flamingo Balance test
 - iii. Plate Tapping test
 - Name the SAI Khelo India Fitness tests for age group 9 – 18 years.
- Ans. The SAI Khelo India Fitness tests for age group 9 – 18 years are as follows:
 - i. Body Mass Index test
 - ii. 50 m speed test
 - iii. 600 m Run /walk test
 - iv. Sit and reach test
 - v. Partial curl up
 - vi. Push ups for boys and modified push ups for girls
 - **3.** Which component is measured through sit and reach test?
- Ans. Flexibility
 - 4. What is the purpose of push ups (boys) fitness test?
- Ans. To test or measure the upper body endurance and strength.

- 5. What is the purpose of modified push ups (girls) fitness test?
- Ans. To test or measure the upper body endurance and strength.
 - 6. Name the tests devised by Rikli and Jones to determine fitness of senior citizens.
- Ans. Rikli and Jones Senior Citizen Fitness Test
 - i. Chair Stand Test for lower body strength
 - ii. Arm Curl Test for upper body strength
 - iii. Chair Sit and Reach Test for lower body flexibility
 - iv. Back Scratch Test for upper body flexibility
 - v. Eight Foot Up and Go Test for agility
 - vi. Six Minute Walk Test for Aerobic Endurance
 - 7. Your grandmother feels that she has reduced her upper flexibility and therefore she wants to test herself. Which test would you suggest to her? (CBSE 2015, 2017)
- Ans. The test I would suggest to her is 'Arm curl test' for upper body strength.
 - Which test would you suggest for your grandmother to test lower body flexibility? (CBSE 2015)
- Ans. I would suggest grandmother for 'Chair Stand Test' to measure lower body flexibility.
 - 9. Which motor quality does a senior citizen lack who finds difficulty in tying the shoe laces while sitting on the chair? (CBSE SP 2015)
- Ans. The senior citizen who finds difficulty in tying the shoe laces lacks the lower body flexibility.
 - **10.** Which test would you suggest to measure upper body strength for aged population? (CBSE 2016)
- Ans. I would suggest to measure upper strength for aged population test named 'Arm curl test for upper body strength'.

C. Short Answer Type-I Questions

- 1. How is BMI calculated?
- Ans. BMI, or Body Mass Index, is calculated by dividing a person's weight in kilograms by their height in meters squared. The formula is BMI = weight (kg) / height (m²). It is a common tool used to estimate body fat and assess health risks associated with weight.
 - **2.** Which equipment are used to measure height and weight during BMI measurement?
- Ans. The equipment commonly used to measure height during BMI measurement is a stadiometer,

which is a ruler or rod attached to a wall or a standalone device that measures height in centimetres. The equipment used to measure weight is a scale, which can be mechanical or digital and measures weight in kilograms or pounds.

- Write down the objectives and administration of the Flamingo Test. (CBSE SP 2022)
- **Ans.** The Flamingo balance test is a tool used to assess an individual's ability to maintain balance. The objective of the test is to assess postural sway and balance control. During the test, the participant stands on one leg on a beam. The total number of falls or loss of balance in 60 seconds of balancing is recorded.
 - 4. How is scoring done in Flamingo Balance Test?
- **Ans.** In Flamingo Balance test, the number of falls in 60 seconds of balancing is counted. If there are more than 15 falls in the first 30 seconds, the test is terminated. The total number of falls or loss of balance in 60 seconds of balancing is recorded.
 - 5. What is the purpose of doing Plate Tapping Test?
- Ans. To test the speed and coordination of limb movement.
 - **6.** Which equipment are needed in Plate Tapping Test?
- Ans. Table (adjustable height), 2 yellow discs (10 cm radius), rectangle (30 × 20 cm), stopwatch
 - 7. Write the formula for calculating BMR.
- Ans. To calculate BMR, the Harris–Benedict formula or Mifflin-St Jeor formula is used. The Harris– Benedict equation was revised by Mifflin and St Jeor in 1990: Men: BMR = $(10 \times \text{weight in kg})$ + $(6.25 \times \text{height in cm}) - (5 \times \text{age in years}) + 5$ Women: BMR = $(10 \times \text{weight in kg}) + (6.25 \times \text{height in cm}) - (5 \times \text{age in years}) - 161$
 - 8. What are the factors that influence BMR?
- **Ans.** Age, weight, height, gender, genetics, body composition, exercise, food habits, environmental temperature, etc. are the factors that influence the BMR of a person.
 - **9.** What are the rules for conducting Partial Curl Up Test?
- Ans. The partial curl-up test is conducted to assess an individual's abdominal muscle endurance. The rules for conducting this test include lying on the back with knees bent, feet flat on the floor, arms crossed over the chest, and performing a curl-up until the elbows touch the knees. The

test is repeated at a set pace, and the number of repetitions completed correctly is recorded.

Scoring: Record the maximum possible number of curl ups in the given time (30 seconds).

- **10.** Which six parameters are used to measure the functional fitness of senior citizens?
- Ans. The six parameters used to measure the functional fitness of senior citizens include aerobic endurance, muscular strength, muscular endurance, flexibility, body composition and balance. These parameters assess the ability of seniors to perform daily activities independently, maintain mobility, and reduce the risk of falls and other health complications associated with aging.
 - **11.** A senior citizen wants to improve his speed and balance. Which test would you recommend? How would you administer it?
- Ans. I would recommend the Eight Foot Up and Go test to improve the senior citizen's speed and balance. To administer the test, the participant stands up from a chair, walks 8 foot, turns, walks back to the chair and sits down. The time taken to complete the test is recorded. The test assesses mobility, balance and gait speed. The senior citizen can perform the test once a day or as recommended by their healthcare provider.

D. Short Answer Type–II Questions

- **1.** Write the steps of Plate Tapping Test.
- Ans. Refer to page 109 of the book
- 2. Write briefly about 50 m Standing Start or Dash.
- Ans. Refer to page 110 of the book
 - 3. Write briefly about Sit and Reach Test.
- Ans. Refer to page 110 of the book
 - 4. What is the procedure of modified push ups for girls?
- Ans. The procedure of modified push-ups for girls: The push-up begins in a kneeling position, with the hands and knees touching ground. The knees are kept slightly apart; the arms are at shoulder width apart, extended and at a right angle to the body. Keeping the back straight and holding core tight, the student has to lower the body until there is a 90-degree angle at the elbows, then returns to the starting position with the arms extended. The action is repeated until exhaustion or until the time limit is reached. In case of timed tests, the maximum number of correct push-ups performed are noted.
 - 5. Write the main difference between push ups for boys and modified push ups for girls.

Physical Education Companion – 12

Ans. In case of boys push-up begins with the hands and toes touching the ground, and the body and legs in a straight line. But in case of girl the push-up begins in a kneeling position, with the hands and knees touching ground. The knees are kept slightly apart; the arms are at shoulder width apart, extended and at a right angle to the body.

> In boy push-ups, the back and knees are kept straight. The student has to lower the body until there is a 90-degree angle at the elbows, then returns to the starting position with the arms extended.

> In girl push-ups, the back is kept straight and core tight. The student has to lower the body until there is a 90-degree angle at the elbows, then returns to the starting position with the arms extended.

- **6.** What are the factors on which the BMR of a person depends?
- Ans. Basal metabolic rate (BMR) refers to the number of calories the body burns at rest to perform essential functions such as breathing, circulating blood and maintaining bodv temperature. BMR varies among individuals and is influenced by several factors, including age, sex, body size and composition, hormonal imbalances, genetics, diet, and physical activity level. Individuals with higher muscle mass and active lifestyle have a higher BMR, while those with sedentary lifestyle, low muscle mass, or hormonal imbalances have a lower BMR. Aging and certain medical conditions can also affect BMR. Measuring BMR can provide insight into the body's energy needs, and help with weight management and nutritional planning.
 - **7.** Make a table calculating the AMR of individuals depending on their daily activity/exercise regime.
- **Ans.** AMR, or the total daily energy expenditure, is the sum of an individual's BMR and the calories expended through physical activity. The daily activity/exercise regime plays a significant role in determining an individual's AMR. Here is an example table showing estimated AMR for different activity levels:

Activity Level	Description	Estimated AMR (calories/day)
Sedentary	Little or no exercise, desk job	BMR × 1.2
Lightly Active life	Light exercise or sports 1-3 days a week	BMR × 1.375

Moderately Active life	Moderate exercise or sports 3-5 days a week	BMR × 1.55
Active life	Hard exercise or sports 6-7 days a week	BMR × 1.725
Very Active life	Very hard exercise or sports, physical job, training 6-7 days/day	BMR × 1.9

It is important to note that these estimates are based on average values and may vary depending on individual factors such as age, sex, body composition and genetics.

8. Create a mind map on the components of Rikli and Jones Test along with their objectives.

Ans. Mind map

9. Write on at least two components included in the Rikli and Jones Test.

Ans. CHAIR STAND TEST:

Purpose: The purpose of this test is to test the strength of the lower body, especially the legs, which are very necessary for carrying out various daily activities like sitting down and getting up, kneeling, walking, etc.

Equipment required: A chair without arms and a straight back with seat of at least 44 cm and a stopwatch.

Procedure: The chair should be placed against a wall where it will be stable. The participant should sit in the middle of the chair with her/ his feet flat on the floor, shoulder width apart, and spine erect. She/ he should cross the arms at the wrist and place them against the chest. The participant must stand up completely from the sitting position when the test partner starts the test by using the stopwatch. This process is repeated for 30 seconds. A complete chair stand is taken from the position of sitting to position of standing up. The test partner and participant should count the total number of complete chair stands.

Physical Education Companion – 12

Scoring: The total number of completed chair stands during 30 seconds is called score. The recommended ranges for this test is based on different age groups.

ARM CURL TEST:

Purpose: The main purpose of this test is to assess the strength of the upper body. The upper body helps in performing various activities like carrying, washing, eating, stirring, writing, lifting and so on.

Equipment required: Five pound weight for women and 8 pound weight for men, a stopwatch and a straight-back chair with no arms are required for this test.

Procedure: The chair should be placed against a wall where it will be stable. The participant should sit in the middle of the chair. The dominant arm must do the arm curl. The participant holds the weight in the hand using a suitable grip. The palms should be facing towards the body. The position of the arm should be vertically downwards. It is the lower arm that has to move freely while keeping the upper arm immovable. The test partner will tell when to begin and will time for 30 seconds using a stopwatch or a watch with a seconds hand. The participant should do a full curl as many times as she/he can in the allotted 30 seconds time period moving in a controlled manner. The participant must squeeze her/his lower arm against the upper arm at the top of each curl, returning to a straight arm each time and should not swing the weight. Record the score on the scorecard.

Scoring: The total number of arm curls performed in 30 seconds of duration is called a score. The recommended ranges for this test is based on different age groups.

E. Long Answer Type Questions

 Make a table of test items listed under fitness test by SAI (age group 9 – 18 years) along with the objectives of conducting them. Explain the administration of any one of them.

(CBSE SP 2022)

Ans. Here is a table of the SAI Khelo India Fitness tests for age group 9-18 years along with their objectives:

Test Item	Objectives		
Body Mass Index test	Assesses composition health	and	body overall

50 m speed test	Assesses speed and agility	
600m Run/walk test	Assesses cardiovascular endurance	
Sit and reach test	Assesses flexibility	
Partial curl up	Assesses core strength and endurance	
Push-ups for boys and modified push-ups for girls	Assesses upper body strength and endurance	

One of the tests listed above is the partial curlup test. The test requires the participant to lie on their back with their knees bent, feet flat on the floor, and hands placed under their lower back. The participant then raises their head and shoulders off the ground while keeping their feet and lower back in contact with the ground. The test assesses core strength and endurance, which is essential for maintaining a healthy spine, performing physical activities that require stability, and preventing lower back injuries. It is important to ensure that the participant performs the curl-ups in a controlled manner and does not jerk or swing their upper body to avoid injury. The test continues for 1 minute, and the number of successful repetitions is recorded as the final result.

- 2. How is BMI measured? Explain with example.
- Ans. Refer to pages 108-109 of the book.
 - 3. Write in detail about Flamingo Balance Test.
- Ans. Refer to page 109 of the book.
 - **4.** How is BMR computed? Describe various formulas to find out AMR using BMR values.
- **Ans.** BMR (Basal Metabolic Rate) is the amount of energy required to maintain essential body functions such as breathing, heartbeat, and body temperature at rest. It is usually expressed as the number of calories burned per day.

There are several formulas to calculate BMR, including the Harris-Benedict equation and the Mifflin St. Jeor equation. These formulas take into account factors such as age, gender, height and weight.

Once BMR is determined, AMR (Active Metabolic Rate) can be calculated by multiplying BMR by an activity factor, which represents the level of physical activity. The activity factor can range from 1.2 for sedentary individuals to 1.9 for very active individuals.

Here are some formulas to calculate AMR using BMR:

• Sedentary: BMR × 1.2

- Lightly active: BMR × 1.375
- Moderately active: BMR × 1.55
- Active: BMR × 1.725
- Very active: BMR × 1.9

For example, if a sedentary individual has a BMR of 1500 calories per day, their AMR would be 1800 calories per day (1500×1.2). These formulas can be used to estimate the number of calories required for daily activities and weight management.

- 5. Write in detail about Push ups for boys and Modified Push ups for girls bringing out their differences as well.
- Ans. Refer to page 111 of the book.
 - 6. Write about any three tests that are conducted under Rikli and Jones Test.
- Ans. Refer to pages 112-117 of the book.
 - **7.** Mention the purpose of all the tests that are conducted under Rikli and Jones Test.
- Ans. Refer to pages 112-117 of the book.
 - **8.** How are upper body strength and lower body strength measured in senior citizens?
- Ans. Upper body strength is measured using the arm curl test, and lower body strength is measured using the chair stand test. Refer to pages 112-

114 of the book.

F. Value-Based Question

Every morning Akanksha goes to the park near her home. She noticed that many senior citizens have some or the other type of fitness problems in terms of flexibility and strength. She decided to check the fitness level of each person in the park.

Answer the following questions based on the above passage:

- **1.** Explain the tests used by Akanksha for measuring the fitness of the people.
- 2. What values are depicted by Akankska in this question?

Ans.

- 1. The tests used by Akanksha for measuring the fitness of the people are:
 - Chair stand test: testing lower body strength.
 - Arm curl test: testing upper body test.
 - Chair sit and reach test: lower body flexibility test.
 - 8 Foot up and go test: agility test.
 - Walk test (6 min) or step in place test (2 min) This test is used to assess fitness.
- 2. The values shown by Akanksha that she is very

CHAPTER 7 PHYSIOLOGY AND INJURIES IN SPORTS P. 141-147 A. Objective Type/Multiple-Choice Questions I. Multiple-Choice Questions: Slow twitch fibres are _____ ___ in colour. (CBSE SP 2022) (a) white (b) red (c) transparent (d) brown Ans. (b) red 2. What is the possible range of movement in a joint or a series of joints called? (a) Flexibility (b) Explosive strength (c) Mobility (d) Muscle composition Ans. (a) Flexibility 3. Which of these acids gets accumulated in the muscles during intense physical activity? (a) Citric acid (b) Lactic acid (c) Nitric acid (d) Acetic acid Ans. (b) Lactic acid 4. Which of these terms refers to the air that moves in and out of the lungs with each breath in a normal restive mode? (a) Second wind (b) Vital air (c) Tidal air (d) Residual wind Ans. (c) Tidal air 5. Increase in size of lungs and chest is one of the process of adaptions that our system undergoes when we exercise regularly for a long-time. (a) respiratory (b) cardiovascular (c) cardio-respiratory (d) none of these

- Ans. (c) cardio-respiratory
 - 6. What is cardiac output? (CBSE 2020)
 - (a) Blood pumped in one minute
 - (b) Blood pumped in one beat
 - (c) Blood pumped in one stroke
 - (d) None of these
- Ans. (a) Blood pumped in one minute
 - The amount of oxygen of which can be absorbed and consumed by the working muscles from the blood is called _____ (CBSE SQP 2022)

- (a) oxygen uptake (b) oxygen intake
- (c) oxygen transport (d) vital capacity
- Ans. (a) oxygen uptake
 - 8. Joint structure, age and gender, internal environment and previous injury are the physiological factors that determine _____
 - (a) endurance. (b) speed.
 - (c) flexibility. (d) strength.
- Ans. (b) speed
 - **9.** Which of the categories fall under classification of sports injuries?
 - (a) Direct and Indirect Injury
 - (b) Overuse Injury
 - (c) Underuse Injury
 - (d) Only (a) and (b)
- Ans. (d) Only (a) and (b)
- **10.** In what type of fracture do bones break into three or more pieces, seen often in cycling and motorcycling?
 - (a) Oblique fracture
 - (b) Green stick fracture
 - (c) Comminuted fracture
 - (d) Compound fracture
- Ans. (c) Comminuted fracture
- 11. When the bone is broken into more than one piece, it is called (CBSE 2020)
 - (a) comminuted fracture.
 - (b) compound fracture.
 - (c) simple fracture.
 - (d) greenstick fracture.
- Ans. (a) comminuted fracture
 - **12.** How many types of fractures are classified under bone injuries?
 - (a) Seven (b) Nine
 - (c) Six (d) Four
- Ans. (b) Nine
- **13.** In which of the following sports does the joint injuries occur?
 - (a) Football (b) Hockey
 - (c) Volleyball (d) All of these
- Ans. (d) All of these
 - 14. PRICE treatment is for
 - (a) fractures. (b) abrasions.
 - (c) sprains. (d) lacerations.
- Ans. (c) sprains

(CBSE 2020)

 (a	s. (a) (i)-2; (ii)-4; (iii)-1; (iv)-3				
Assertion-Reason Type Questions:					
	Given below are the two statements labelled Assertion (A) and Reason (R).				

A: The cardio-respiratory system regulates the vital processes of supplying our body with nutrients, cellular waste, hormones and O_2 for its smooth functioning.

R: When we exercise, the body demands more O_2 and nutrients. So, the heart operates harder to pump more blood throughout the body to meet the increased demands.

In the context of the two statements given above, which one of the following is correct?

- (a) Both (A) and (R) are true and (R) is the correct explanation of (A).
- (b) Both (A) and (R) are true but (R) is not the correct explanation of (A).
- (c) (A) is true, but (R) is false.
- (d) (A) is false, but (R) is true.

Ans. (b) Both (A) and (R) are true but (R) is not the correct explanation of (A).

IV. Data-Based Questions:

CBQ

A survey was conducted in a sports academy on the kind of injuries that the athletes/sports persons experienced:

On the basis of the chart given above, answer the following questions:

- 1. Strain being the most common type of injury; how is it classified further?
 - (a) Into three degrees
 - (b) Into five sub-categories
 - (c) Into seven styles
 - (d) Into four types
- 2. The sports persons who experienced laceration could possibly be training in
 - (a) wicket keeping (b) boxing
 - (c) skating (d) tennis
- 3. What do bone injuries include?
 - (a) Fractures
 - (b) Dislocation of jaw and wrist
 - (c) Tissue damages
 - (d) Dislocation of hip and shoulder
- Ans. 1. (a) Into three categories; 2. (c) Skating; 3. (a) Fractures
- V. Picture-Based Questions:

Identify the following types of fractures and name them:

2.

4.

Ans. 1. Transverse Fracture; 2. Comminuted Fracture; 3. Oblique Displaced Fracture;
4. Greenstick Fracture

VI. Case-Based Questions:

CBQ

- While playing badminton, Radhika accidentally bumped against the pole and suffered contusion. On the basis of the case given, answer the following questions:
 - (a) What type of injury is contusion?
 - (b) What gets ruptured?
 - (c) The affected area becomes _____, then _____, then
 - (d) The affected area also _____ due to leakage of blood and fluids.
- Ans. (a) Muscle injury
 - (b) Blood vessels
 - (c) red, blue, purple
 - (d) swells
 - 2. Look at the given figure and answer the following questions:

- (a) Which type of dislocation is shown here?
- (b) Dislocation is a type of _____ injury.
- (c) Why are such injuries of a grave nature?
- (d) In the dislocation shown, the head of the ______ is forced out of its _____ in the
- Ans. (a) Hip dislocation
 - (b) joint
 - (c) Such injuries are of a grave nature as the joints and the bones they connect tend to get disconnected.

(CBSE 2016)

(d) thigh bone, socket, pelvis

B. Very Short Answer Type Questions

- What is stroke volume?
- Ans. Stroke volume is the amount of blood ejected per beat from the left ventricle.
 - 2. Which type of muscle fibres determine strength?
- Ans. Muscles with higher percentage of fast-twitch fibres determine strength.

- **3.** What role does the nervous system play with regard to the speed of an athlete?
- Ans. The nervous system excites and inhibits the motor centres associated with contraction and relaxation of the related muscles at the highest possible speed. This process is called mobility of the nervous system enables these excitations and inhibitions, tension spreads all over the body due to the activity. Consequently, the speed decreases. This mobility is greatly affected by genetics and can be trained only to a certain degree.
 - **4.** Suggest any two physiological factors determining speed.
- Ans. Mobility of the nervous system and muscular composition are the two factors that determine speed.
 - 5. What is the relationship between explosive strength and speed? (CBSE 2019)
- Ans. Explosive strength is the ability to produce a strong muscle force within a very limited time at a fast pace, as in sports activities or regaining our balance when we are about to fall. In addition to the individual's metabolic process, the composition, size and coordination of muscles together determine explosive strength. All these factors can be enhanced with training to improve speed up to a certain degree, obviously with the exception of muscle composition.
 - 6. Name the energy storage compounds found in the muscular tissues.
- Ans. The high-energy phosphates in the storage composition, size and coordination of muscles together determine explosive strength.
 - 7. What do you mean by aerobic capacity?

(CBSE 2016)

- Ans. The ability to sustain an activity for a length of time using the energy derived from oxygen consumption is one of the crucial factors which determines endurance. In other words, aerobic capacity is the functional capacity of the body to supply sufficient amount of O_2 to the muscles for generation of energy.
 - 8. Define explosive strength. (CBSE 2013)
- **Ans.** Explosive strength is the ability to produce a strong muscle force within a very limited time at a fast pace, as in sports activities or regaining our balance when we are about to fall in.
 - 9. What is oxygen uptake? (CBSE 2017)
- Ans. It is the amount of O_2 which can be extracted from the blood by the muscles for consumption.

In other words, it is the amount of O_2 diffused from capillaries to mitochondria present in tissues.

- 10. How does muscular strength influence flexibility?
- Ans. Body movements especially against gravity or external forces are possible if the associated muscles are strong enough to make the movements. Therefore, muscular strength is a determinant factor for flexibility. Weak muscles deter the range of motion. Muscular strength can be highly developed with training to upgrade flexibility.
- 11. What do you know about the term cardiac output? (CBSE 2018)
- Ans. The amount of blood (in litres) pumped by the heart in one minute is called cardiac output.
- 12. Explain the term hypertrophy of muscles.

(CBSE 2015)

- **Ans.** Hypertrophy is an increase in the thickness of an individual's muscle fibre. Generally, it is called an increase in size of muscle.
 - **13.** Why is increasing internal body heat important for flexibility?
- Ans. Internal environment: Joints and muscles are more flexible at body temperatures that are 1–2 °C higher than the normal. So, flexibility is also affected by the internal environment. For instance, exposure to a warm bath increases body temperature leading to an increase in flexibility. On the contrary, exposure to cold temperature reduces it. Generally, the body tends to be more flexible in the afternoon than in the morning.
- **14.** What is vital air capacity?
- Ans. It is the amount of air which can be inhaled and expelled with maximum force that an individual is capable of.
 - **15.** Why does the colour of muscles change after exercising?
- **Ans.** After exercising, new capillaries are formed in order to raise the level of blood circulation for sufficient energy supply and this changes the colour of the muscles.
- **16.** What is direct injury?
- **Ans.** A direct injury is an injury incurred where the body makes contact with an external force. Some examples of direct injuries are broken bones, bruises, abrasions, blisters, dislocations, etc.

- 17. What is indirect injury?
- **Ans.** An indirect injury an injury caused by forces inside the body like excess strain on muscles and ligaments. Some examples of indirect injury are pulled hamstring, sprained ankle, muscle sprains, etc.
 - **18.** What is overuse injury?
- Ans. An overuse injury occurs when specific parts of our body are used over a period of time, especially when the movements are repetitive.
- **19.** What is soft tissue injury? (CBSE 2019)
- **Ans.** Soft tissue injuries can be direct like a blister or bruise at the site of external force or they can be indirect injuries caused by internal forces such as a strain or sprain, for example, sprained ankle.
 - 20. Mention the various types of soft tissue injury.

(CBSE SP 2016)

- **Ans.** Contusion, strain, sprain, abrasion, laceration, incision, hematoma are the types of soft tissue injury.
 - **21.** What is bone injury? What are the types of bone injury?
- **Ans.** Bone injuries are fractures caused by forces or pressures greater than the strength of the osseous (Connective) tissue. The different types of bone injuries are:
 - i. Simple fracture
 - ii. Compound fracture
 - iii. Complicated fracture
 - iv. Stress fracture
 - v. Green stick fracture
 - vi. Comminuted fracture
 - vii. Impacted fracture
 - viii. Transverse fracture
 - ix. Oblique fracture
- 22. What type of fracture is known as 'Green Stick Fracture'? (CBSE 2018)
- Ans. Bending of bones or a slight crack is called green stick fracture. Children are more vulnerable to this type of fracture due to underdeveloped bones.
 - 23. What type of injuries are laceration and incision? Explain. (CBSE 2019)
- **Ans.** Laceration is the tearing of skin which results in an irregular cut. It is caused of injury with a sharp sports equipment. Incision is a smoothly-cut skin wound made by a sharp sport equipment, spike, etc.

24. Which type of sports injury is known as strain?

(CBSE 2019)

- **Ans.** Strains are caused by excessive use or forced stretching of the muscles or tendons. There may be complete tearing of muscles or tendons. Strains are common in contact sports such as boxing, football, hockey, wrestling, etc.
- **25.** What is joint injury? What are the types of joint injury?
- Ans. Joint injuries usually occur in contact sports such as football, hockey, volleyball, gymnastics, etc. They tend to be of grave nature as the joints and the bones they connect tend to get disconnected. The different types of joint injuries are:
 - i. Dislocation of the jaw
 - ii. Dislocation of the shoulder joint
 - iii. Dislocation of hip joint
 - iv. Dislocation of the wrist
 - 26. What type of sports injury is contusion?
 - (CBSE 2016)
- **Ans.** Contusion is a muscle injury caused by a blow to the skin, such as getting hit or bumping against something which leads to ruptured blood vessels. The affected area becomes red, then blue and then purple.
- 27. What are PRICE and MICE in treatment of sports injuries?
- Ans. PRICE stands for Protection, Rest, Ice, Compression and Elevation. PRICE procedure is an effective method to apply during the first 24–48 hours after injury. MICE stands for Mobilisation, Ice, Compression and Elevation. After the symptoms of inflammation subside, the procedure of MICE should be followed until the injury is healed.
- 28. What kind of sports injury can be termed as 'abrasion'? (CBSE 2016)
- Ans. Abrasion is a superficial injury to the skin when something rubs against it. It does not penetrate deeper than the epidermal layer of the skin. Friction between skin and hard or rough surface leads to abrasion.

C. Short Answer Type-I Questions

- 1. Mention any three physiological factors determining speed.
- Ans. The three physiological determinants of speed are:

- Mobility of the nervous system: The nervous system excites and inhibits the motor centres associated with contraction and relaxation of the related muscles at the highest possible speed. This process is called mobility of the nervous system. After the limited few seconds during which the nervous system enables these excitations and inhibitions, tension spreads all over the body due to the activity. Consequently, the speed decreases. This mobility is greatly affected by genetics and can be trained only to a certain degree.
- **Muscle composition:** Muscles with higher percentage of fast-twitch fibres contract with greater speed than those with a low percentage. Genetics determine their percentage and so it cannot be altered by any amount of training. Also, fast-twitch fibres exist in varying quantities in different types of muscles. That is why, different parts of the body react with different speeds.
- Flexibility: It is the possible range of movement in a joint or a series of joints. Increase in flexibility assists the performance of the highest range of movement with the least internal resistance. Therefore, flexibility has a mild influence on speed. It also helps to maximise the implementation of explosive strength.
- **2.** Mention any three physiological factors determining endurance.
- Ans. The three physiological determinants of endurance are:
 - Lactic acid tolerance: This is an efficient predictor of endurance capacity. It is the ability to tolerate accumulation of lactic acid, especially during activities spanning 40 seconds or more. This accumulation is due to imbalance in formation and removal of lactic acid in the body. Endurance can be improved by enhancing lactic acid tolerance with proper training.
 - Movement economy: Saving energy is always advantageous in endurance sports, to maintain the level of performance throughout the whole activity. Economical movements minimise energy consumption. This enables one to make precise movements and reduce unnecessary movements.
 - **Muscle composition:** Muscles have two types of fibres, namely, fast-twitch and slow twitch fibres. Slow-twitch fibres exert a small

force and maintain it for a long time. That is why, higher percentage of slow-twitch fibres is ideal for endurance activities. However, this percentage is determined by genetic factors.

- 3. Explain any two physiological factors help in determining endurance. (CBSE 2022)
- Ans. See answer 2 above
 - 4. Differentiate between oxygen intake and oxygen uptake.
- Ans. Oxygen intake refers to the process of breathing in oxygen from the air into the lungs. It is the amount of oxygen that is inhaled into the body during the breathing process. Oxygen intake is affected by several factors, including the rate and depth of breathing, the concentration of oxygen in the air, and the presence of any respiratory disorders.

On the other hand, oxygen uptake refers to the process of oxygen being absorbed by the body's tissues, including the muscles and organs, to be used in cellular respiration. Oxygen uptake is affected by various factors, including the level of physical activity, the health and efficiency of the cardiovascular and respiratory systems, and the availability of oxygen in the blood. In summary, oxygen intake is the amount of oxygen inhaled into the body, while oxygen uptake is the amount of oxygen absorbed by the body's tissues for use in cellular respiration.

- **5.** Write any three effects of exercise on Cardiorespiratory system.
- Ans. By doing exercise regularly for a long time the cardiovascular-respiratory system undergoes a certain process of adaptations known as long-term effects of exercise. These are listed below:
 - · Increase in the size of heart
 - Decrease in resting heart rate
 - Stroke volume increases at rest
 - 6. List down any four effects of exercise on muscular system. (CBSE SP 2022)
- Ans. Regular exercise has several beneficial effects on the muscular system. Here are four of them:
 - i. Increased muscle strength: Exercise causes the muscles to work harder than usual, which results in increased strength and endurance. This is due to the fact that regular exercise promotes the growth of new muscle fibres and increases the size of existing ones.
 - ii. Improved muscle flexibility: Exercise helps to improve muscle flexibility, which

refers to the range of motion of a joint. Stretching exercises, in particular, help to improve flexibility and prevent injury by making the muscles more pliable.

- iii. Enhanced muscle endurance: Exercise improves muscle endurance, which is the ability of the muscles to continue working over an extended period of time. Endurance exercises such as jogging, cycling, and swimming help to develop the cardiovascular system, which in turn increases the oxygen supply to the muscles.
- iv. Reduced muscle loss: Regular exercise can help to reduce muscle loss, which is a common problem that occurs with age. Exercise promotes the production of hormones that stimulate muscle growth, which helps to preserve muscle mass and prevent atrophy.
- 7. Explain any two types of soft tissue injuries with help of examples. (CBSE SP 2022)
- Ans. Soft tissue injuries, such as strains and sprains, are injuries to the body's connective tissues. A strain is a stretch or tear in a muscle or tendon, while a sprain is a stretch or tear in a ligament. Examples of strains include hamstring strains and rotator cuff strains, while examples of sprains include ankle sprains and wrist sprains. These injuries can be caused by overuse, repetitive motion, or sudden trauma.
 - 8. Differentiate between strain and sprain.
- **Ans.** A strain is a stretch or tear in a muscle or tendon, while a sprain is a stretch or tear in a ligament. Muscles and tendons connect muscles to bones, while ligaments connect bones to other bones. Strains are typically caused by overuse, repetitive motion, or sudden trauma, while sprains are often caused by sudden twisting or stretching of a joint. Both strains and sprains can range from mild to severe and can cause pain, swelling, and limited mobility.
 - **9.** Mention any three different types of bone injuries.
- Ans. Refer to page 133 of the book.
- **10.** Write any three different types of joint injuries.
- Ans. Refer to pages 133-134 of the book.
- 11. What is Laceration and how can it be managed? (CBSE SP 2021 Term 2)
- Ans. Laceration is the tearing of skin which results in an irregular cut. It is caused due to injury with a sharp sports equipment. It can be managed in the following manner:

- The first and foremost step is to stop the bleeding by applying pressure on the laceration and holding it above the heart level for 15 minutes. Pressure points also may be used if bleeding persists.
- After the bleeding stops, wash the area with lukewarm water and mild soap or antibacterial cleansers. Repeat the first step if it bleeds again.
- In minor cases, stitches are not required and the wound can be treated by applying an antibiotic ointment and covering it up with a bandage.

D. Short Answer Type-II Questions

- How does the higher concentration of testosterone set males apart from females? Give two examples.
- **Ans.** Males have a higher concentration of androgens such as testosterone, while females have a concentration of oestrogens. Therefore, the greater amount of testosterone gives males their deeper voice. Higher levels of testosterone helps in producing more RBCs.
 - 2. Explain any three components of physical fitness. (CBSE 2012)
- Ans. The three factors or components which determine physical fitness are as under:
 - Size of the muscle: Size is an important determinant of strength. Larger muscles can exert greater amount of force than smaller ones. It has been noted that while the same amount of force is produced by the male and female muscles of the same type, males are stronger because their muscles are larger, and thus more powerful. Weight training increases the size of muscles and is used as an effective method of strength training.
 - Intensity of nerve impulse: Muscles have several motor units. These units contract whenever a nerve impulse from the central nervous system stimulates them. Intense nerve impulse stimulates more number of motor units, which raises the strength of the muscular contraction. Hence, impulse also determines strength.
 - **Muscle composition:** Muscles are composed of two types of fibres, fast twitch fibres and which can contract swiftly and produce more force, and slow-twitch fibres, which contract at a slower speed but which can sustain the contraction for a longer duration of time. Muscles with higher percentage of fast-twitch

fibres are superior in strength. Therefore, strength is also determined by muscle composition. However, genetics determine the proportion of fast-twitch fibres and slowtwitch fibres in the muscles and training cannot alter it.

- **3.** Briefly discuss at least three physiological factors that determine strength.
- Ans. The three physiological factors that determine the strength are:
 - Size of the muscle: Size is an important determinant of strength. Larger muscles can exert greater amount of force than smaller ones. It has been noted that while the same amount of force is produced by the male and female muscles of the same type, males are stronger because their muscles are larger, and thus more powerful. Weight training increases the size of muscles and is used as an effective method of strength training.
 - **Point of tendon insertion:** Muscles strength can also vary with difference in the point of tendon insertion.
 - **Body weight:** We often see that participants in the heavyweight category lift greater weight than those in the lightweight category. Therefore, heavier persons are stronger than those who are lighter.
 - 4. Discuss at least three physiological determinants of speed.
- Ans. The three physiological determinants of speed are:
 - Mobility of the nervous system: The nervous system excites and inhibits the motor centres associated with contraction and relaxation of the related muscles at the highest possible speed. This process is called mobility of the nervous system. After the limited few seconds during which the nervous system enables these excitations and inhibitions, tension spreads all over the body due to the activity. Consequently, the speed decreases. This mobility is greatly affected by genetics and can be trained only to a certain degree.
 - **Muscle composition:** Muscles with higher percentage of fast-twitch fibres contract with greater speed than those with a low percentage. Genetics determine their percentage and so it cannot be altered by any amount of training. Also, fast-twitch fibres

exist in varying quantities in different types of muscles. That is why, different parts of the body react with different speeds.

- Flexibility: It is the possible range of movement in a joint or a series of joints. Increase in flexibility assists the performance of the highest range of movement with the least internal resistance. Therefore, flexibility has a mild influence on speed. It also helps to maximise the implementation of explosive strength.
- 5. Discuss at least three physiological determinants of flexibility.
- Ans. The three physiological determinants of flexibility are:
 - Extensibility of muscles: Different ranges of movements are aided by muscles, their extensibility is another factor limiting flexibility. Muscles contract to make movements at the joints. Without proper and consistent stretching, muscles become stiff and lose their extensibility, and therefore, cause reduced flexibility. It can be trained to a certain degree to improve flexibility.
 - **Previous injury:** Flexibility is adversely affected by injuries to connective tissues and muscles. Deposition of excess fibrous tissue takes place in the affected area, making them thick and resistant. These tissues are less elastic and cause limb shortening. As a result flexibility is decreased.
 - Age and gender: Flexibility naturally decreases with age. It is partly due to degradation of the fibrous connective tissues that support, surround and bind muscle fibres, decrease in cartilage and the lubricant synovial fluid. Because of longer and more elastic muscles, women are more flexible than men.
 - 6. Write about physiological factors determining endurance. (CBSE 2019)
- Ans. The three physiological determinants of endurance are:
 - Lactic acid tolerance: This is an efficient predictor of endurance capacity. It is the ability to tolerate accumulation of lactic acid, especially during activities spanning 40 seconds or more. This accumulation is due to imbalance in formation and removal of lactic acid in the body. Endurance can be improved by enhancing lactic acid tolerance with proper training.

- **Movement economy:** Saving energy is always advantageous in endurance sports, to maintain the level of performance throughout the whole activity. Economical movements minimise energy consumption. This enables one to make precise movements and reduce unnecessary movements.
- **Muscle composition:** Muscles have two types of fibres, namely, fast-twitch and slow twitch fibres. Slow-twitch fibres exert a small force and maintain it for a long time. That is why, higher percentage of slow-twitch fibres is ideal for endurance activities. However, this percentage is determined by genetic factors.
- **7.** Briefly explain the effects of exercise on cardiorespiratory system.
- **Ans.** By doing exercise regularly for a long time the cardio-respiratory system undergoes a certain process of adaptations known as long-term effects of exercise. These are listed below:
 - · Increase in the size of heart
 - Decrease in resting heart rate
 - Stroke volume increases at rest
 - Increased blood flow
 - Decrease in blood pressure
 - Increase in blood volume
 - Quick recovery rate
 - Reduced risk of heart diseases.
 - 8. Create a mind map including six effects of exercise on muscular system.

Ans. Mind Map:

9. Create a flowchart to explain classification of sports injuries.

Ans. Flow Chart:

10. Make a table explaining any three types of sports injuries including their classification, causes, prevention and treatment.

Type of Injury	Classification	Causes	Prevention	Treatment
Sprain	Soft Tissue Injury	Sudden twisting or stretching of a joint	Proper warm-up, wearing appropriate footwear, maintaining good flexibility and strength	Rest, ice, compression, elevation, physical therapy, surgery (in severe cases)
Strain	Soft Tissue Injury	Overuse, repetitive motion, or sudden trauma to a muscle or tendon	Proper warm-up, stretching, gradually increasing intensity and duration of activity, using proper technique	Rest, ice, compression, el- evation, physical therapy, surgery (in severe cases)
Abrasion	Skin Injury	Friction or scrap- ing against a rough surface	Wearing protective cloth- ing, using proper equipment, maintaining playing surfaces	Cleaning the wound, applying an antiseptic, covering with a sterile bandage

Ans. Here is a table explaining three types of sports injuries, their classification, causes, prevention and treatment:

- **11.** Define the five types of soft tissue injuries.
- Ans. Contusion, strain, sprain, abrasion, laceration, incision, hematoma are the types of soft tissue injury.

Contusion is a muscle injury caused by a blow to the skin, such as getting hit or bumping against something which leads to ruptured blood vessels. The affected area becomes red, then blue and then purple.

Laceration is the tearing of skin which results in an irregular cut. It is caused of injury with a sharp sports equipment. Incision is a smoothly–cut skin wound made by a sharp sport equipment, spike, etc.

Abrasion is a superficial injury to the skin when something rubs against it. It does not penetrate deeper than the epidermal layer of the skin. Friction between skin and hard or rough surface leads to abrasion. **Strains** are caused by excessive use or forced stretching of the muscles or tendons. There may be complete tearing of muscles or tendons. Strains are common in contact sports such as boxing, football, hockey, wrestling, etc.

Sprain is the result of injury to the ligaments because of overstretching or tearing. The extent of injury and the number of injured ligaments determine the severity of the sprain. Ligaments in knees, ankles, and wrists are more susceptible to sprain. Sprain may be due to falling, twisting or getting hit during training and competitions.

- 12. Draw diagram and explain the management of any two types of bone injury. (CBSE 2022)
- Ans. Refer to page 133 of the book
- **13.** Define any three types of fractures.
- Ans. Bone injuries are fractures caused by forces or pressures greater than the strength of the osseous tissue. The different types of bone

injuries are:

- (i) Simple fracture
- (ii) Compound fracture
- (iii) Complicated fracture
- (iv) Stress fracture
- (v) Green stick fracture
- (vi) Comminuted fracture
- (vii) Impacted fracture
- (viii) Transverse fracture
- (ix) Oblique fracture
- **Simple Fracture:** A broken bone in a single part of the body in the absence of of a wound is called simple fracture.
- **Compound fracture:** In this type of fracture the skin and muscles are damaged and the bone usually protrudes out of the torn skin.
- Green stick fracture: Bending of bones or a slight crack is called green stick fracture. Children are more vulnerable to this type of fracture due to underdeveloped bones.
- 14. Define the types of dislocation.

Ans. The types of dislocation are:

- **Dislocation of the jaw:** This injury impacts one or both of the joints connecting the lower jaw to the skull. These joints, also called the temporomandibular joint (TMJ) may break, crack or even become entirely separated from the skull. It may be caused when the chin forcefully strikes another object, or when the face is hit by a strong external force.
- **Dislocation of shoulder joint:** In this type of dislocation, the ball of the humerus comes out of the socket. This may be caused by extreme rotation of the shoulder joint, or when the joint is hit by a sudden blow or is impacted by a fall against a hard surface.
- **Dislocation of hip joint:** A hip dislocation occurs when the head of the thigh bone (femur) is forced out of its socket in the hip bone (pelvis). This happens only in cases where the body comes into contact with a powerful force, such as falling from a significant height onto a hard surface.
- **Dislocation of the wrist:** It is dislocation of any of the eight carpal bones making up the wrist. This may happen when the carpal bones, which are small bones, are hit or come into contact with another force which is too great.

- 15. Describe four causes of sports injuries.
- Ans. The four causes of sports injuries are:
 - **Poor training methods and duration:** One of the leading causes of injury is poor training. Unhealthy methods, long period of training sessions without rest lead to injuries during training and competitions. Undertraining is as harmful as overtraining.
 - Lack of preparation: If players do not prepare themselves properly, they are liable to get injured. They are not conditioned to face the challenges and to use the right techniques while performing. Therefore, they get easily hurt if both their body and mind are not prepared well in advance.
 - **Improper warming-up:** Without a proper warming-up routine, players are likely to injure themselves because their bodies are less flexible in the beginning after a period of inactivity. So, warming-up is absolutely necessary before a training session and competitions.
 - Lack of good sports facilities: Insufficient and poor sports facilities increase the risk of injuries among players. Hazardous sports environment leads to many injuries such as abrasion, sprain, fractures and so on.
 - 16. Give five tips for preventing sports injuries.
- Ans. The five tips for preventing sports injuries are as follows:
 - Do not train if you are feeling fatigued.
 - During heavy training, include more carbohydrates in your diet.
 - The more you train, the more you should rest.
 - Stop any exercise or activity if you feel pain.
 - Take proper time for warming-up and cooling down.
 - 17. How can abrasion be treated?
- Ans. Abrasion:
 - The first step is to wash the injured area with cold water, followed by application of an antiseptic.
 - In case of a serious abrasion light dressing should be done to speed-up the process of recovery.
 - Anti-tetanus injection should be given. Painkillers may also be given if patient experiences severe pain.

18. How can sprain be treated?

Ans. Sprain:

- First the injured part should be kept in a comfortable and elevated position and cold compression applied for 10 to 20 minutes. This should be repeated 6 to 8 times a day.
- Warm water can be applied after 2 or 3 days at least 3 to 4 times a day, and a light massage given to the affected area.
- If it is ankle sprain then a bandage should be tightly applied in the shape of the figure '8'.
- 19. How are contusions treated?

Ans. Contusions:

- The first step is to apply cold compression on the injured area for a duration of not less than 40 minutes. This should be repeated 5 to 6 times daily.
- Anti-inflammatory medicine should be given in case of swelling. If swelling persists expert medical help should be sought.
- Flexibility exercises will help during rehabilitation.
- 20. How are lacerations treated?
- Ans. Lacerations:
 - The first and foremost step is to stop the bleeding by applying pressure on the laceration and holding it above the heart level for 15 minutes. Pressure points also may be used if bleeding persists.
 - After the bleeding stops, wash the area with lukewarm water and mild soap or antibacterial cleansers. Repeat step 1 if it bleeds again.
 - In minor cases, stitches are not required and it can be treated by applying an antibiotic ointment and covering it up with a bandage.
 - In deep laceration, stitches are necessary to close the wound and join the torn skin, muscle, and tissue, again.
 - A surgical drape or sterile gauze should be placed over the wound and taped.
 - Change the dressing regularly and clean the wound each time.
 - Give antibiotic medicines and painkillers if prescribed by the doctor.
- 21. How are incisions treated?
- Ans. Incisions:
 - If the wound is shallow, let the blood come out because this removes germs from the wound as well.

- Clean the wound and surrounding areas with iodine tincture or spirit.
- Place a piece of cotton on the area and wrap it with a bandage to keep away dirt and germs.
- Keep the bandage tight if there is excessive bleeding.
- Get medical help immediately.
- 22. How are strains treated?
- Ans. Treatment of strain should be done using the PRICE method. It is important to take precautions to avoid heat during the first 72 hours after the injury, such as hot baths, sauna baths or heat packs, etc. Running or exercising should be avoided
 - 23. Explain PRICE procedure as a treatment for soft tissue injury. (CBSE 2020)
- Ans. For PRICE procedure as a treatment of soft tissues injuries, refer to page 138 of the textbook.
 - 24. How can dislocation be treated?
- Ans. Initial care and treatment for any dislocation involves PRICE (Protection Rest, Ice, Compression and Elevation). After this treatment, sometimes the dislocated joint might naturally go back into place. The application of ice immediately after injury to the injured area checks internal haemorrhage aiding in keeping the clot organization as small as possible. This helps in fast repair and healing.

E. Long Answer Type Questions

- 1. Explain any four physiological factors determining strength. What are the effects of regular exercise on the muscular system? (CBSE 2020)
- Ans. Refer to page 124 and page 128 of the book
 - 2. Explain the physiological factors determining speed. (CBSE 2017)
- Ans. The physiological factors determining speed are:
 - Mobility of the nervous system
 - Muscle composition
 - Explosive strength
 - Flexibility
 - Biochemical reserves and metabolism.

(For brief explanation, refer page 133 of the textbook.)

 Discuss in detail two long term and two short term effects of exercise on cardio-respiratory system. (CBSE 2022)

Ans. The cardio-respiratory system is responsible for supplying oxygen to the body and removing carbon dioxide. Regular exercise has both short-term and long-term effects on this system. Here are two of each:

Short-term effects:

- **Increased heart rate:** During exercise, the heart rate increases to pump more blood and oxygen to the muscles. This increases the heart's efficiency and allows it to pump more blood with fewer beats.
- Increased breathing rate: Exercise increases the breathing rate to deliver more oxygen to the body and remove carbon dioxide. This helps to improve lung function and increase the amount of oxygen that is available to the muscles.

Long-term effects:

- Improved cardiovascular health: Regular exercise helps to improve the health of the cardiovascular system by strengthening the heart and blood vessels. This can reduce the risk of heart disease, stroke, and other cardiovascular conditions.
- Increased aerobic capacity: Aerobic capacity refers to the body's ability to use oxygen to produce energy. Regular exercise can increase the body's aerobic capacity by improving the function of the heart, lungs, and muscles. This allows the body to perform physical activities with less effort and fatigue.

Overall, regular exercise is beneficial for the cardio-respiratory system, both in the short and long term. It can help to improve heart and lung function, increase oxygen delivery to the muscles, and reduce the risk of cardiovascular diseases.

- 4. What is the effect of exercise on cardiorespiratory and muscular system? (CBSE 2020)
- Ans. The effects of exercise on the cardiorespiratory system are as follows:
 - Increase in heart rate;
 - Increase in stroke volume;
 - Increase in cardiac output;
 - Increase in blood flow;
 - Increase in blood pressure.

(For brief description of each point, refer pages 129–130 of the textbook.)

The effects of exercise on the muscular system are that it:

- Changes in anatomy of the muscles;
- Increases in number of capillaries;
- · Improves the strength of connective tissues;
- Improves the efficiency;
- Delaying fatigue;
- Activation of the non-functioning fibres;
- · Correct body posture;
- Improvement of reaction time.

(For brief explanation, refer page 128-129 of the textbook.)

5. What is endurance? Explain the various methods for its development.

(CBSE 2014, 2020, 2022)

Ans. Endurance is the ability to resist fatigue and sustain an activity for a long duration of time. It is determined by the physiological factors like aerobic capacity which means oxygen intake, oxygen transport, oxygen uptake, energy reserves, and secondly lactic acid tolerance, thirdly movement economy and finally muscle composition.

(Refer pages 126-127 of the textbook.)

- 6. Discuss the types of soft tissue injuries in detail.
- Ans. Soft tissue injuries include:
 - **Contusion:** it is a muscle injury caused by a blow to the skin, such as getting hit or bumping against something, which leads to ruptured blood vessel. Such an injury can occur with or without the involvement of sports equipment.
 - Strain: Strains are caused by excessive use or forced stretching of the muscles or tendons. They can be minor or severe depending on the nature of the injury. Strains are also known as 'torn muscle', 'muscle pull' and 'ruptured tendon'. These can be classified as:
 - Acute strain/Overstress and
 - Chronic strain/Overuse.
 - It can be of varying degrees like:
 - First degree,
 - Second degree and
 - Third degree.
 - **Sprain:** It is the result of injury to the ligaments because of overstretching or tearing. The extent of injury and the number of injured ligaments determine the severity of the sprain. It can due to falling, twisting or getting

hit during training and competitions. It can be accompanied by a fracture causing swelling, inflammation, severe pain and tenderness in the affected area.

- Abrasion: It is a superficial injury to the skin when something rubs against it. It can be of various degrees like First degree, Second degree and finally of Third degree.
- Laceration: It is the tearing of skin which results in an irregular cut. It is caused by injury with a sharp sports equipment. Lacerations are generally seen in skating, basketball, fencing, etc.
- **Incision:** It is a smoothly-cut skin wound made by a sharp sport equipment, spikes, etc. In this type of cut, usually blood comes out freely.
- **Hematoma:** It is caused due to internal tissue rupture where there is a large collection of blood. It is also known or internal blood clotting.
- Contusion and dislocation are common sports injuries. Write in detail about the symptoms and management of these injuries. (CBSE 2019)
- Ans. Contusion: it is a muscle injury caused by a blow to the skin, such as getting hit or bumping against something, which leads to ruptured blood vessel. Such an injury can occur with or without the involvement of sports equipment.

Management of Contusion:

- The first step is to apply cold compression on the injured area for a duration of not less than 40 minutes. This should be repeated 5 to 6 times daily.
- Anti-inflammatory medicine should be given in case of swelling. If swelling persists expert medical help should be sought.
- Flexibility exercises will help during rehabilitation.

Dislocation: Dislocation of joints is mainly caused by sudden trauma causing the joint to go beyond its limits. Forceful impact between the body and another player or equipment, a hard surface may cause dislocation of joints and associated bones. Dislocation can occur at any major joint like shoulders, knees, or minor joint like toes, fingers, etc.

Management of Dislocation: In bone injuries, initial care and treatment for dislocation involves RICE (Rest, Ice, Compression and Elevation). After this treatment, sometimes, the dislocated

joint might naturally go back into place. The application of ice immediately after injury to the injured area checks internal haemorrhage aiding in keeping the clot organization as small as possible. This helps in fast repair and healing. For small joints, compression and cold must be maintained for at least an hour and for larger joints up to 24 hours. Depending on the extent of injury, fixation and support should be for a duration of 2 days to 3 weeks. Massage should be avoided for 2 days to ensure proper haemorrhage control. While taking the patient to the physician for evaluation, the injury should be properly splinted and supported to prevent any further damage to the area.

8. Classify sports injuries. Explain PRICE procedure as a treatment of soft tissue injuries.

(CBSE 2017)

Ans. Sports injuries can be classified into the following depending upon their cause and locations.

Depending on their causes:

- Direct injury is an injury incurred where the body makes contact with an external force.
- Indirect injury is an injury caused by force inside the body like excess strain on muscles and ligaments.
- An overuse injury occurs when specific parts of our body are used over a period of time, especially when the movements are repetitive.

Depending upon the location:

- Soft tissue includes all muscles, ligaments, tendons, skin, organs, etc.
- Bone injuries are fractures caused by forces or pressure greater than the strength of the osseous tissue.
- Joint Injuries to any point in the body is joint injury and dislocation is one of the most common joint injuries.

(For PRICE procedure as a treatment of soft tissues injuries, refer to page 138 of the textbook).

- 9. What do you understand by fracture? How can fracture be classified? Explain. (CBSE 2019)
- Ans. Bone injuries are fractures caused by forces or pressures greater than the strength of the osseous tissue. The different types of bone injuries are:
 - Simple fracture: A broken bone in a single part of the body in the absence of a wound is called simple fracture.

- Compound fracture: This type of fracture is accompanied by damage to the muscles and skin and the bone usually protrudes out of the torn skin.
- Complicated fracture: Along with the bones, other parts of the body also get damaged in a complicated fracture. It is a serious and dangerous type of injury.
- Green stick fracture: Bending of bones or a slight crack called green stick fracture.
- Comminuted fracture: It is a type of fracture in which bones break into or more pieces.
- Impacted fracture: In this type of fracture, shattered or fragmented pieces of a broken bone enters into another bone under the influence of an impact.
- **10.** Make a table on the types of fractures and their treatment.

Ans.	Here is a table on different types of fractures and their
	treatment options:

Type of Fracture	Description	Treatment
Simple fracture	The bone is broken but does not break through the skin	Immobilisation with a cast, splint, or brace, pain medication, physical therapy
Compound fracture	The broken bone protrudes through the skin, increasing the risk of infection	Emergency care to prevent infection, surgery to clean the wound and stabilise the bone, immobilisation with a cast, splint, or brace, pain medication, physical therapy
Complicated fracture	The broken bone damages surrounding tissues, such as nerves and blood vessels	Emergency care to prevent further damage, surgery to repair the bone and surrounding tissues, immobilisation with a cast, splint, or brace, pain medication, physical therapy
Stress fracture	A small crack in the bone caused by overuse or repetitive motion	Rest, immobilisation with a cast, splint, or brace, pain medication, physical therapy
Greenstick fracture	The bone is bent but not completely broken, most common in children	Immobilisation with a cast, splint, or brace, pain medication, physical therapy
Comminuted fracture	The bone is broken into multiple pieces	Surgery to realign and stabilise the bone, immobilisation with a cast, splint, or brace, pain medication, physical therapy

Impacted fracture	The broken ends of the bone are driven into each other	Immobilisation with a cast, splint, or brace, pain medication, physical therapy
Transverse fracture	The break is straight across the bone	Immobilisation with a cast, splint, or brace, pain medication, physical therapy
Oblique fracture	The break is at an angle to the bone	Immobilisation with a cast, splint, or brace, pain medication, physical therapy

- 11. Write in detail about the dislocation and fractures among the bones and joint injuries. (CBSE 2016)
- Ans. Dislocation of the jaw: This injury impacts one or both of the joints connecting the lower jaw to the skull. It may be caused when the chin forcefully strikes another object, or when the face is hit by a strong external force.
 - **Dislocation of shoulder joint:** In this type of dislocation, the ball of the humerus comes out of the socket. This may be caused by extreme rotation of the shoulder joint or when the joint is hit by a sudden blow or is impacted by a fall against a hard surface.
 - **Dislocation of hip joint:** A hip dislocation occurs when the head of the high bone is forced out of its socket in the hip bone.
 - **Dislocation of the wrist:** It is dislocation of any of the eight carpal bones making up the wrist. This may happen when the carpal bones, which are small bones, are hit or come into contact with another force which is too great.
- **12.** Describe in detail the causes of sports injuries.
- Ans. The causes of sports injuries are:
 - Poor training methods and duration
 - Lack of preparation
 - Improper warming-up
 - Lack of scientific knowledge
 - · Lack of fitness
 - Nutritional deficiency
 - · Lack of good sports facilities
 - Injudicious officiating
 - Improper warming up
 - Lack of scientific knowledge
 - Lack of fitness
 - Nutritional deficiency
 - · Lack of good sports facilities

- Injudicious officiating
- No use of protective equipment
- · Lack of proper rest
- Pressure of competition
- Carelessness during sporting activities
- Recurrence of injury and overuse of muscles

(For detailed description of each point, refer to pages 134–135 of the textbook.)

- **13.** What are the preventive measures that can be taken in case of sports injuries? (CBSE 2013)
- Ans. One can take the following preventive measures in sports injuries:
 - Proper warming-up
 - Proper conditioning and preparation
 - Balanced diet
 - Proper knowledge of sports skills
 - Use of protective equipment
 - Proper sports facilities
 - · Impartial/Unbiased officiating
 - Avoiding overtraining
 - Use of proper technique
 - Obeying the rules
 - Proper cooling down

(For detailed description of above points, refer pages 136–137 of the textbook.)

14. Write a detailed note on the treatment of soft tissue injuries.

Ans. Treatment of soft tissue injuries:

The soft tissue injuries include like managements of abrasion, contusion, laceration, incision, sprain, and strain.

Abrasion: Firstly rinse and cleaned the area with cool or lukewarm freshwater and antibacterial cleaners. Gently, remove dead tissues, dirt or debris with sterile gauze. The further process of holding under the running water, drying and dressing it.

Contusion: Cold compression is applied on the affected area, if swelling is more than usual, anti-inflammatory medicines are given and the rehabilitation process is done with light flexibility.

Laceration: It is the first and foremost duty to stop the bleeding by applying pressure tactics holding it above the heart level, to wash the bleeding when it stops.

Incision: Let the blood come out if the wound is shallow, clean the wound and surrounding areas, place a piece of cotton on the wounded area and wrap it with a bandage, keep the bandage tight and get medical help immediately if the incision is too deep.

Sprain: PRICE which includes Protection, Rest, Ice, Compression Elevation is crucial in every injury, and the MICE method which includes Mobilisation, Ice, Compression, Elevation, etc. be applied for soft tissue injuries as per their locations.

Strain: It should be managed by doing the PRICE method.

- 15. How are bone injuries treated?
- Ans. In bone injuries, initial care and treatment for dislocation involves RICE (Rest, Ice, Compression and Elevation). After this treatment, sometimes, the dislocated joint might naturally go back into place. The application of ice immediately after injury to the injured area checks internal haemorrhage aiding in keeping the clot organization as small as possible. This helps in fast repair and healing. For small joints, compression and cold must be maintained for at least an hour and for larger joints up to 24 hours. Depending on the extent of injury, fixation and support should be for a duration of 2 days to 3 weeks. Massage should be avoided for 2 days to ensure proper haemorrhage control. While taking the patient to the physician for evaluation, the injury should be properly splinted and supported to prevent any further damage to the area.
 - **16.** Sprains and strains are most common sports injuries. Write in detail about these soft tissue injuries and their treatment.

Ans. Sprain:

- **PRICE:** Stands for Protection, Rest, Ice, Compression and Elevation.
 - Protection: The injured area should be protected from further damage immediately using splint and supporting or protecting the feet with shoes or lace-ups.
 - Rest: One should avoid the practice of moving the injured part constantly and should not start doing exercise or other activities before the injury is completely healed.
 - Ice: Apply ice as early as possible. Packed in plastic bags or a clean cloth on the injury for 15–20 minutes. It reduces bleeding,

swelling and pain by decreasing blood circulations.

- Compression: Wrap the injury starting from the furthest injured part to the main injured part by using an elastic bandage or compression strap.
- **Elevation:** Elevate the injured part to reduce the swelling by using pillows above the heart level. These are based on the cause.
- **MICE** After the symptoms of inflammation subside, the procedure of MICE should be followed until the injury is healed.
 - Mobilisation: It should be started with moderate and light exercises to restore the normal range of movement of the injured part and avoid wasting of muscles.
 - Ice: Ice application should be continued for about a week depending on the severity of the injury. Heat treatment may be applied for increasing blood circulation.
 - **Compression:** It should be continued for a few days on the nature of injury.
 - **Elevation:** This should be continued until swelling and inflammation subside.

Strain: Management of strain should be done using the PRICE method. It is important to take precautions to avoid heat during the first 72 hours after the injury, such as hot baths, sauna baths or heat packs, etc. Running and exercising should be avoided as well during this period. In severe cases, physiotherapy should be included to restore muscular strength and range of movement to their normal state.

F. Value-Based Question

A famous cricket star Phillip Hughes was struck behind the ear by a ball while batting and died two days after the injury. He was wearing a helmet but the possible reason mentioned was that even when using a helmet, possibly a significant part of the neck remained exposed and the ball hit him there. And now most of the top cricketers across the world use deeper protection.

Answer the following questions based on the above passage:

- 1. Do you feel protective gears are important? Lay stress on your views.
- What first aid should be provided during injury at the superficial layer of the skin? (CBSE 2017)
- Ans. 1. Yes, the protective gears are very important for the reason that it might injure any of the body part most significantly the head, face jaws neck. Therefore, one needs to have protective measures to be on the safer side.
 - 2. The first aid should be provided during injury at the superficial layer of the skin.
